

# Historic Environment Feature Management Report:

## Ty-clawdd, Ruined Farmstead

Customer Reference Number: A00926711

UID: 312,571

Detail from the Ordnance Survey 1<sup>st</sup> edition map (1889) © and database right Crown copyright and Landmark: Information Group Ltd (All rights reserved 08/05/2012)

This management plan has been produced by Dyfed Archaeological Trust Heritage Management to inform the positive management of the identified Priority Historic Environment Feature. The identified management outcome will meet the objective for the Historic Environment Feature Targeted Layer as part of the Glastir Land Management Scheme.

---

**PRN** 55870 **Name** TY CLAWDD  
**Period** Post-Medieval **Site Type** farmstead  
**NGR** SN7157763508

### **Site Description**

A ruined post medieval farmstead shown on the 1st edition Ordnance Survey map (1890) where it is named as Ty-clawdd. The mapping depicts a rectangular farmhouse with a barn or byre at one end and a small out building opposite. It lies within two small yard areas in a wider landscape of large regular fields. The arrangement of structures remains unchanged on all the subsequent mapping. A field visit in 2006 described the buildings as being ruinous and in the process of collapse, but still in an identifiable condition.

The surviving remains and the surrounding field pattern are typical of post-medieval enclosure, however the site may have medieval origins as it was formerly part of the holding of the Abbey of Strata Florida.

The remains at Ty-clawdd are clearly visible on aerial photographs (Next Perspectives, 2009). The current land use is unenclosed rough grazing. The ground cover is a mix of grass sward and bracken and some rushes. There are small trees and shrub growth around the standing remains.

---

### **Management Issues**

The main management issue for this site is the control of vegetation which has the potential to damage buried archaeological remains through the disruptive activity of root development, and built structural remains by the prising apart of masonry bonds. Excessive vegetation cover can provide shelter to livestock and burrowing animals, both of which can also cause damage. It also leads to archaeological features being obscured from sight.

### **Desired Management Outcome**

The desired outcome is to arrest any further damage to the standing remains and buried deposits and where possible to maintain a clear grass sward around the structures.

### **Management Actions**

The following management actions are required in order to keep the structures in a stable and visible condition:

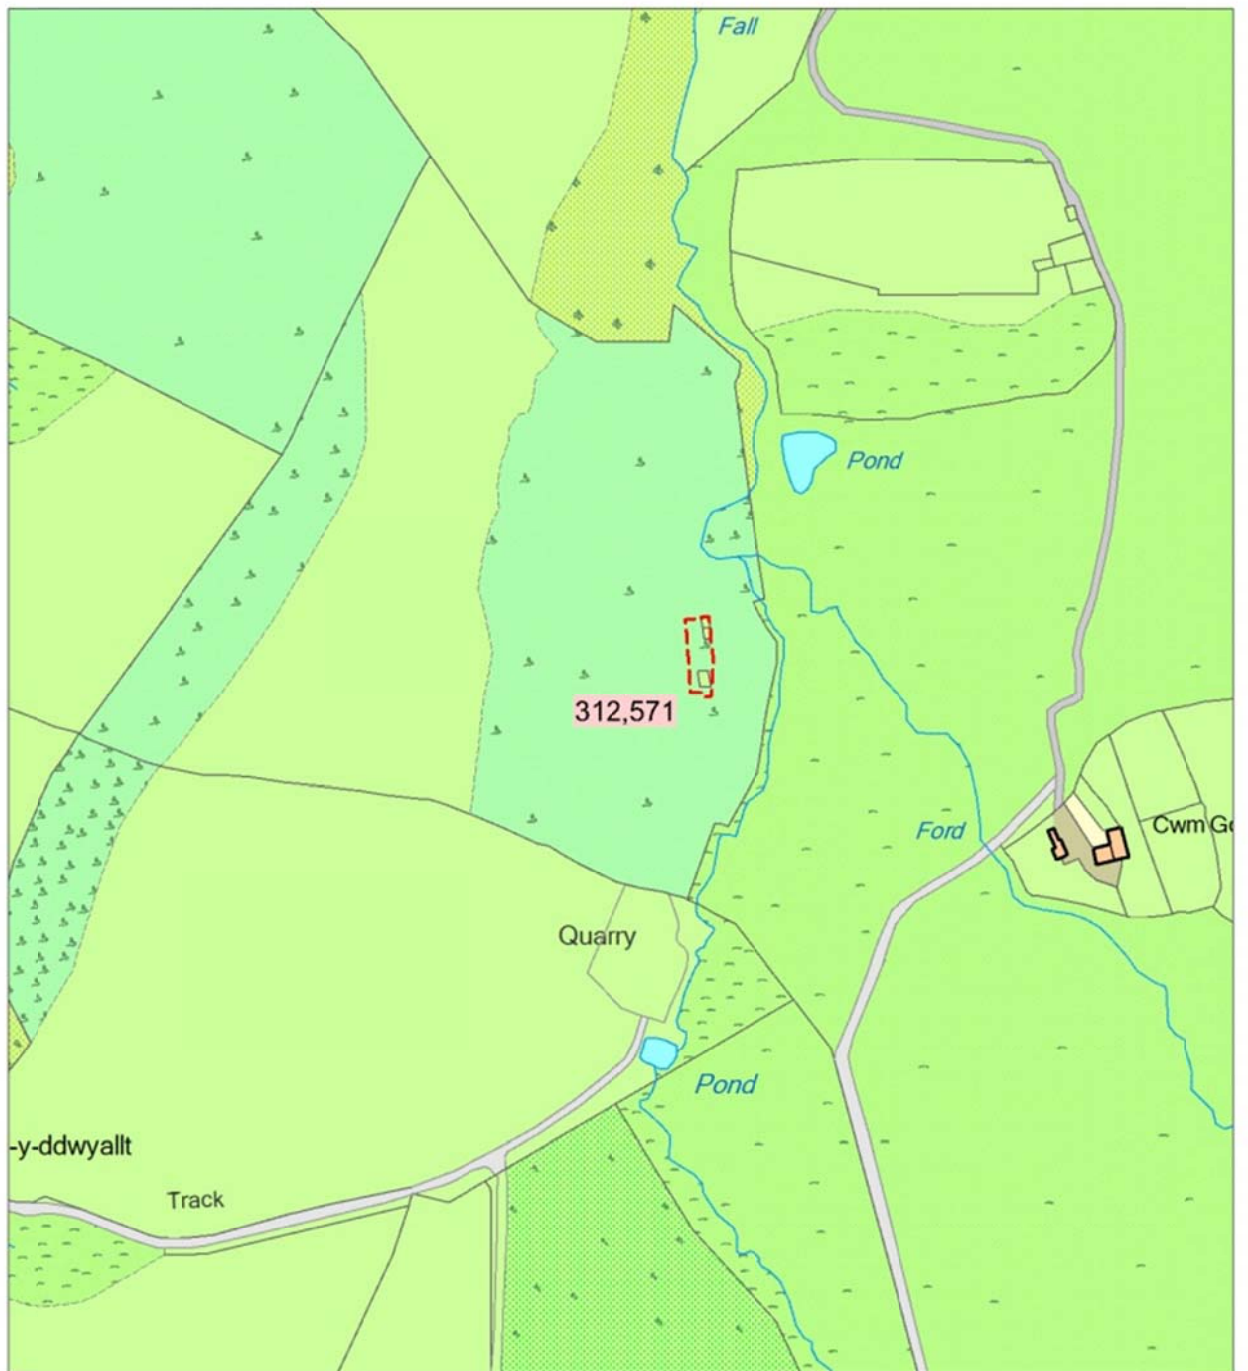

- Cut back vegetation by hand in order to prevent further damage and to enhance the visibility of the structure.
- Do not pull-up by the roots as this is potentially destabilising to masonry bonds.
- Spot treat to prevent re-growth

### **Glastir Whole Farm Code**

Please also remember that, unless we have indicated otherwise, the Glastir Whole Farm Code should be observed for all historic features on your farm. The Whole Farm Code states that you must not damage any historic feature identified on your agreement map. Definitions of damage to a historic feature include ANY of the following:

- Ground disturbance or excavation especially extending beneath topsoil.
  - Dumping or storage of material, including temporary storage.
  - Removal of any material, including stones, soil or subsoil.
  - Visible signs of active erosion (loss and disturbance of topsoil) caused by livestock and vehicles or other agricultural practice.
  - Planting trees.
  - Allowing scrub to develop.
  - Ploughing or reseeded.
  - Displacing individual stone features.
-
