C

LAND MANAGEMENT:

SITE: } No livestock in field during visit.
 } Appears adequately grazed, would not
HALO: } be cut for hay or silage due to
 } undulating surface & the occasional
 } rocky boulder scattered throughout the field.
Management appears to be satisfactory.

D

DESCRIPTION/CONDITION OF MONUMENT:

Talked to Farmer's father who told me that the stones (apparently there was more than one) were lifted & placed in the adjacent hedgerow several years ago as they were an obstruction (see map & photographs) to farming operations.

E

POTENTIALLY THREATENING FACTORS: (see Table 1)

The removal of the monument from its standing position to its current sideways position in the hedgerow. The damage has already taken place.
A significant amount of cattle poaching, unlikely to lead to erosion.
