BASELINE 1993

PRN: 1761

C

LAND MANAGEMENT:

SITE: rough grazing - seemingly only for cattle.

The land is not farmed intensively - and is not causing many problems at this level.

HALO:

As above.

D

DESCRIPTION/CONDITION OF MONUMENT:

No evidence of the site remains - The bare rock now shows through - so most of the material must have been removed.

The area is in two levels - with a slope dividing them off - above is very dry - while the lower level is wet - probably from a spring coming out of <sup>Cont</sup>

E

POTENTIALLY THREATENING FACTORS: (see Table 1)

The gorge acts as a funnel for the stock causing dense lines which converge in the top and bottom corners of the field - These two areas are prone to poaching - especially the bottom level where the soil conditions enhance the problem.

CONTINUED? YES ☒ NO ☐
