ymddiriedolaeth archaeolegol DYFED archaeological trust

Llywodraeth Cymru Welsh Government

This management plan has been produced by Dyfed Archaeological Trust Heritage Management to inform the positive management of the identified Priority Historic Environment Feature. The identified management outcome will meet the objective for the Historic Environment Feature Targeted Layer as part of the Glastir Land Management Scheme.

PRN 52033 **Name** Treginnis Isaf
Period Post-Medieval **Site Type** well-head
NGR SM72462391

Site Description
A well head shown on the 1st edition Ordnance Survey map (1889). It is stone built keyhole shaped structure. The most recent aerial photographs (Next Perspectives, 2009) show the structure survives in good condition. It is located at the edge of a pasture field close to a thick hedgerow which is encroaching onto the tail of the structure.

Management Issues
The main management issue is the control of invasive vegetation from the adjacent hedge which has the potential to damage built structural remains by the intrusive action of roots and the prising apart of masonry bonds. Excessive vegetation cover can also obscure the remains from view.

Desired Management Outcome

The desired management outcome is to prevent degradation of the built structural remains and to keep them in a stable and visible condition.

Management Actions

The following management actions are required in order to keep the structure in a stable and visible condition:

- Remove by hand any invasive vegetation from the structure in order to retain the visibility and stability of the structure.
- Spot treat to prevent regrowth.
- Clear and maintaina zone between the structure and the hedge line to prevent further vegetation spread

Glastir Whole Farm Code
Please also remember that, unless we have indicated otherwise, the Glastir Whole Farm Code should be observed for all historic features on your farm. The Whole Farm Code states that you must not damage any historic feature identified on your agreement map. Definitions of damage to a historic feature include ANY of the following:

- Ground disturbance or excavation especially extending beneath topsoil.
- Dumping or storage of material, including temporary storage.
- Removal of any material, including stones, soil or subsoil.
- Visible signs of active erosion (loss and disturbance of topsoil) caused by livestock and vehicles or other agricultural practice.
- Planting trees.
- Allowing scrub to develop.

- Ploughing or reseeding.
- Displacing individual stone features.
