EARLY MEDIEVAL ECCLESIASTICAL SITES IN CARMARTHENSHIRE

STAGE 2: ASSESSMENT AND FIELDWORK

1.0 SUMMARY

The early medieval ecclesiastical sites project (EME) was initiated by Cadw, through the four Welsh Trusts, in 2001. The aim of the project was to identify ecclesiastical sites in Wales with pre Anglo-Norman Conquest origins, in order to formulate management strategies and scheduling priorities. Cambria Archaeology (Dyfed Archaeological Trust) was appointed to cover the counties of Carmarthenshire, Ceredigion and Pembrokeshire. A cut-off date of 1100 AD was selected.

Early medieval ecclesiastical sites fall into two main categories -

- *Church/chapel sites, ie. 'developed' cemetery sites*
- *Open cemetery sites, ie. 'undeveloped', never having received a building. These include a number of bronze age round barrows and iron age enclosure re-use sites. These open sites are usually more difficult to identify and assess.*

Stage 1 of the project consisted of a desk-based assessment of the three counties, using the Sites and Monuments Record (SMR) as the baseline data. From this assessment emerged a graded list of 61 Ceredigion sites with probable or possible early medieval pre-Conquest origins, in addition to a list of 39 Early Christian Monuments (ECMs).

Stage 2 comprised analysis of aerial photographs of these sites, where available, and selective field visits in order to assess their nature, extent, condition, archaeological potential, threats and value. As a result, the list of 61 sites was amended and refined to a list of 54 sites, comprising -

	<u>2004</u>	<u>(2002)</u>
▪ Grade A sites (high probability)	6	(9)
▪ Grade B sites (medium probability)	11	(13)
▪ Grade C sites (low probability)	11	(12)
▪ Grade D sites (possible sites)	26	(27)

In addition -

▪ Early Christian Monuments (ECMs)	35	(39)
------------------------------------	----	------

The main outcome from Stage 2 has been the enhancement and refinement of both the SMR and the schedule of Ancient Monuments, with the formulation of management strategies, scheduling priorities and recommendations for future archaeological investigation.

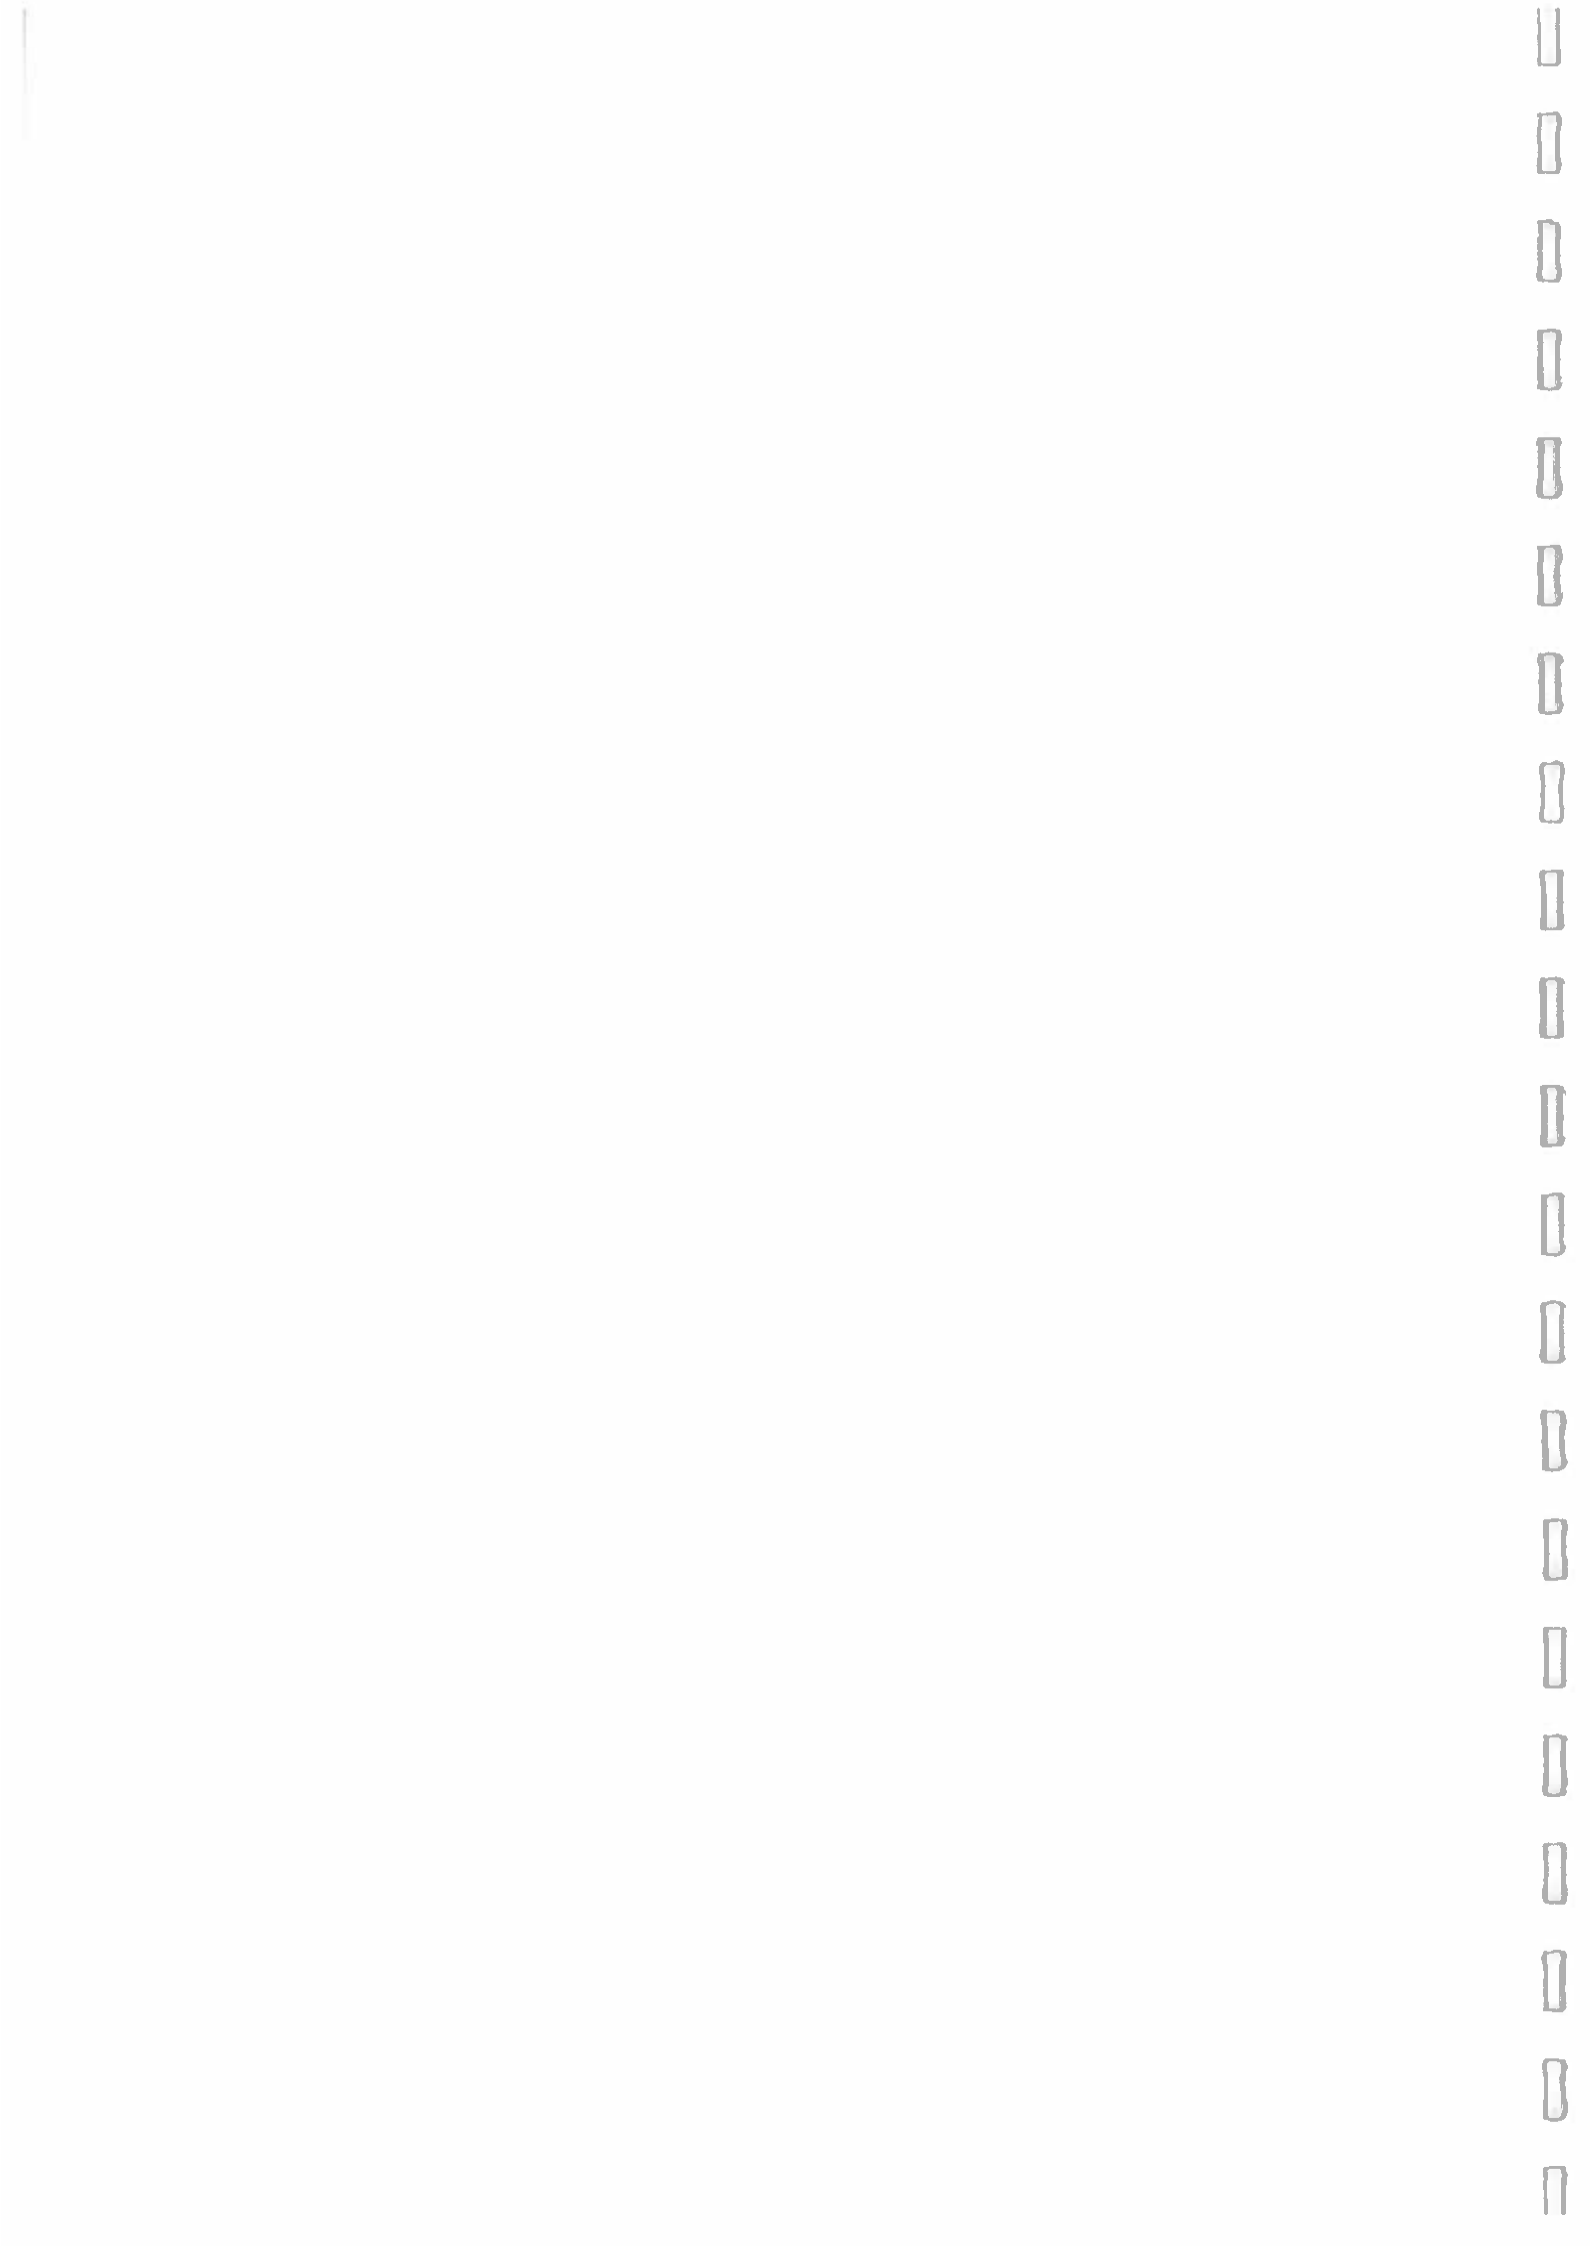

One of the outcomes of this Stage 1 assessment is a demonstration that many of the traditional indicators and suppositions do seem to hold true ie. circular churchyards, in situ Early Christian Monuments (ECMs) and 'Celtic' dedications are often accompanied by other evidence for early medieval origins. Re-use of iron age sites, and the former presence of large, curvilinear outer ecclesiastical enclosures were suggested at a number of new churchyard sites. In addition, the former location of ECMs, topographic evidence and post Anglo-Norman Conquest documentary sources were used to suggest earlier origins for several new sites. However, it was also demonstrated that the 'native' ecclesiastical tradition was remarkably persistent, particularly in the north and east of the county, which was not brought under direct Anglo-Norman rule until the late 13th century.
