| LAND COVER: |
| SITE: Deciduous woodland dominant, with bracken & weeds ensuring complete ground cover. Part of site in field is improved grassland. |
| HALO: Half is improved grassland, other half of halo is deciduous woodland (as above). Stone wall & fence separate the field (improved grassland) from the woodland. |

C

LAND MANAGEMENT:

SITE:

HALO:

Woodland - evidence of recent tree cutting i.e. tree stumps & brash. Several feld containers for game, plenty of pheasants seen. Woodland is managed for shooting purposes, & conservation. Several young trees in wood, established by natural regeneration. Improved grassland - well managed appearance, not over or under grazed, some sheep grazing.

D

DESCRIPTION/CONDITION OF MONUMENT:

Difficult to locate, & due to thickness of ground vegetation, brash & trees, difficult to ascertain the condition of the monument. Several stones up to 1/2 m above ground level were located, but their line broken by the undergrowth & trees. Therefore, difficult to describe monument & its condition.

E

POTENTIALLY THREATENING FACTORS: (see Table 1)

1. Burrowing by rabbits - several holes seen.
2. Root damage by trees
3. Tree/scrub removal by uprooting
4. Tree windthrow
5. Scrub encroachment.

SUPPLEMENTARY NOTES TO FIELD SURVEYS **PAGE** **OF** **PRN:** 1212

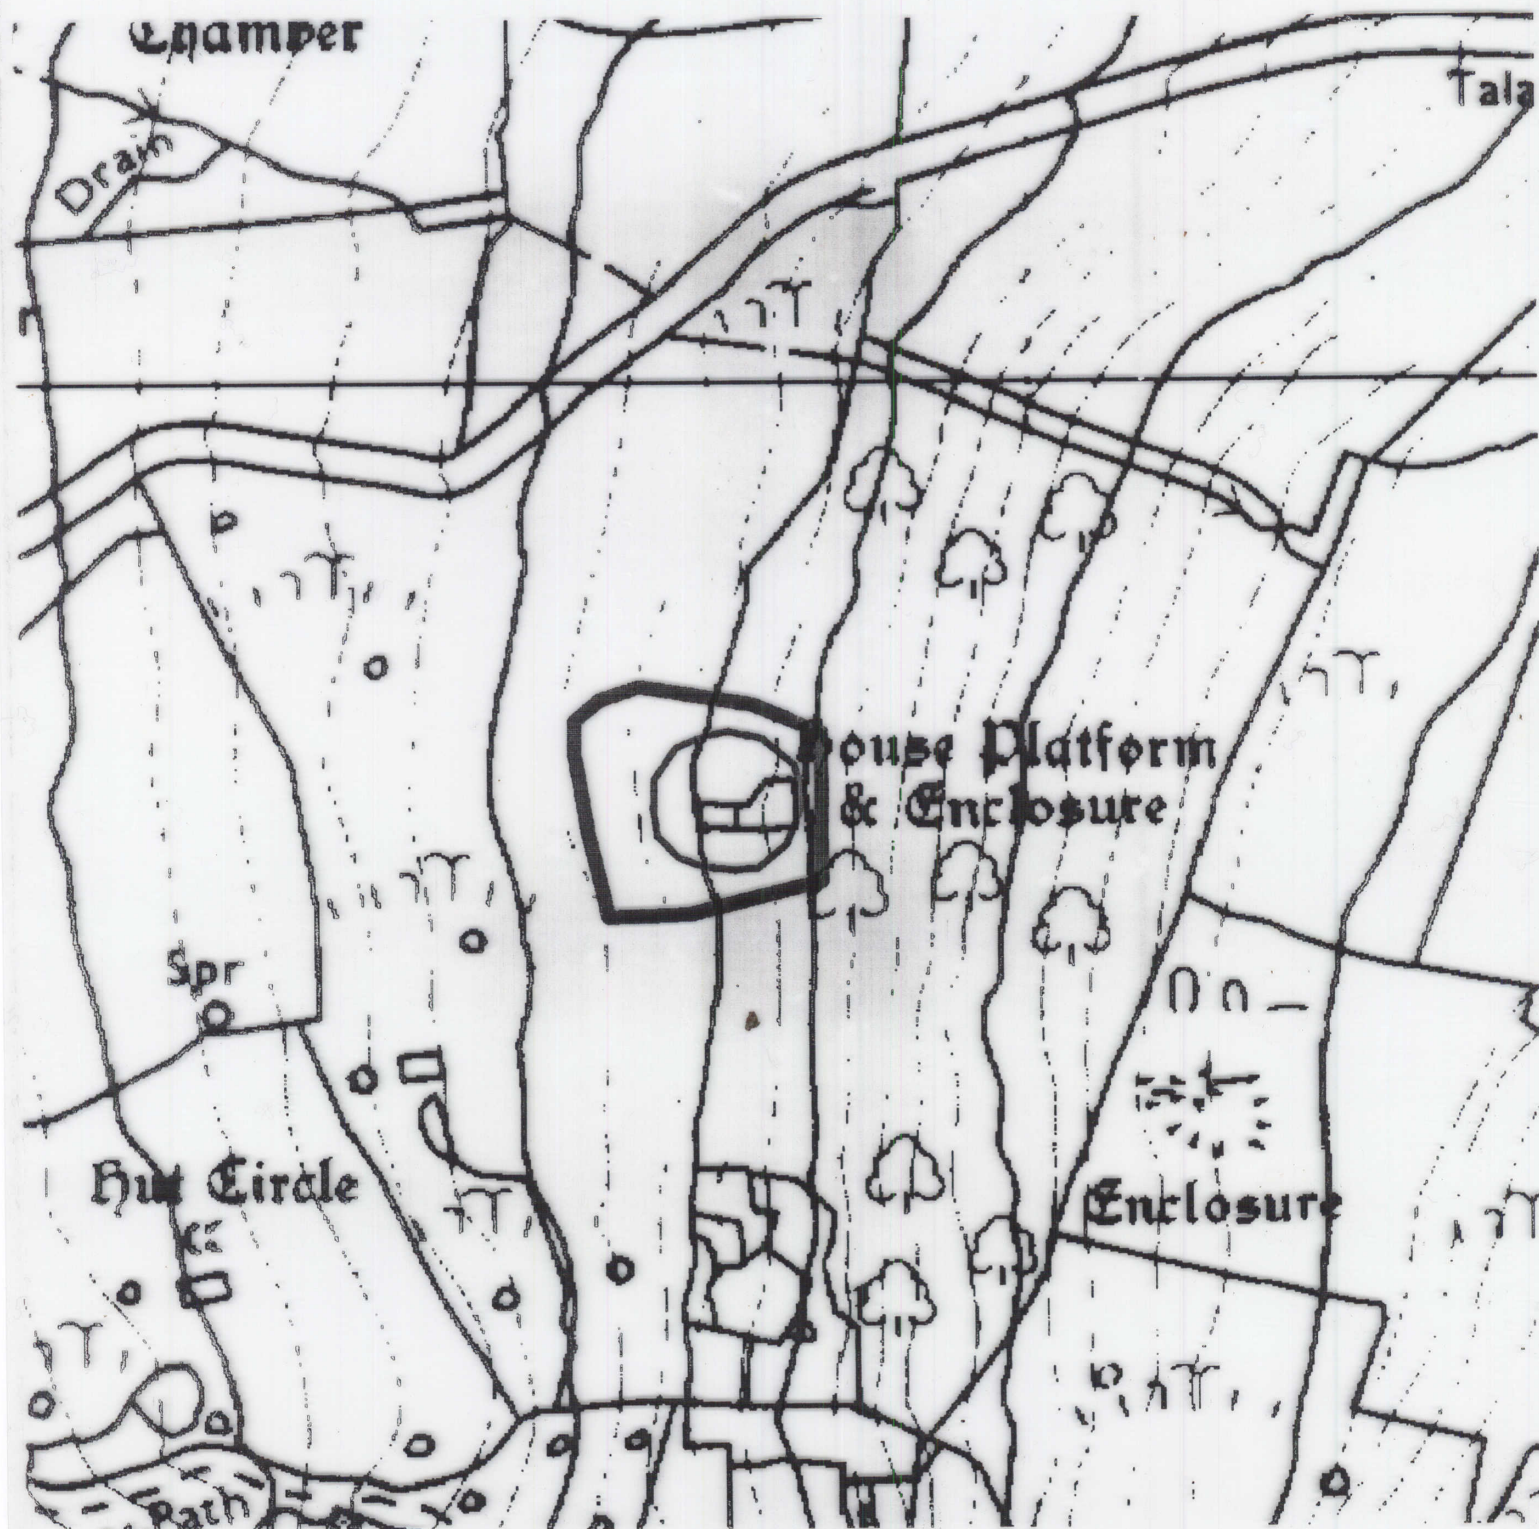

Site managed as a shooting/conservation
woodland, & as expected thick undergrowth
covers the monument (most of it). As a
feature the monument cannot all be seen.

AS AT ORIGINAL SURVEY, EXCEPT NO MORE TREES CUT DOWN (ie, no evidence of 'fresh' tree stumps). HOWEVER, SOME TREES HAD BEEN BLOWN DOWN BY WIND.

THE IMPROVED AREA WAS GRAZED BY SHEEP DURING VISIT (at an adequate stocking density), HOWEVER, MORE NETTLES AND THISTLES WERE PRESENT
(see 12:12:01 - original & resurvey).
