3.0 ARCHAEOLOGY

3.1 Summary

3.2 Register of archaeological sites and areas of archaeological interest

3.3 Annotated copy of Ordnance Survey 1:25000 map indicating areas of archaeological interest.

3.4 Annotated engineer's plans (reduced to 1:5000 scale) indicating areas of archaeological interest. (Drawing nos. 2E843/101-4)

4.0 APPENDIX

4.1 Estate map and schedule of Hopshill and Maysland, 1787 (NLW Vol. 39, pp 84-85).

4.2 Estate map and schedule of Vatson, Wooden and Kitehill, 1787 (NLW Vol. 39, pp 88-91).

4.3 Detail from estate map of Vatson, Wooden and Kitehill, 1787, indicating field system affected by the sewer link.

4.4 Section of tithe map for the parish of Begelly cum East Williamston, 1841, indicating field system affected by the sewer link.

4.5 Section of Ordnance Survey 2nd Edition 1:2500 Plan - Pembrokeshire XLI.3, 1907, indicating field system affected by the sewer link.

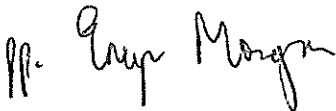

1.0 RECOMMENDATIONS (prepared by Curatorial Section)

This report on the archaeological implications of the proposed Saundersfoot to Tenby sewer link has been forwarded to the curatorial section of the Dyfed Archaeological Trust for recommendations.

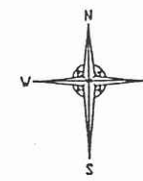

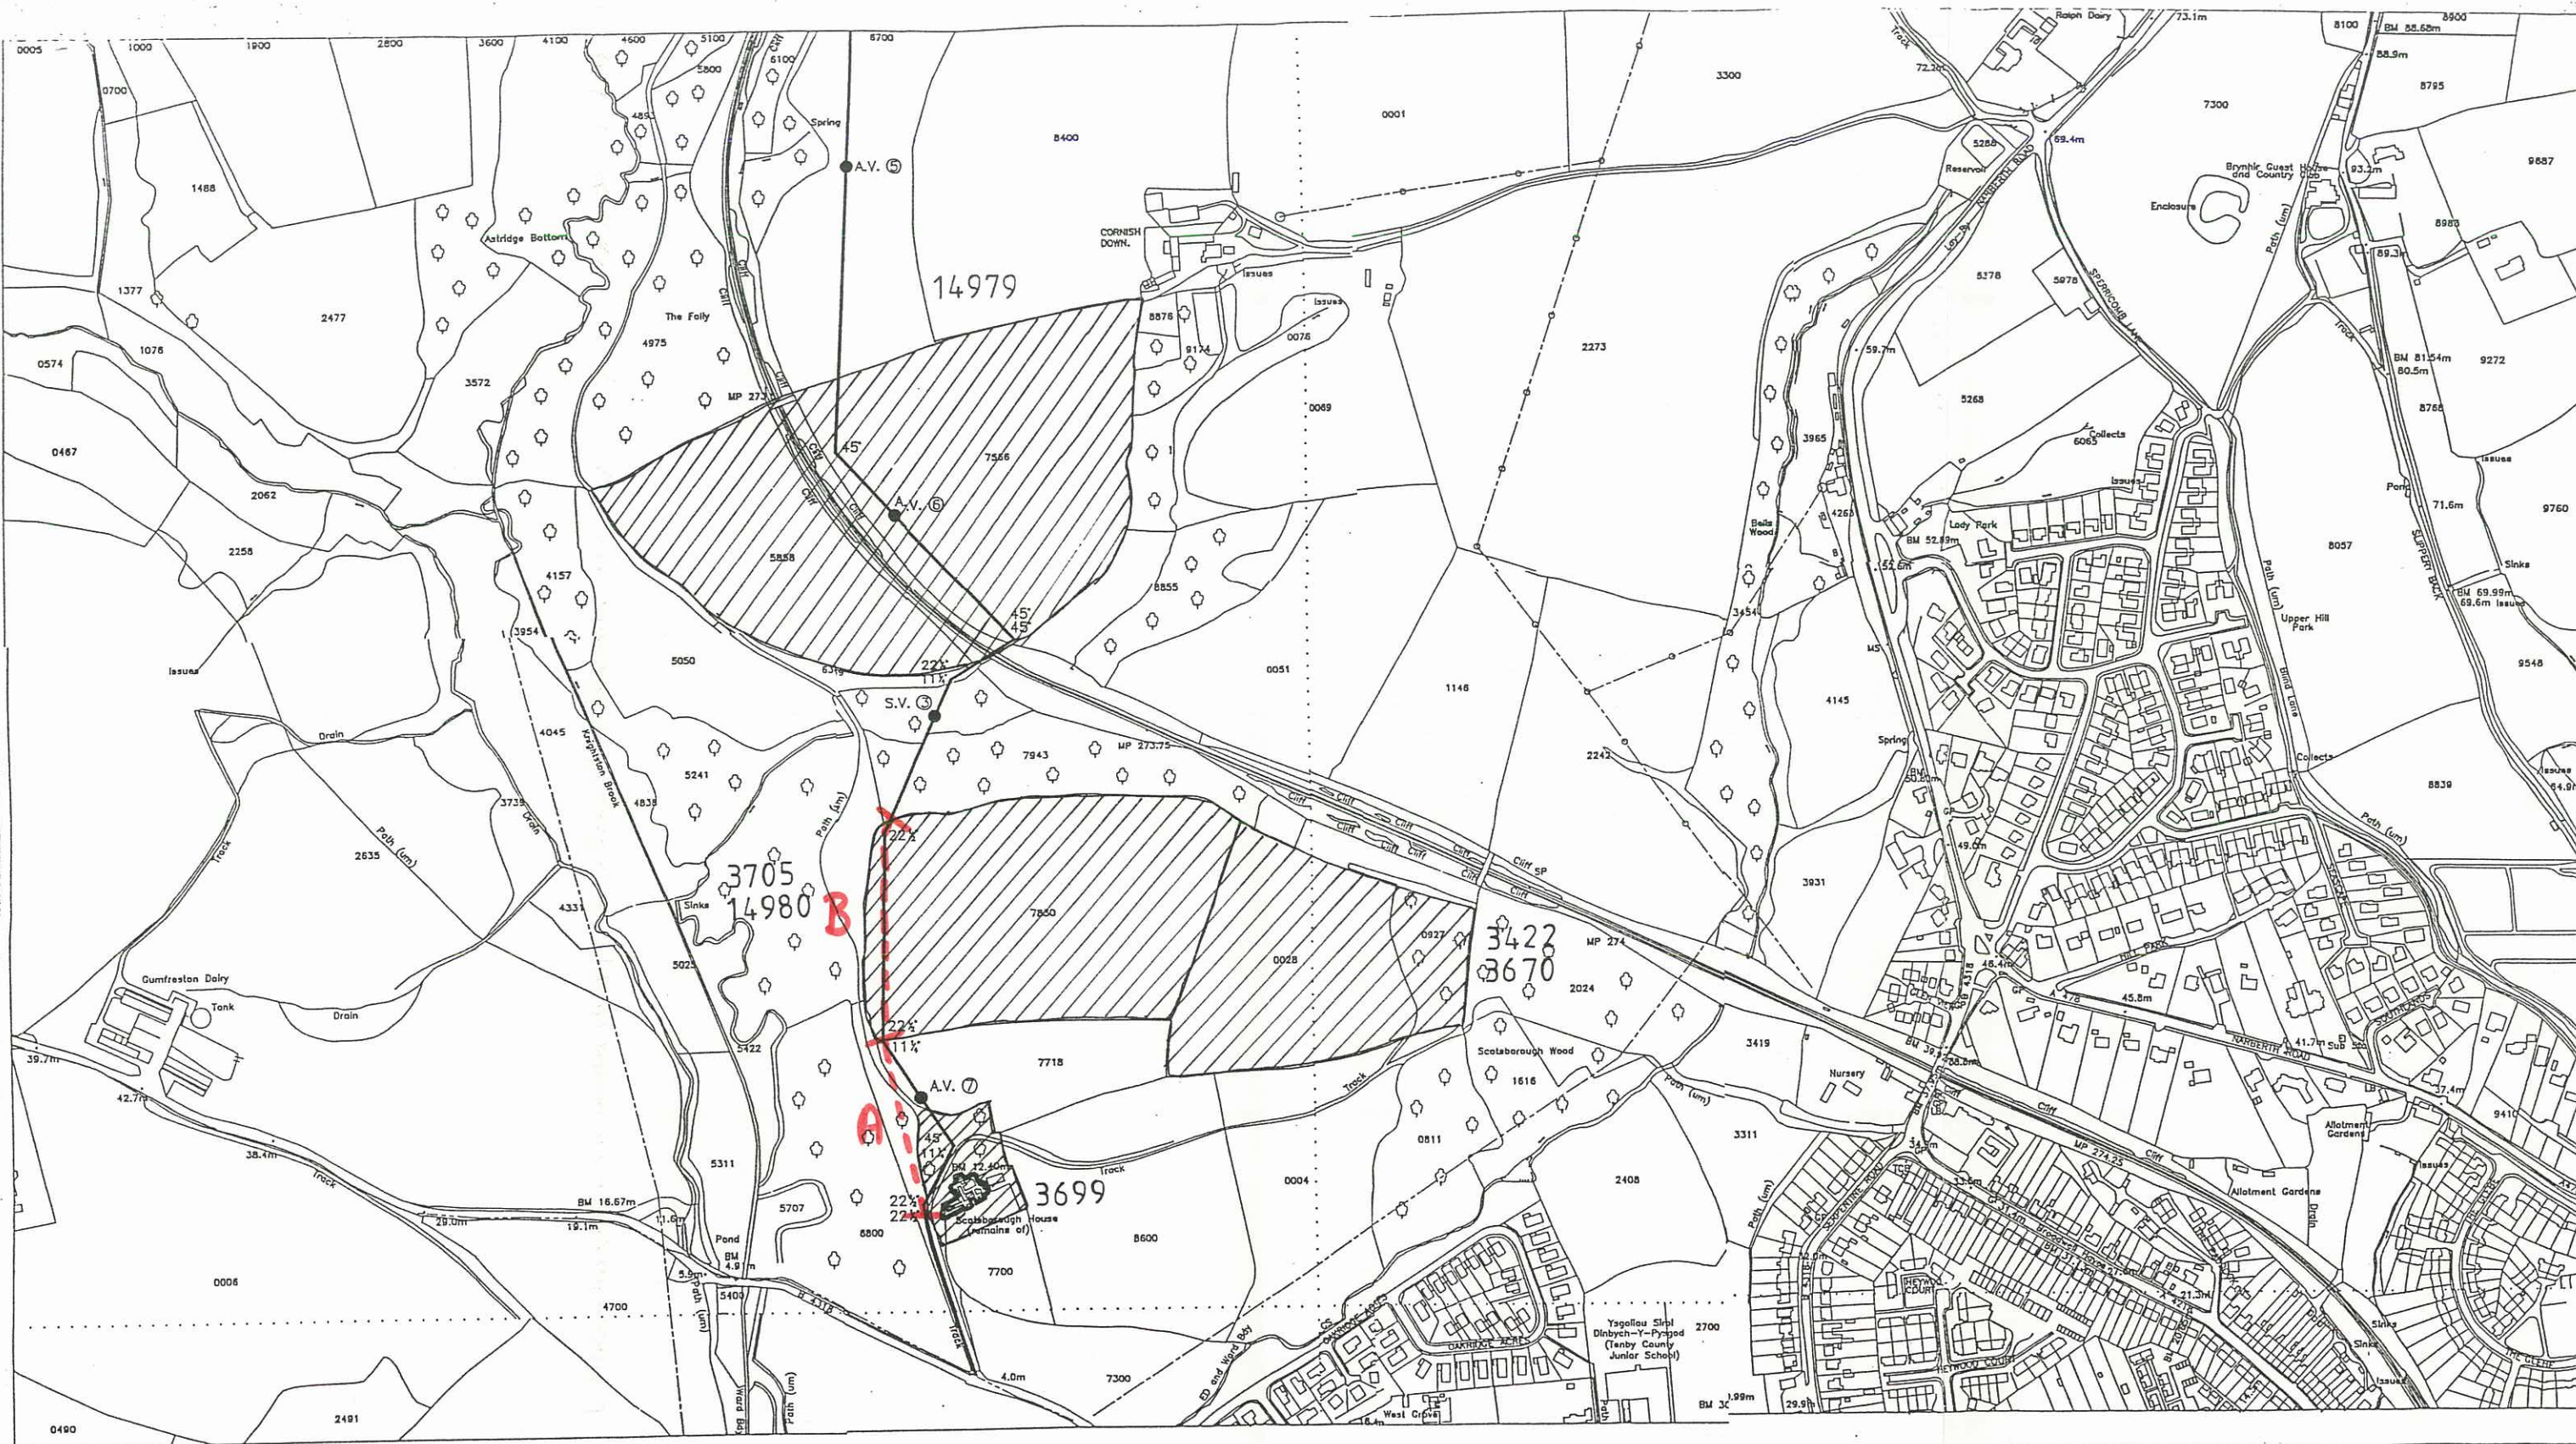

Your attention is drawn to the environs and remains of Scotsborough House (D.A.T. ref no. 3699; drawing no. 2E843/104 refers). We would recommend that a slight deviation in the proposed route line should be considered, removing the bend from the wooded area to the north of Scotsborough House, as indicated by the red dotted line labelled 'A' on drawing 2E843/104 below. Should this deviation not be possible, then there would be a need for an archaeological field evaluation of this area prior to pipeline laying since it appears to be one of high archaeological potential and importance. If the route line could be amended, then a watching brief over this section would represent a sufficient archaeological response. We would also recommend that no disturbance be caused to the remains of Scotsborough House during the course of works; the attention of Cadw (Welsh Historic Monuments) will be drawn to this building with a recommendation that it be included on the statutory schedule of ancient monuments of national importance.

Your attention is also drawn to the area known as 'Big Castle Hill' to the north of Scotsborough House containing two cropmark enclosures of uncertain origin (D.A.T. ref nos. 3705 & 14980; drawing no. 2E843/104 refers). An archaeological watching brief should be maintained over this particular section of pipeline laying in order to record any finds or features of archaeological interest, as indicated by the red dotted line labelled 'B' on drawing 2E843/104 below.

The other areas of archaeological interest indicated in this report are of lesser importance and it is our opinion that no archaeological monitoring is necessary or can be justified in these areas.

Mrs. H. James,
Principal Archaeological Officer (Curatorial)

2.0 INTRODUCTION

Details of a new sewer link scheme from Saundersfoot to Tenby were forwarded by Dwr Cymru's Development Officer to Dyfed Archaeological Trust for comment on 21st September 1993.

Following an initial assessment of the scheme by the Curatorial Section of Dyfed Archaeological Trust, Dwr Cymru were advised of the need for a detailed archaeological desk-top assessment of the project to be prepared in order for detailed mitigatory measures to be drafted. Subsequently, in a letter dated 14th October 1993, Dwr Cymru confirmed that it wished the Trust to undertake the detailed assessment of the scheme.

This report, prepared by Dyfed Archaeological Trust's Field Section, is intended to provide Dwr Cymru with sufficient information to assess the likely impact of the proposed works upon the archaeological resource and to take this into account as a material consideration in the determination of appropriate mitigatory measures.

The Trust's Curatorial Section provided a standard brief for this report and will advise Dwr Cymru on its findings and recommend further action if deemed necessary.

2.1 Methodology; content and scope of archaeological assessment

The primary stage of assessment of the archaeological implications of any scheme involves consultation of Dyfed Archaeological Trust's Sites and Monuments Record for the area affected by the proposed scheme.

Dyfed Archaeological Trust's Sites and Monuments Record is designated as a County Sites and Monuments Record in the Welsh Office Planning Policy Guidance Note 16: Archaeology and Planning (PPG 16).

Consultation of the Sites and Monuments Record will establish whether any known sites or monuments are affected by the scheme. However it is important to appreciate that the Record is not and cannot ever be a complete record of all traces of human activity in the landscape. It is rather a record of past archaeological work.

Consultation of the Record is therefore followed up by a rapid search of relevant map and documentary sources, both published and manuscript. All assessments carried out by Dyfed Archaeological Trust contain a full list of sources consulted.

All available aerial photographic collections held by the Trust are consulted and, if judged necessary, collections held by other bodies will be consulted. If sites or landscapes with special interest are affected the Trust would wish to consult the appropriate period or site type specialists or societies.

All desk-top assessments involve a field visit or visits to the scheme area by a professional archaeologist to check whether any previously unknown sites or monuments are affected by the scheme and to assess the overall landscape history of the area.

3.0 ARCHAEOLOGY

3.1 Summary

The northern terminus of the sewer link scheme lies just below a nineteenth century coal mine (23787). Further along the route, to the north of Knightston Brook, some hedge banks associated with the field system 14809 will be cut through by the scheme. To the south of this area the sewer link passes through a field once known as 'Big Castle Hill', within which are situated two cropmark enclosures (14980;3705). The adjacent field to the east, once known as 'Little Castle Hill', contains a further two enclosures (3422;3670). The nature of these sites is not known. At the southern terminus of the scheme, the sewer link runs immediately alongside a trackway, and passes close to a former dwelling of medieval origins, known as Scotsborough House (3699).

3.2 Register of archaeological sites and areas of archaeological interest

The reference numbers in the following catalogue are those allocated on Dyfed Archaeological Trust's Sites and Monuments Records. These numbers are shown on the following annotated engineer's maps.

23787. Foxholes Colliery. Described as a 'trial pit' by its developer, C.R. Vickerman, in 1882. M.R.C. Price (1982, 85) states that the complex consisted of a corrugated engine house and large boiler, built on a stone foundation. An incline of some 350 yards, described as a 'slope tramway', conveyed coal from the pit head to the nearby Bonville's Court Colliery. The shaft, 9' in diameter falling to a depth of 120 yards, was completed in 1884. However the enterprise was not a success and by 1887 the shaft was disused. The engine house and incline were dismantled soon after the turn of the century. The mine site is not affected by the sewer link. (Drawing 2E843/101)

19933. Kiln Park. Field name occurring on a 1787 plan of Hopshill and Maysland (1787, NLW Vol 39, pp 84-5) and the tithe apportionment for the parish of St. Issells, dated 1839. No evidence for the existence of a lime kiln was discovered during fieldwork. The sewer link will pass through this field. (Drawing 2E843/101)

14809. Field System. An area of strip fields, indicative of a former medieval open field system, is depicted on a plan of the holdings of Vatson, Wooden and Kitehill, dated 1787 (NLW Vol 39, pp 88-91). The portion of the field system relevant to the course of the sewer link is characterised by strips aligned roughly north to south. The tithe map showing the hamlet of East Williamston, dated 1841 (Begelly cum East Williamston), portrays the field system as having been greatly modified, although some of the field boundaries shown in 1787 survived, and are still in evidence today. Although the sewer link avoids many of the surviving boundaries associated with this system, some will be cut through. (Drawing 2E843/102)

19954. Coalpit Mountain. Field name occurring on the tithe apportionment for the parish of St. Mary (Tenby), dated 1840. No evidence for the existence of former coal workings was discovered during fieldwork. The sewer link will pass through this field. (Drawing 2E843/102)

14979. Stone Park. Field name occurring on the tithe apportionment for the parish of St. Mary (Tenby), dated 1840. No evidence for the existence of a standing stone or stone structure of any kind was discovered during fieldwork. The sewer link will pass through this field. (Drawing 2E843/104)

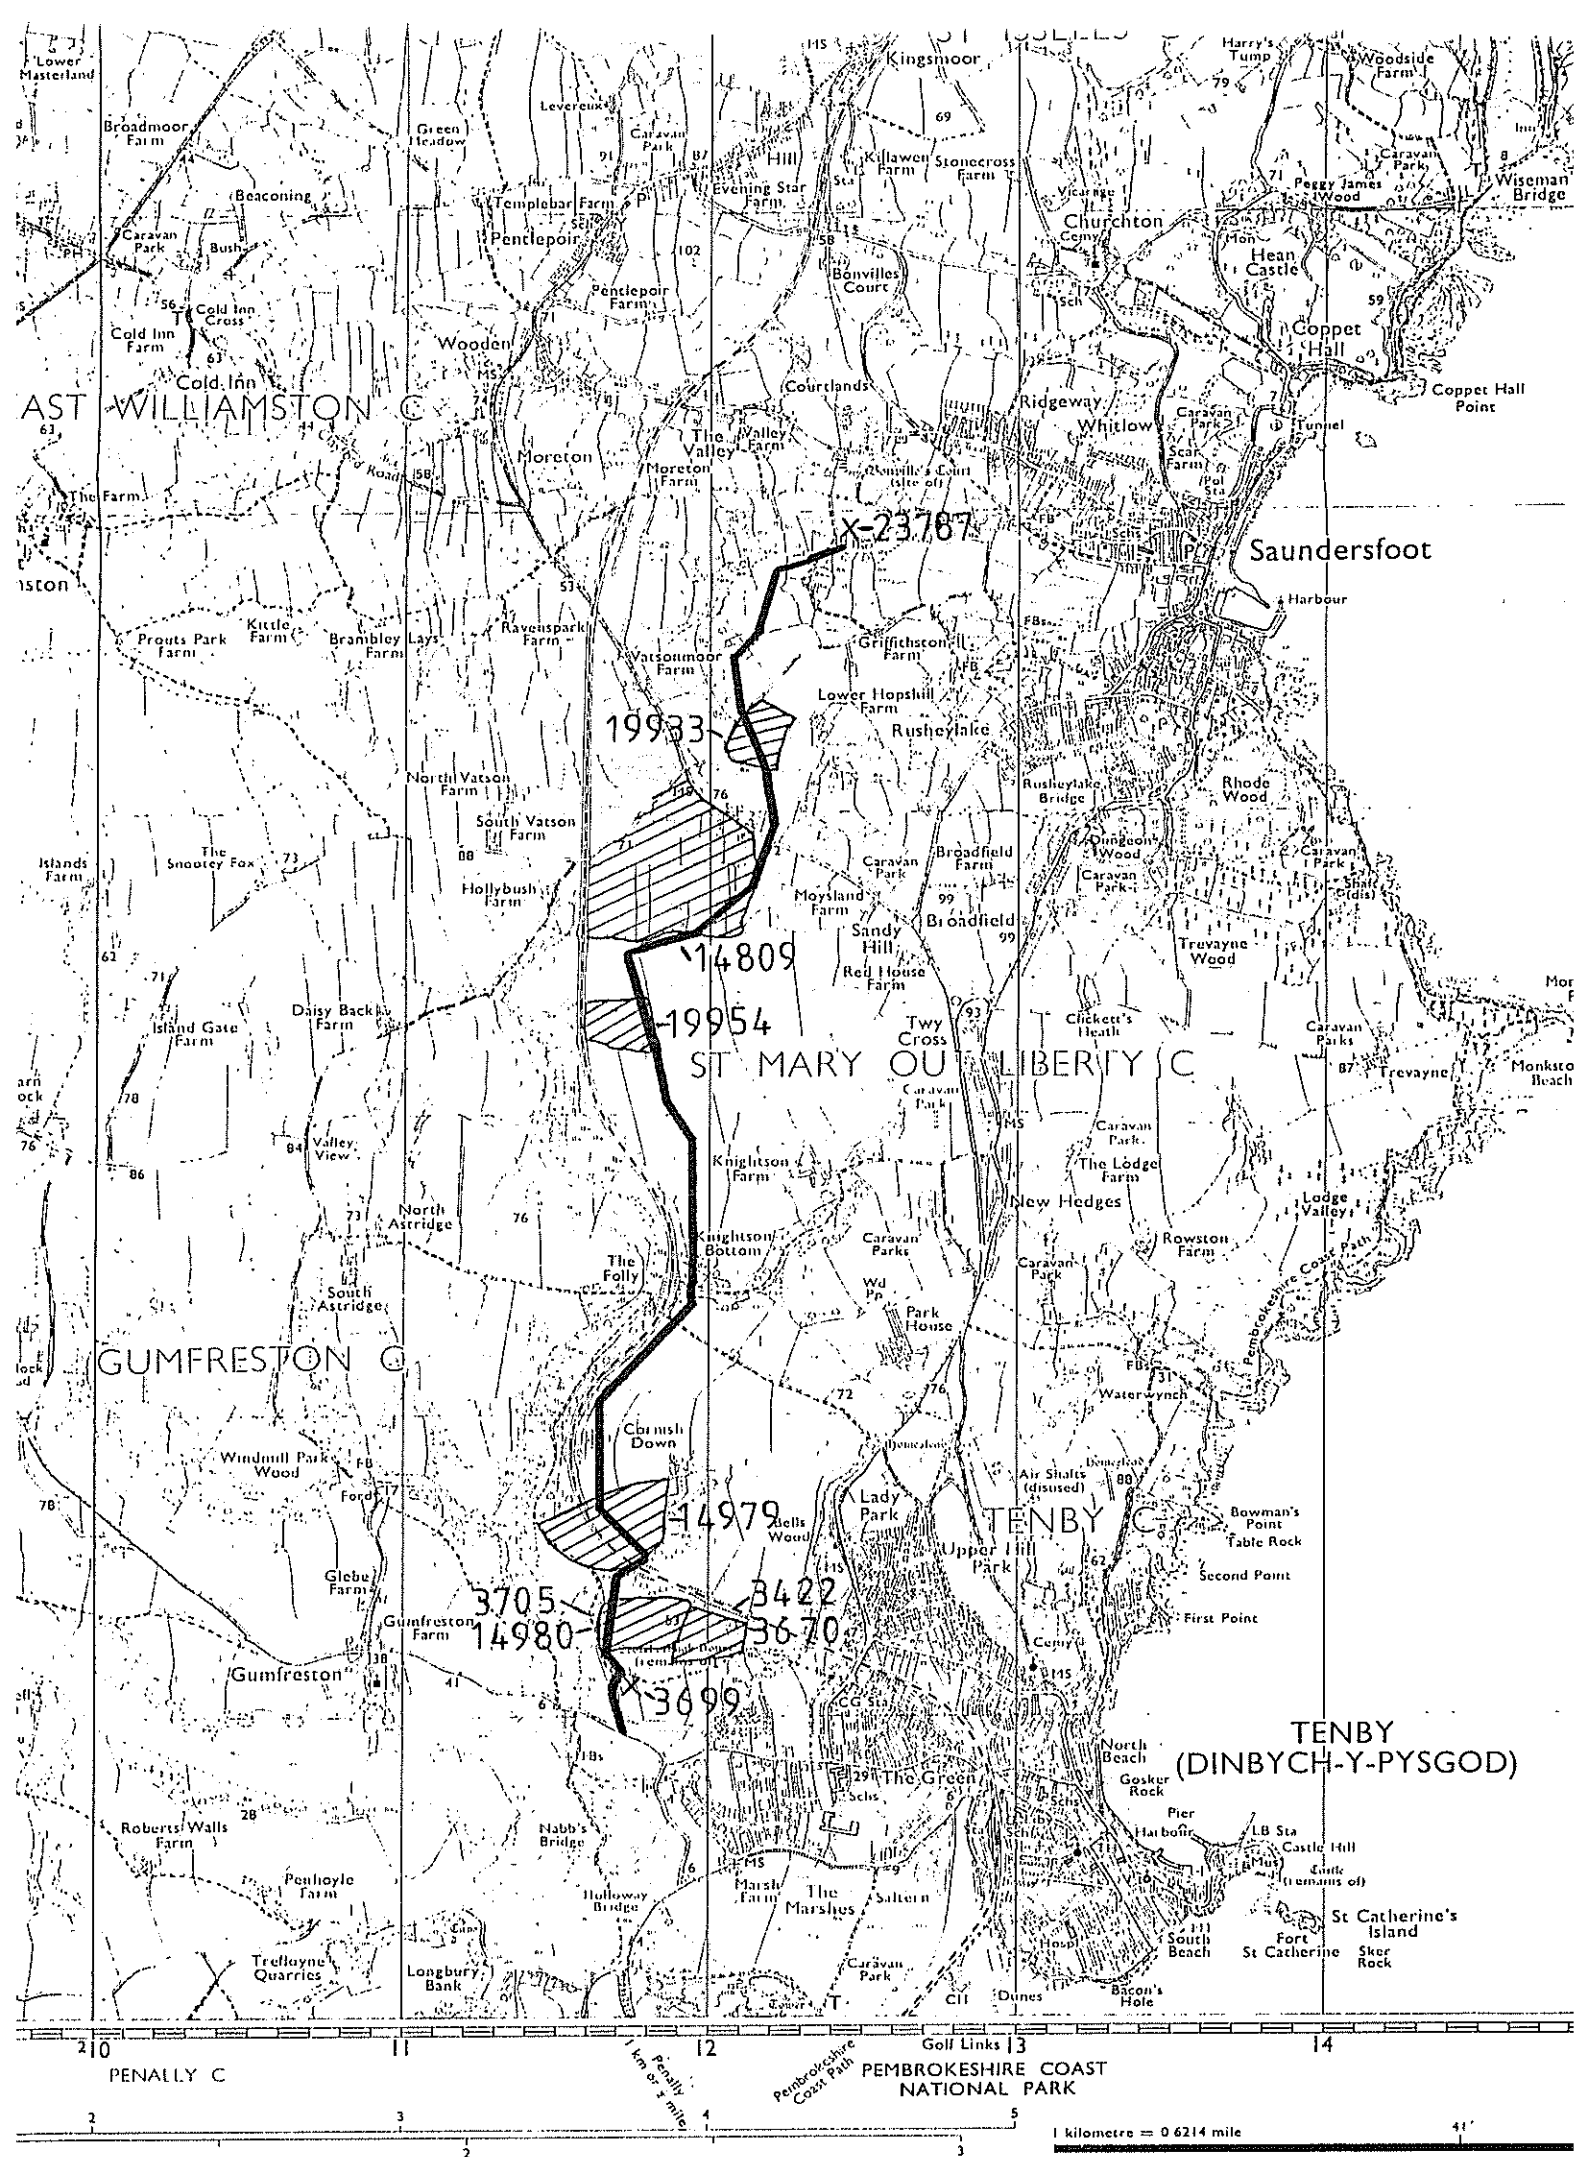

3705. Circular enclosure. The nature of this crop mark is uncertain. It is described by the Ordnance Survey as 'a small ringwork'. The site is visible as a crop mark on aerial photographs, taken by the R.A.F. in 1946, and lies within a field named 'Big Castle Hill' on the tithe apportionment for the parish of St. Mary (Tenby), dated 1840. The site was not evident on recent aerial photographs held by the Pembrokeshire Coast National Park (see section 2.2) and was not detected during fieldwork. The sewer link passes through the field known as 'Big Castle Hill', but does not affect the crop mark site. (Drawing 2E843/104)

14980. Rectilinear enclosure. A large rectilinear enclosure in the form of a crop mark, is visible on a recent aerial photograph (Geonex, 1992, 5892, line 115, 91). The nature of this site is uncertain and it was not detected during fieldwork. The enclosure lies within a field named 'Big Castle Hill' on the tithe apportionment for the parish of St. Mary (Tenby), dated 1840. The sewer link passes through the field known as 'Big Castle Hill', but does not affect the crop mark site. (Drawing 2E843/104)

3422 & 3670. Circular enclosures. The nature of these crop marks is uncertain. Both are visible as crop marks on aerial photographs, taken by the R.A.F. in 1946, and lie within a field named 'Little Castle Hill' on the tithe apportionment for the parish of St. Mary (Tenby), dated 1840. The sites were not evident on recent aerial photographs held by the Pembrokeshire Coast National Park (see section 2.2) and were not detected during fieldwork. The crop mark sites are not affected by the sewer link. (Drawing 2E843/104)

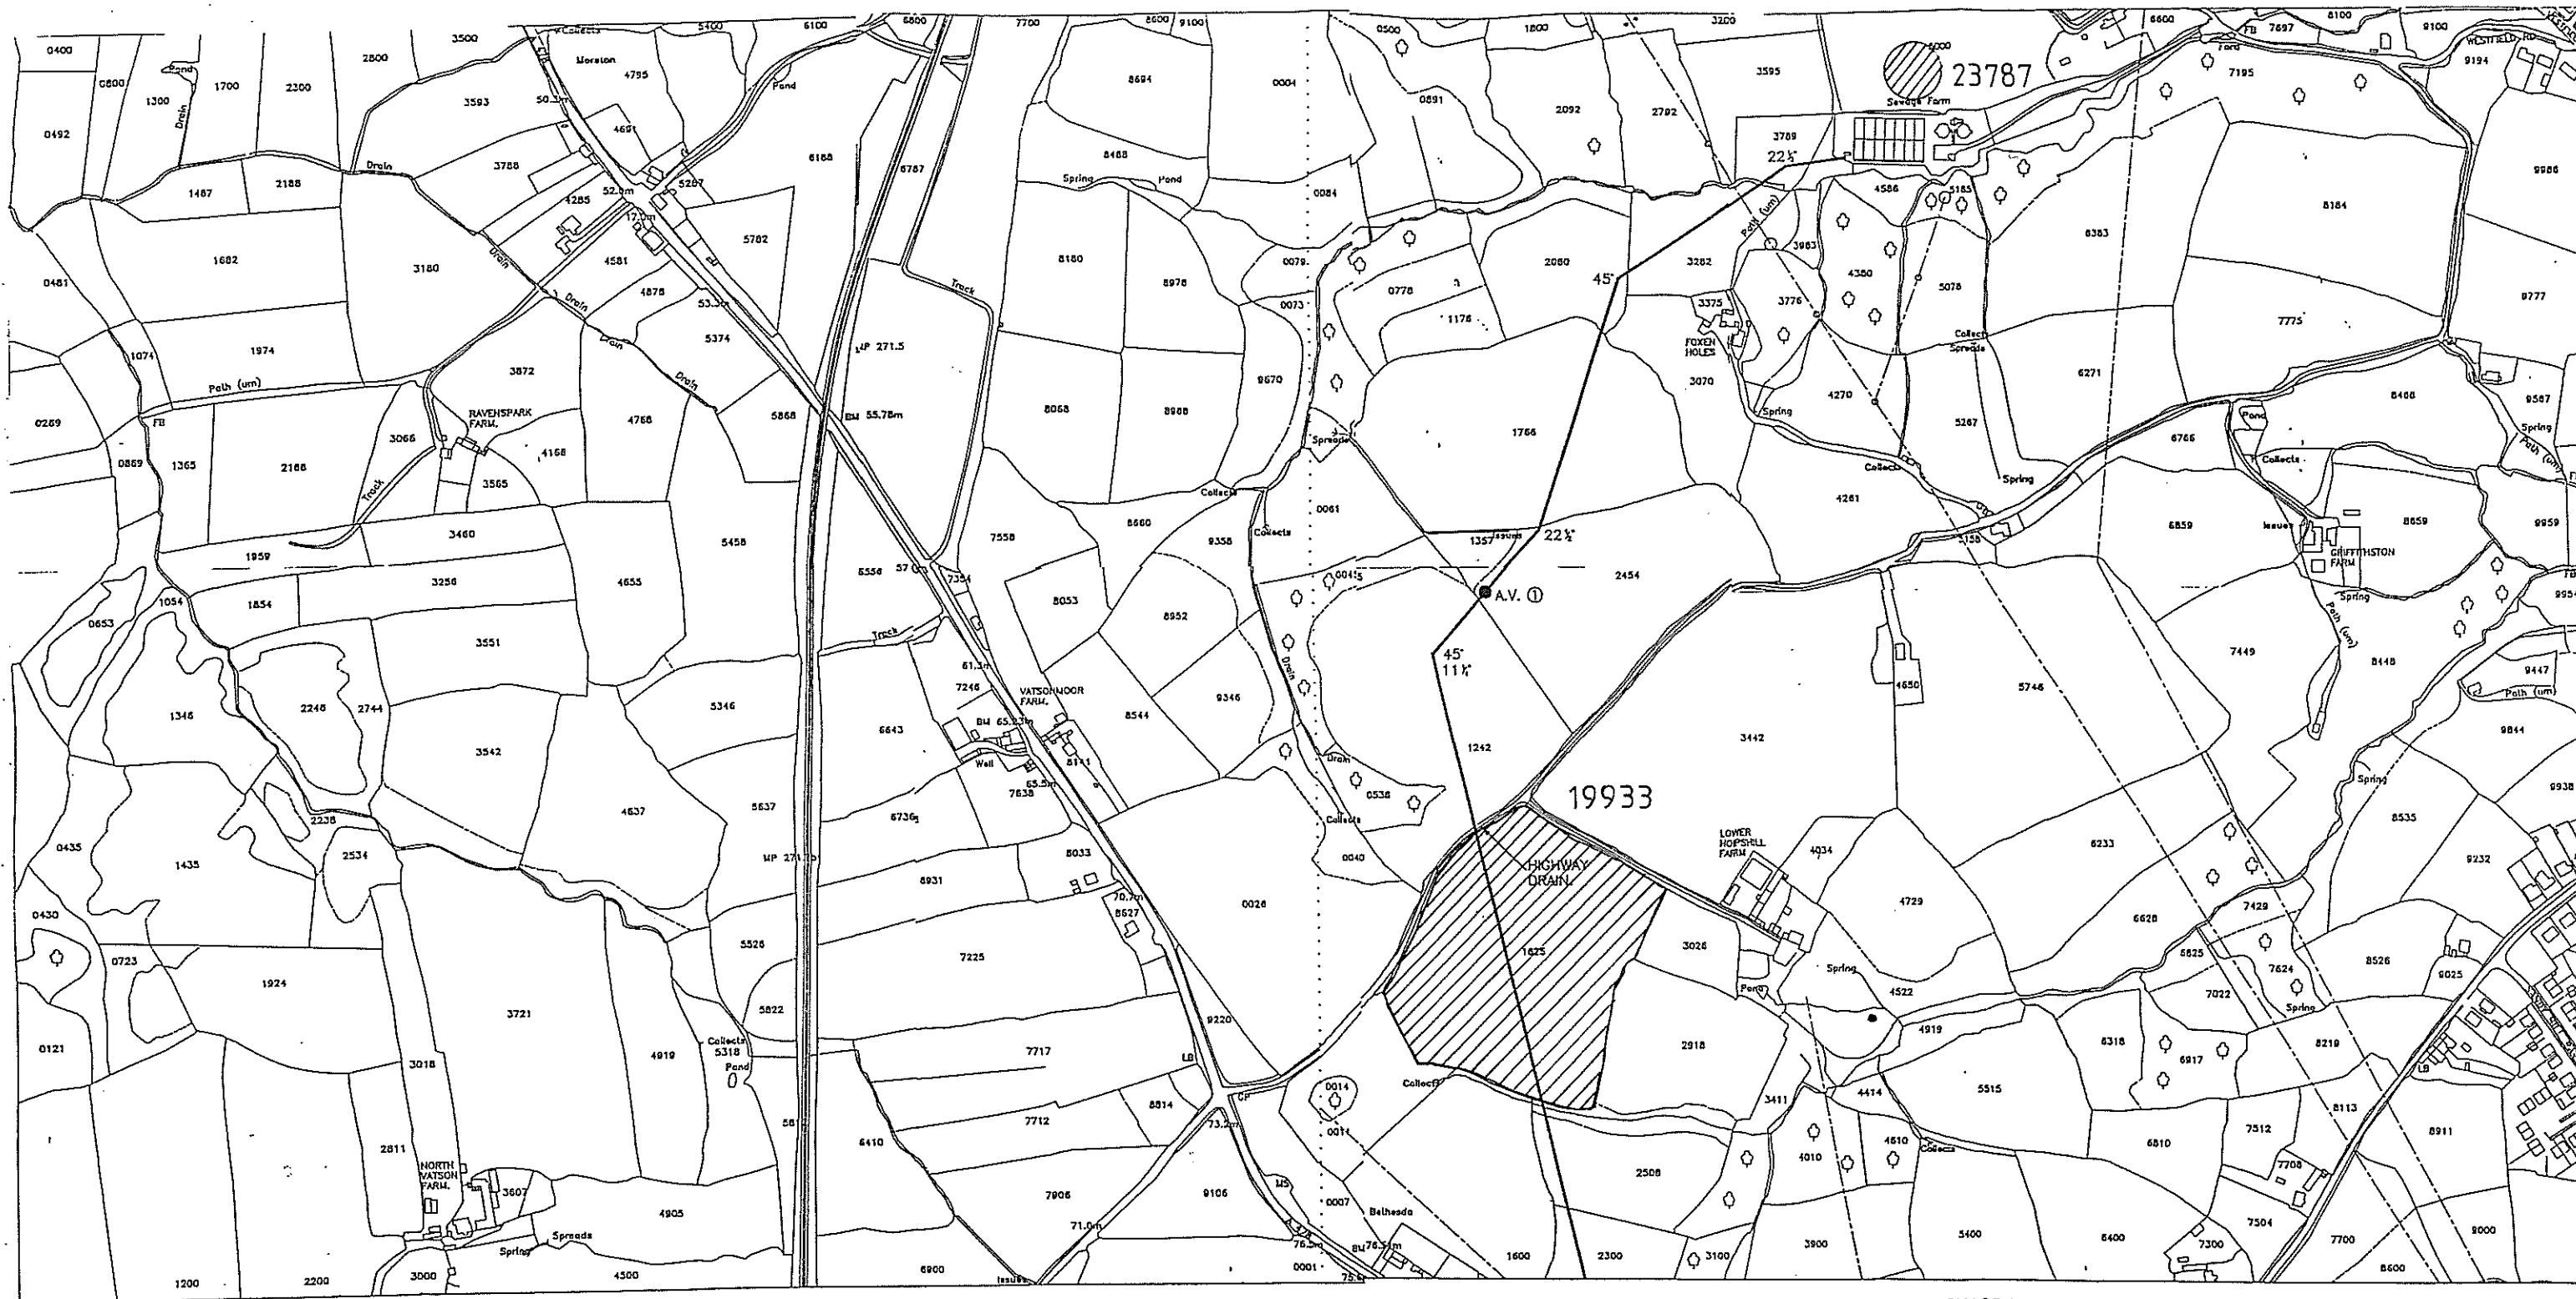

3699. Scotsborough House. Medieval dwelling, the remains of which possibly date to the beginning of the fourteenth century (Ordnance Survey Archaeology Division record card), although there is no record of this on Rees' Map (1932, SW sheet). B.G. Charles quotes an early reference to 'Scotisborowgh', dated 1487 (1992, p. 564). The building is now in a ruinous condition. The sewer link does not affect the remains of the dwelling. However, antiquarian sources refer to the existence of earthworks which were presumed to defend the site of an (earlier?) dwelling. No trace of such features is apparent although archaeological deposits may survive. (Drawing 2E843/104)

3.3 Annotated copy of Ordnance Survey 1:25000 map indicating areas of archaeological interest.

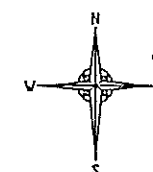

scale 1:25 000

3.4 Annotated engineer's plans reduced to 1:5000 scale) indicating areas of archaeological interest. (Drawing nos. 2E843/101-4).

Note: Several exchanges have taken place here between the Tenants, so far back in time that the present Occupiers cannot, with certainty, ascertain the Original property. For instance, No 75 near Kitehill, is said to be given to Hollybush for the field marked A adjoining to No 45. No 73, and a piece in the Gants, are supposed to be exchanged for the two pieces of Mrs Barlow in the Castle hill adjoining Nos 70 & 71. Likewise No 31 is now considered as part of Hollybush in lieu of the two pieces marked B & D adjoining Nos 19 & 48.
