Historic Environment Feature Management Report:

Myrtle Grove Defended enclosure Customer Reference Number: A0030682 UID: 301508

© Next Perspectives. Welsh Assembly Government 2009

This management plan has been produced by Dyfed Archaeological Trust Heritage Management to inform the positive management of the identified Priority Historic Environment Feature. The identified management outcome will meet the objective for the Historic Environment Feature Targeted Layer as part of the Glastir Land Management Scheme.

PRN 3473 Name MYRTLE GROVE Period Iron Age Site Type DEFENDED ENCLOSURE NGR SN06960637

Site Description

An Iron Age defended enclosure on a north facing slope visible on aerial photographs in 1955. By 1973 the Ordnance Survey recorded a much reduced but visible bank and ditch with a simple entrance on the down slope side. At a field visit in 2006 the enclosure could be identified as a slightly dished hollow c.30m across but there was no visible trace of the bank and ditch (Murphy 2006). On recent aerial photographs (Ordnance Survey Next Perspectives 2009) the enclosure is clearly visible as a soil mark in a cultivated field. The outline of the former earthworks are shown on the most recent Ordnance Survey mapping (Mastermap 2011) mapping. It is assumed that the earthwork has been reduced in size by ploughing and cultivation over the years but that remains of the ditch will survive below ground.

Management Issues

The main management issue for this site is the continued degradation of the buried archaeological remains by ploughing and cultivation.

Desired Management Outcome

The desired management outcome is to prevent any further degradation of the buried archaeological remains and to keep them in a stable condition.

Management Actions

The following management actions are required in order to prevent further damage to the buried archaeological remains and keep them in a stable condition:

- Take the area of the enclosure, as identified on the recent mapping, out of cultivation.
- Re-seed with an appropriate mix of pasture grasses
- Establish a suitable grazing regime dependent on the total area converted to pasture.

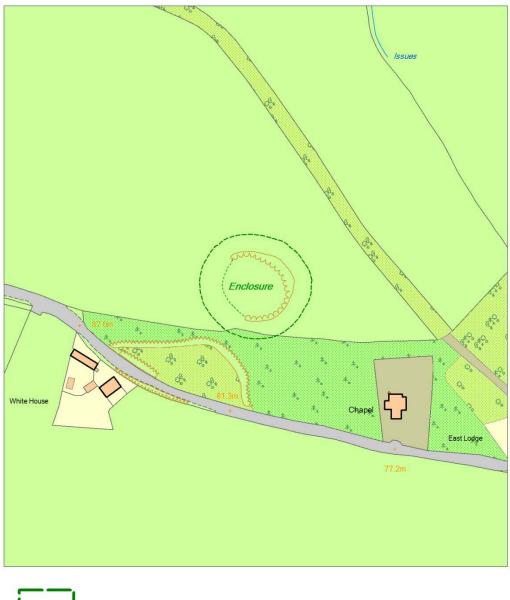

Glastir Whole Farm Code

Please also remember that, unless we have indicated otherwise, the Glastir Whole Farm Code should be observed for all historic features on your farm. The Whole Farm Code states that you must not damage any historic feature identified on your agreement map. Definitions of damage to a historic feature include ANY of the following:

- Ground disturbance or excavation especially extending beneath topsoil.
- Dumping or storage of material, including temporary storage.
- Removal of any material, including stones, soil or subsoil.
- Visible signs of active erosion (loss and disturbance of topsoil) caused by livestock and vehicles or other agricultural practice.
- Planting trees.
- Allowing scrub to develop.

- •
- Ploughing or reseeding. Displacing individual stone features. •
