C

LAND MANAGEMENT:

SITE: Monument is fenced off from surrounding fields and is not being used for any agricultural purpose. Dense cover of scrub and rough, tussocky grass.

HALO: Surrounding field used for grazing livestock. beef cattle present when visited. Continuous cover of grass - appears well managed.

D

DESCRIPTION/CONDITION OF MONUMENT:

A circular mound with a central depression. The appearance is of a donoughut with a piece missing from one side. The mound is about 10m in diameter with a height of between 1 and 2 m. Dense cover of scrub and grass.

Central depression and gap in one side seem to be due to removal of part of the monument at some point in the past. This does not appear

E

POTENTIALLY THREATENING FACTORS: (see Table 1)

Main immediate problems are scrub encroachment and digging by badgers / rabbits. There is a large badger set present with at least 5 entrance holes within the area of the monument. Site does not seem to be at risk from animal (livestock) or human impact although it would appear from the damage observed that removal / demolition of the

to be natural slumping or due to digging by animals. A large archaic badger set is located at the site and rabbits were also seen. Damage would appear to be considerable with much of the center of the monument having been removed.

The profile of the feature appears to have been rounded (a) but now appears as in (b)

E center of the Tumulus has occurred.
