

Historic Environment Feature Management Report: **Blaen-Coro cottage**

Customer Reference Number: A0027849

UID: 312916

Detail from the Ordnance Survey 1st edition map (1888) showing the settlement site. © and database right Crown copyright and Landmark Information Group Ltd (All rights reserved 08/03/2013)

This management plan has been produced by Dyfed Archaeological Trust Heritage Management to inform the positive management of the identified Priority Historic Environment Feature. The identified management outcome will meet the objective for the Historic Environment Feature Targeted Layer as part of the Glastir Land Management Scheme.

PRN 63317 Name BLAEN-CORO

Period Post-Medieval **Site Type** deserted rural settlement; cottage

NGR SN74839572

Site Description

A small, isolated building is marked at this location on the Ordnance Survey 1st edition map (1888). Present condition unknown. It is still marked on the recent Ordnance Survey mapping, and presumably survives (W.Steele, 2007) Recent aerial photographs (Ordnance Survey Next Perspectives 2009) identify the site as being within an area of scrub and tree growth (M.Ings, 2013)

Management Issues

Recent aerial photographs indicate the cottage as being ruinous and lying within a grazing area under scrub and tree growth.

The main management issue for this site is the control of damaging vegetation which has the potential to damage buried archaeological remains through the disruptive activity of root development, and built structural remains by the prising apart of masonry bonds.

Desired Management Outcome

The management outcome is to maintain the earthwork and built structural remains of the site in a stable and visible condition.

Management Actions

The following management recommendations are required in order to keep the cottage remains in a stable condition:

Tree and scrub growth

Tree and scrub growth is damaging to the long term survival of the site through the disruptive activity of root development.

- Remove mature trees which are at risk of wind throw and could threaten the site through uprooting (root plate damage) or falling limbs.
- Remove any young trees or vegetation growing out of the wall tops but cutting by hand. Do not pull-up by the roots as this is potentially destabilising to masonry bonds. Spot treat to prevent re-growth.
- Cut any scrub back by hand in order to retain the visibility of the cottages.
- If present maintain a canopy of mature trees over the settlement. This will reduce light entering the ground, inhibiting scrubby vegetation growth.

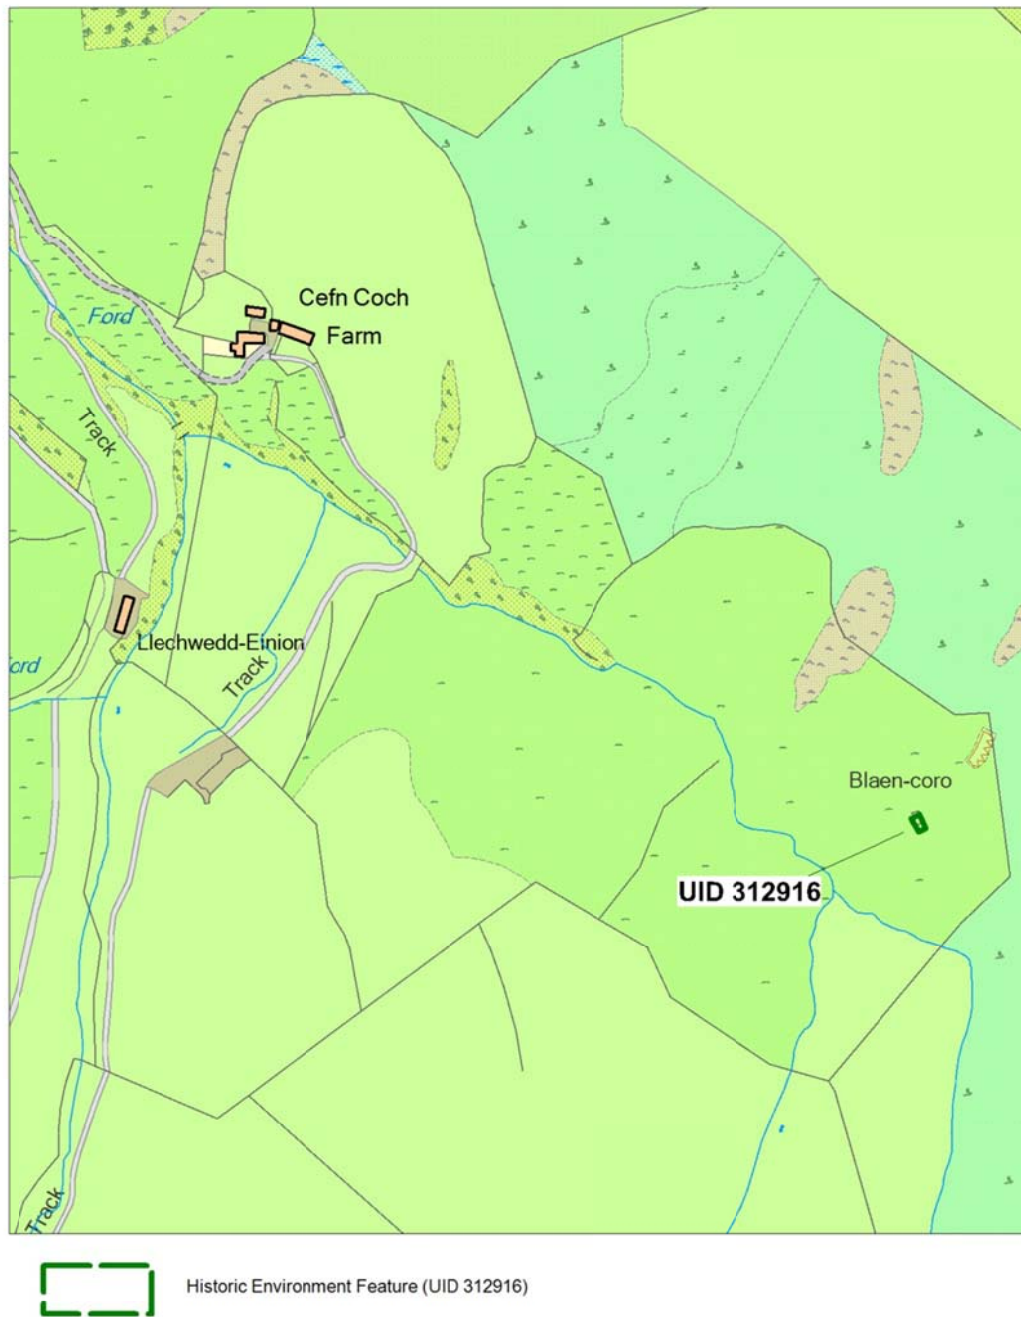

Glastir Whole Farm Code

Please also remember that, unless we have indicated otherwise, the Glastir Whole Farm Code should be observed for all historic features on your farm. The Whole Farm Code states that you must not damage any historic feature identified on your agreement map.

Definitions of damage to a historic feature include ANY of the following:

- Ground disturbance or excavation especially extending beneath topsoil.
- Dumping or storage of material, including temporary storage.
- Removal of any material, including stones, soil or subsoil.
- Visible signs of active erosion (loss and disturbance of topsoil) caused by livestock and vehicles or other agricultural practice.
- Planting trees.
- Allowing scrub to develop.
- Ploughing or reseeded.
- Displacing individual stone features.
