2. Current Condition	
Management Issues	
3. Map of the Polygon Area Highlighting Management Issues	
4. Management Advice	
Prioritised list of management works:	
4.1 Management Works Methodology	
4.2 Long-term Management Recommendations / Best Practice	
4.3 Opportunities for Public Access and interpretation	
5. Photographs	
6. Definitive Map of the HEF Polygon Area	
7. Contractual Requirements	
7.1 Glastir - Whole Farm Code	

1. Site Description

A quarry on the south side of Butts Lane marked on 1st edition 6" & 25" OS maps of 1881 and 1875, but omitted from subsequent editions. The quarry measures c.40m by 30m and is up to 5m deep.

A lime kiln is marked on the Ordnance Survey 1869 map on the edge of the quarry. It is marked 'Old Limekiln' on the 1907 Ordnance Survey 1:2500 map

2. Current Condition

The quarry is under dense scrubby woodland. Due to the dense vegetation it was not possible to get access to the lime kiln, so its condition is unknown.

Management Issues

Vegetation growth, particularly large trees, on the lime kiln is the only management issue.

3. Map of the Polygon Area Highlighting Management Issues

N/A.

4. Management Advice

As the condition of the lime kiln is unknown then it is not possible to offer specific management advice.

Prioritised list of management works:

N/A

4.1 Management Works Methodology

The management works must be undertaken according to the guidance specified below:

Additional consultations required prior to or whilst the work is being undertaken etc.

N/A

4.2 Long-term Management Recommendations / Best Practice

N/A

4.3 Opportunities for Public Access and interpretation

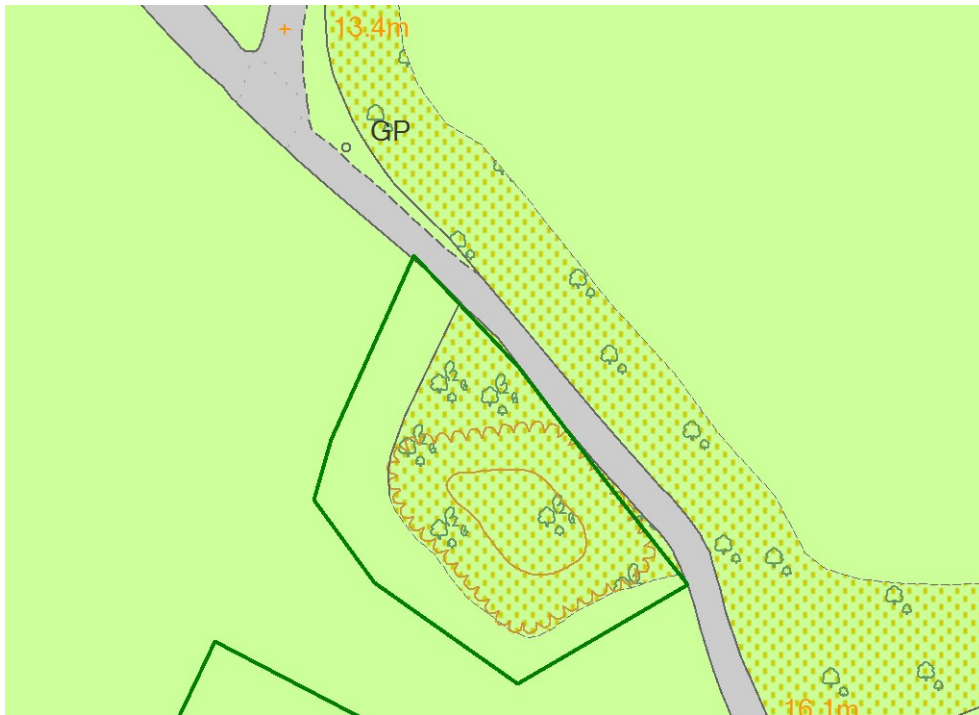

N/A

5. Photographs

Figure 1. Long view of the quarry showing its overgrown character.

6. Definitive Map of the HEF Polygon Area

7. Contractual Requirements

Some or all of the requirements detailed in the Management Plan may have been included in the Glastir Advanced contract. It is important that you read your contract before undertaking any work included in this Management Plan.

7.1 Glastir - Whole Farm Code

The Glastir Whole Farm Code states:

You must not damage any historic feature identified on your agreement map

Definitions of damage to a historic feature include ANY of the following:

- Ground disturbance or excavation especially extending beneath topsoil
- Dumping or storage of material, including temporary storage
- Removal of any material, including stones, soil or subsoil

- Visible signs of active erosion (loss and disturbance of topsoil) caused by livestock and vehicles or other agricultural practice
- Planting trees
- Allowing scrub to develop
- Ploughing or reseedling
- Displacing individual stone features

7.1 Glastir - Whole Farm Code	

1. Site Description

A possible rectilinear cropmark is visible on air photographs of the 1950's and there is a 1880 reference to a vegetation mark, but the OS record of 1965 suggests a combination of former field boundaries and scarp edge, not a site producing the cropmark. It is therefore unlikely that this is an archaeological site.

2. Current Condition

Under improved pasture. No visible remains.

7.1 Glastir - Whole Farm Code	

1. Site Description

This farmstead replaced the original New Shipping (112488) which lay 150m to the south. There is no trace of New Shipping Farm on the Ordnance Survey 1:10,560 map of 1869, but by the Ordnance Survey 1:2500 map of 1907 a farm out building had been constructed but not the house. A second outbuilding (112489) is shown midway between the old and new farmsteads on the 1907 map. The farmer in 2017 stated the house was built in 1906.

The farmstead consists of a two-storey farmhouse, with a stone outbuilding to its west. This outbuilding was originally part of a longer range, most of which has been demolished, but the north wall has been incorporated into a modern steel-frame building. The surviving part of the building is single-storey under an asbestos sheet roof. It was a cowhouse, but is now used as a workshop. Other modern, large steel-frame buildings lie to the south.

2. Current Condition

The historic farm out building is in good condition, stone built with an asbestos sheet roof. It is used as a workshop.

4.3 Opportunities for Public Access and interpretation	
5. Photographs	
6. Definitive Map of the HEF Polygon Area	
7. Contractual Requirements	
7.1 Glastir - Whole Farm Code	

1. Site Description

New Shipping farmstead is shown on the Ordnance Survey 1:2500 1886 map as a main range of buildings on the shore of Carew Pill with a secondary range at right angles. By 1907 the secondary range had gone and according to the farmer the farm was abandoned soon after. The site is now in a pocket of scrubby woodland. A few low walls of the farmstead are just visible in the undergrowth.

2. Current Condition

The site is very overgrown with scrub and self-seeded trees and any details of the former buildings are not visible. Former paddocks and gardens associated with the farm are also overgrown.

Management Issues

The main threat to the building remains is root damage caused by the trees and scrub. Several dying or dead ash trees occupy the site – root throw could cause problems in the future if these trees fall.

3. Map of the Polygon Area Highlighting Management Issues

N/A – see aerial photographs and ground photograph.

4. Management Advice

None.

Prioritised list of management works:

Removal of the dead and dying trees.

Clearance of scrub over the former buildings.

4.1 Management Works Methodology

The management works must be undertaken according to the guidance specified below:

Scrub to be cleared by hand over the building remains.

Care should be taken to avoid damage to building standing remains during removal of larger trees.

Additional consultations required prior to or whilst the work is being undertaken etc.

N/A

4.2 Long-term Management Recommendations / Best Practice

Prevent trees taking root on the building remains.

4.3 Opportunities for Public Access and interpretation

N/A

5. Photographs

7.1 Glastir - Whole Farm Code	

1. Site Description

A small roughly circular pond is marked on 19th century Ordnance Survey maps. It formerly lay on the line of a hedgebank, which has been removed. The pond is about 20m across and is now overgrown.

2. Current Condition

Water still stands in the pond, but it is surrounded by bushes and trees and is virtually inaccessible. The pond itself is choked with vegetation and is probably beginning to silt-up.

Management Issues

The main issues are the vegetation surrounding the pond making it inaccessible and that over time it will silt-up completely.

3. Map of the Polygon Area Highlighting Management Issues

N/A.

4. Management Advice

Remove some of the bushes and some of the low vegetation surrounding the pond.

Remove silt from the pond

Prioritised list of management works:

N/A

4.1 Management Works Methodology

Vegetation can be cut with machinery.

Silt to be removed by machine – ensure that this does not conflict with any nature conservation requirements.

The management works must be undertaken according to the guidance specified below:

Additional consultations required prior to or whilst the work is being undertaken etc.

N/A

4.2 Long-term Management Recommendations / Best Practice

Regularly thin vegetation surrounding pond.

De-silt pond on a regular basis.

7.1 Glastir - Whole Farm Code	

1. Site Description

This farmstead comprises a house with a range of out-buildings, including a small barn, attached to its west end and a parallel range of out-buildings on the opposite side of a small yard. All buildings are of stone and probably date to the mid-19th century, although a large chimney at the east end of the house suggests earlier elements may be present. The house has been recently renovated, as have some of the out-buildings, others are roofless. It is no longer a working farm.

The RCAHMW records, from aerial photographs, a possible moated site immediately to the SE of the farmstead. There is no trace of this, and it would seem that a former paddock was mistaken for a moated site. The paddock lies on sloping ground and so is unlikely to have been a moat.

2. Current Condition

Two of the farm out-buildings have recently restored. The third, see photos below, is roofless and lintel over the main entrance in the pine end has collapsed. The tops of the walls are in poor condition and there is some ivy cover.

Management Issues

The main issue is the dereliction of the roofless out-building.

3. Map of the Polygon Area Highlighting Management Issues

4. Management Advice

Prioritised list of management works:

Repoint walls of derelict building, restore failed lintels, provide new doors and windows and reroof.

4.1 Management Works Methodology

Repointing to be done using lime mortar. Roofing and other features to be restored using appropriate traditional materials.

The management works must be undertaken according to the guidance specified below:

Additional consultations required prior to or whilst the work is being undertaken etc.

N/A

4.2 Long-term Management Recommendations / Best Practice

Maintain building for continued use.

4.3 Opportunities for Public Access and interpretation

7. Contractual Requirements

Some or all of the requirements detailed in the Management Plan may have been included in the Glastir Advanced contract. It is important that you read your contract before undertaking any work included in this Management Plan.

7.1 Glastir - Whole Farm Code

The Glastir Whole Farm Code states:

You must not damage any historic feature identified on your agreement map

Definitions of damage to a historic feature include ANY of the following:

- Ground disturbance or excavation especially extending beneath topsoil
- Dumping or storage of material, including temporary storage

- Removal of any material, including stones, soil or subsoil
- Visible signs of active erosion (loss and disturbance of topsoil) caused by livestock and vehicles or other agricultural practice
- Planting trees
- Allowing scrub to develop
- Ploughing or reseedling
- Displacing individual stone features

Glastir Advanced Historic Environment Feature (HEF) Management Plan

Date: 6 May 2018

HOUGHTON SPRING HEF 315610 PRN 112494

Customer Reference Number (CRN): AO030819

Farm/Common name: New Shipping Farm, Carew

This Management Plan has been produced by Dyfed Archaeological Trust to inform management of the Historic Environment feature (HEF). Some or all of the requirements included in this Management Plan may have been included in the Glastir Advanced contract.

Contained within this report:

1. Site Description	
Additional information:	
2. Current Condition	
Management Issues	
3. Map of the Polygon Area Highlighting Management Issues	
4. Management Advice	
Prioritised list of management works:	
4.1 Management Works Methodology	
4.2 Long-term Management Recommendations / Best Practice	
4.3 Opportunities for Public Access and interpretation	
5. Photographs	
6. Definitive Map of the HEF Polygon Area	
7. Contractual Requirements	
7.1 Glastir - Whole Farm Code	

1. Site Description

The head of this spring is defined by dry-stone walls at the head of a gully. Probably originally the water supply for Houghton Farm.

2. Current Condition

Dry stone walls in fair condition, water still flowing. Bushes and other low vegetation are beginning to choke the spring.

Management Issues

Bushes and other vegetation growth is the main issue, but this is a minor issue.

3. Map of the Polygon Area Highlighting Management Issues

N/A

4. Management Advice

Prioritised list of management works:

Cut and remove the low bushes and other vegetation around the spring.

4.1 Management Works Methodology

Hand clear the vegetation.

The management works must be undertaken according to the guidance specified below:

Additional consultations required prior to or whilst the work is being undertaken etc.

N/A

4.2 Long-term Management Recommendations / Best Practice

Regularly clear the vegetation.

4.3 Opportunities for Public Access and interpretation

N/A

5. Photographs

7.1 Glastir - Whole Farm Code	

1. Site Description

A single storey stone built detached farm out building. It was built in the early 20th century, mid-way between the farmstead known as New Shipping and the farmstead that replaced it to the north, New Shipping Farm.

The out building was a 'yearling house' for young cattle. It had become ruinous, but in 2004 it received a Tir Gofal grant and was restored. It is now used as a storage shed.

2. Current Condition

Good condition, used for storage.

Management Issues

None
