--------------------------------	---------------

1. Introduction

The Dyfed Archaeological Trust has been involved with the pan-Wales Deserted Rural Settlements Project since 1996-7. Four successive years of fieldwork and desktop research were carried out by the Trust between 1996 and 2001 and in total approximately 900 Deserted Rural Settlements were visited and assessed. However, this survey was confined to 23 specific survey areas across all three counties. In order to determine the number of DRS sites elsewhere in the region, the work during 2001-2 focused on a desk-based review of all the potential DRS sites recorded on the regional Sites and Monuments Record. In particular, it was recognised that many potential DRS sites had been entered into the SMR under misleading or inappropriate site-type descriptions. In total over 8300 records were reviewed and amendments made to attempt to correct and standardise site-type descriptions.

The 2001-2 project made it possible for DAT, for the first time, to quantify the extent of the DRS resource across the region. Importantly, it also allowed for the identification of all relevant sites that had not been included in the earlier Deserted Rural Settlements Project surveys. This report begins the process of assessing these sites and concluding the contribution of DAT to the Deserted Rural Settlements project. The final phase of assessment will be undertaken during 2003-4.

1.1 Site Selection & Study Areas (see Map 1)

The earlier DRS survey work in southwest Wales had used a broad definition of the term 'Deserted Rural Settlement' and the 900 sites visited and assessed included deserted sites recorded as 'Cottage' or 'Farmstead' and ancillary structures such as 'Shelter' and 'Sunken Shelter'. However, for the 2001-2 stage of the project, the use of a narrower definition of site types, that focused on only those site types described as 'Deserted Rural Settlement', 'Longhouse', 'Long Hut' and 'Platform', allowed a closer comparison with the site types visited and assessed as part of the Deserted Rural Settlements Project by the other Welsh Archaeological Trusts.

The 2000-1 project identified a total of 1085 sites in the regional SMR that were described as 'Deserted Rural Settlement', 'Longhouse', 'Long Hut' and 'Platform'. 317 of these had been previously assessed by Cambria as part of the Deserted Rural Settlement Project. 668 of these sites had not been included in these earlier surveys.

This group of 668 sites was broken down into three categories:

- 243 sites were identified as being located in Ceredigion and North Pembrokeshire, to be assessed during 2002-3
- 316 were identified as being located in Carmarthenshire and South Pembrokeshire, to be assessed during 2003-4
- A further 109 sites across the whole region were known to have been recently visited by other recent field projects and it was felt that sufficient in-house knowledge was available to make another field visit unnecessary and that the records of these 109 sites could be rapidly enhanced to conform to the DRS project standards as a desk-based exercise, to be undertaken during 2002-3

These figures have been amended subsequently as the SMR is a dynamic record that changes daily. Thus, when project work began on the 2002-3 project, a total of 348 sites were identified for assessment (Map 1). The concentration of sites in upland areas, along the coastal edge and also on Castlemartin area of South Pembrokeshire is indicative of the fact that the record predominantly reflects knowledge gained by specific fieldwork projects carried out in the region during the past 25 years. Our knowledge of the extent of the DRS resource outside these areas, particularly in the lowlands remains limited. However, its potential has been highlighted in Cambria's 1999-2000 DRS project report.

The total of 348 sites was subdivided into two categories:

- 239 sites which required a site visit to allow reassessment (see Table 1 and Map 2)
- *109 sites to be assessed through a desk-based exercise as sufficiently detailed in-house records already existed for them (see Table 2 and Map 3).

*As Map 3 shows, these sites were concentrated in 4 clusters. They reflect work funded by the RCAHMS Mynydd y Ffynnon Project in the Cwmystwyth area, northeast Ceredigion; Cadw grant-aided work in the Llyn Brianne area, south Ceredigion and Garn Goch area, Carmarthenshire; MOD commissioned work on the Castlemartin firing ranges, Pembrokeshire.

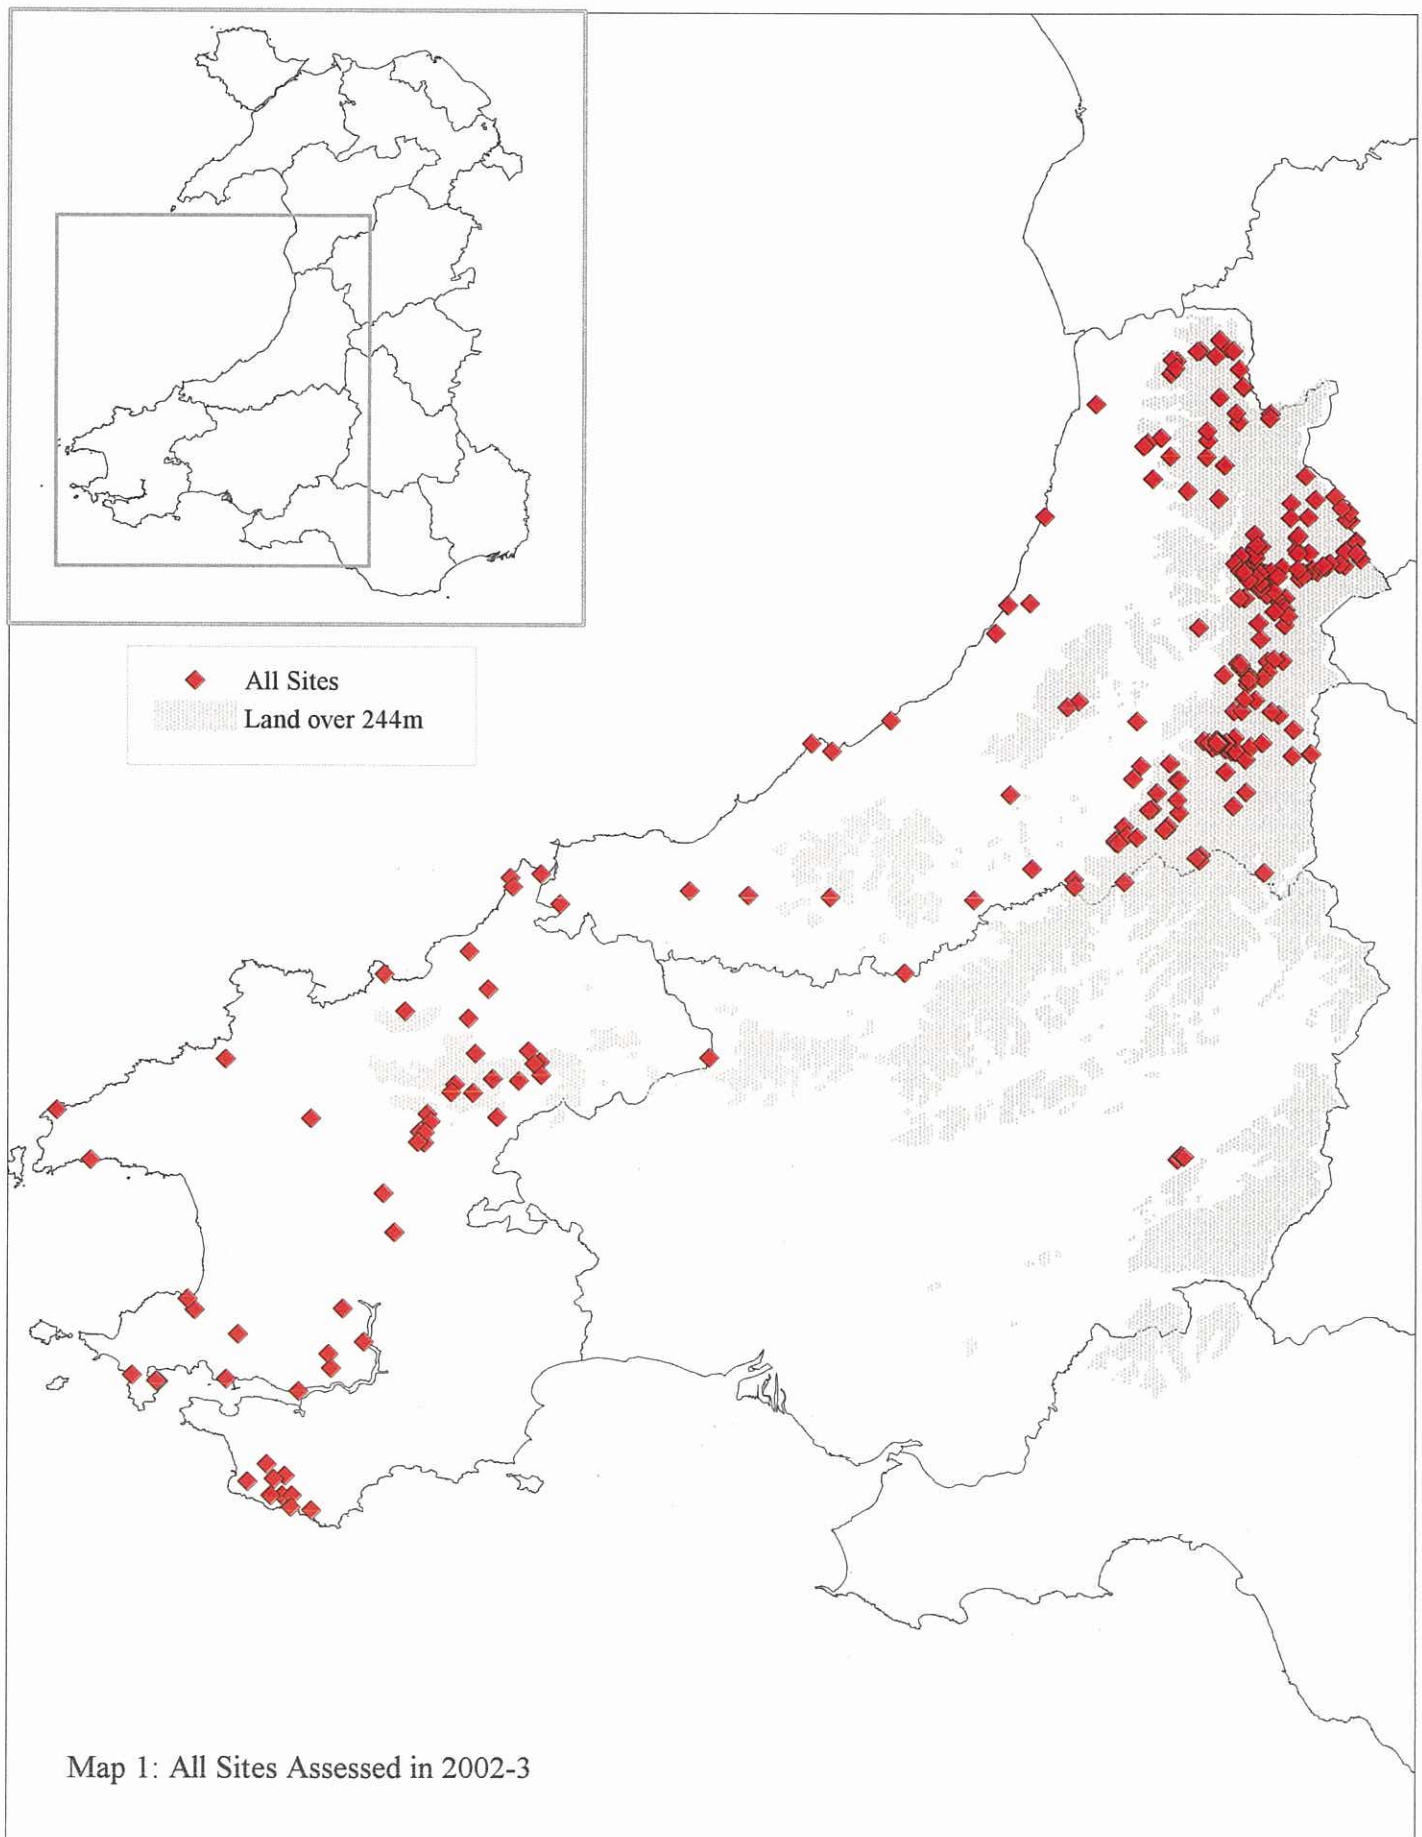

Table 1: List of sites identified as requiring a field visit

2. Site visits

The need to reassess the 668 sites identified in 1.1 above arose due to a lack of reliable or recent information about their condition and character. Deserted Rural Settlement Project work between 1995 and 2000 had shown that many existing records were inaccurate, with sites often recorded under the wrong site type. There was also a lack of detail of the condition and landscape context of previously recorded sites that needed attention. It was also important that information was recorded regarding threats to the continued survival of sites, or that well preserved sites were identified as potential candidates for statutory protection as Scheduled Ancient Monuments.

The 2001-2 desk-based reassessment of the SMR had been undertaken for all recorded deserted rural settlements to ensure that site records were as accurate as possible. It was important, therefore, that the same standards of record could be applied to those sites that had not previously been visited in the field either as part of the Deserted Rural Settlement Project or other recent projects.

To meet these objectives, rapid field visits were made for the 239 sites listed in Table 1. A two-person team undertook visits to all sites located in upland or marginal land contexts, and a single field worker visited those sites located on enclosed farmland. Fieldwork was carried out during the autumn and winter of 2002-3.

Site specific, proforma record sheets were used in the field, which were based on the structure of the SMR database and included all relevant information held by the SMR for each site. These greatly enhanced the ability to make an accurate and rapid assessment of each site.

2.1 Unassessed sites

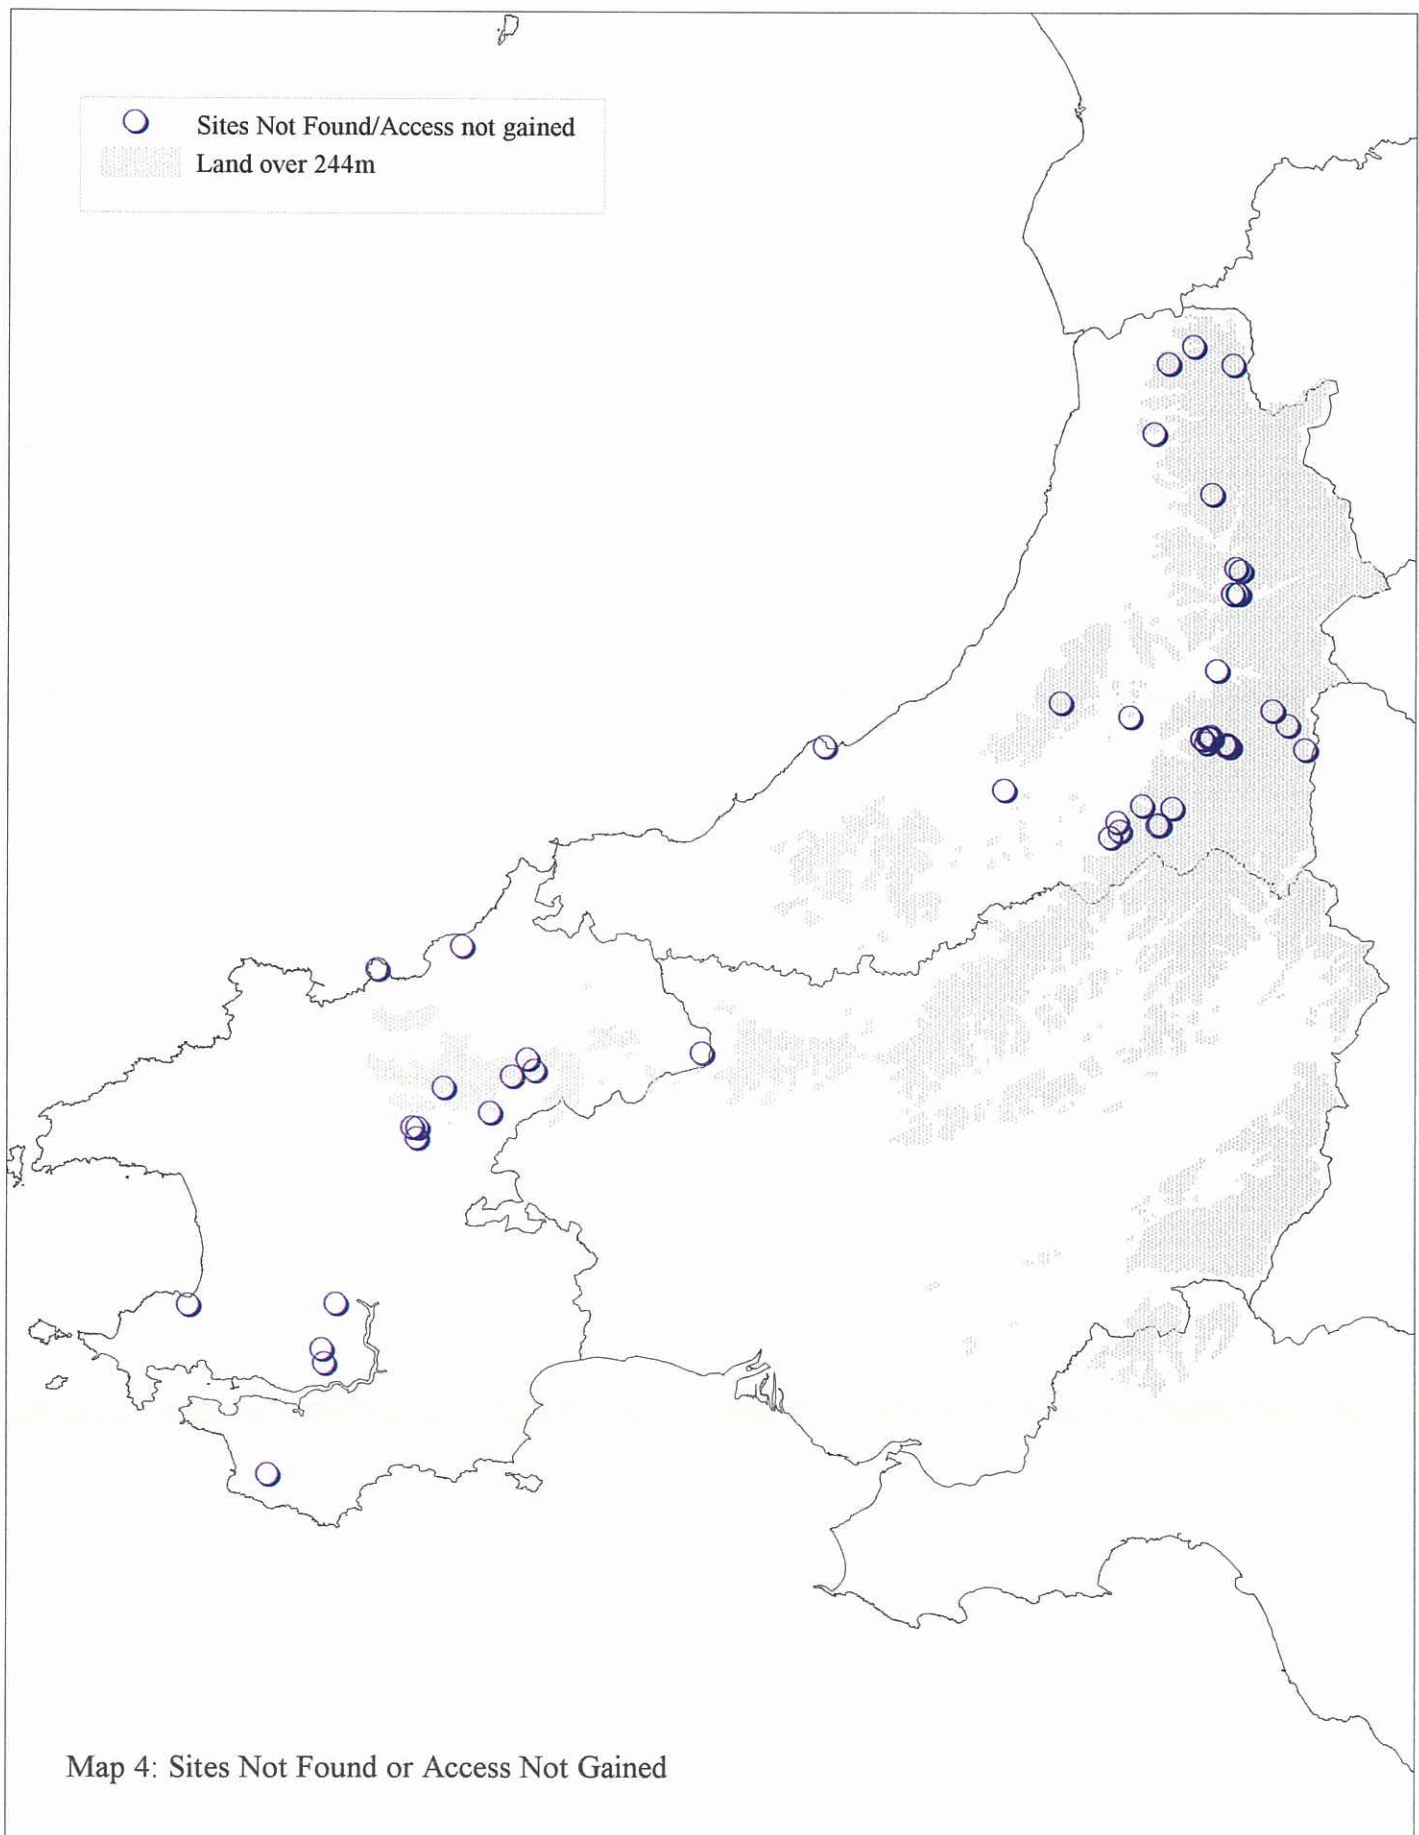

Not all of the sites identified for visiting were reached by the project and these fall into two categories:

2.1.1 Unlocated sites

Sixty four sites (27%) were not reassessed either due to inaccessibility (including refusal of permission, inability to gain permission or problems with vegetation) or due to a failure to locate the recorded feature (which may have been caused either by errors in the original grid reference co-ordinates or the destruction of features since the original record was made). These sites are listed in Table 3 and shown on Map 4. The failure to relocate those sites in upland areas is probably due to inaccurate grid-references. The original locations were made before GPSs were available

Table 3: Sites not found or access not gained

2.1.2 Discounted sites

Following the site visits a further 45 sites were discounted as DRS sites. These included one duplicate record and sites recorded under the site type LONGHOUSE where the condition was A, F or R - Occupied, Modernised or Restored - and therefore falling outside the definition of Deserted Rural Settlements. These sites are listed in Table 4.

2.2 Assessed sites

The removal of unlocated sites and discounted sites from the site list leaves 239 DRS sites that were successfully reassessed through field visit (130) or desk-based analysis (109). These sites are discussed in more detail in 3.1 below and shown in Maps 5, 6, 7 and 8. They are also listed in Table 5.

NB This group of 239 assessed sites does not correspond to the group of 239 sites that were identified as requiring a site visit (see 1.1 and Table 1 above).

Table 5: The 239 DRS sites visited and assessed during 2002-3

3. Site types

As suggested in 1.1 above, a major concern throughout the project was to ensure that deserted settlements are recorded with the use of the appropriate site type terminology, conforming to the current Extended National Database glossary. Much of the reassessment of known sites carried out during the 2000-1 Deserted Rural Settlement Project involved correcting errors in terminology.

Table 6 lists the site types used in the regional SMR to describe the 348 sites that were initially assessed this year. From this table, it can be seen that for many sites there was uncertainty regarding their true character. The application of the term Deserted Rural Settlement to these sites was largely the result of the 2001-2 desktop assessment of all records. Where the written description of a site was suggestive of the site being a possible settlement site, the site type "Deserted Rural Settlement" or "Deserted Rural Settlement?" was used, sometimes in conjunction with the extant site type description (i.e. Deserted Rural Settlement; Cottage?").

The value of reassessing these sites, either through field visits or the examination of previously existing descriptions, can be seen by comparing Table 6 and Table 7. The latter shows the significant amendments to the record that were made as a result of this project.

Even field assessment does not remove doubt as to the true nature of all sites. The observation of surface features alone can sometimes make accurate classification very difficult, particularly at denuded sites. In many cases further investigation of sub-surface archaeology would be required to determine the true character of a site. For example, the identification of one visited site as a ROUND BARROW?;LONG HUT?;CAIRN? reflects genuine uncertainty in the interpretation of a site's surface remains.

3.1 Distribution of sites by type

The site types of the 239 DRS sites that were successfully identified and reassessed by the project are tabulated in Table 8 and their distribution mapped by Maps 5-8.

Table 8: Site Types after assessment

Site Type	Number of Sites
DESERTED RURAL SETTLEMENT	47
DESERTED RURAL SETTLEMENT?	13
LONG HUT	57
LONG HUT?	21
LONGHOUSE	18
LONGHOUSE?	1
PLATFORM	75
PLATFORM?	7
Total	239

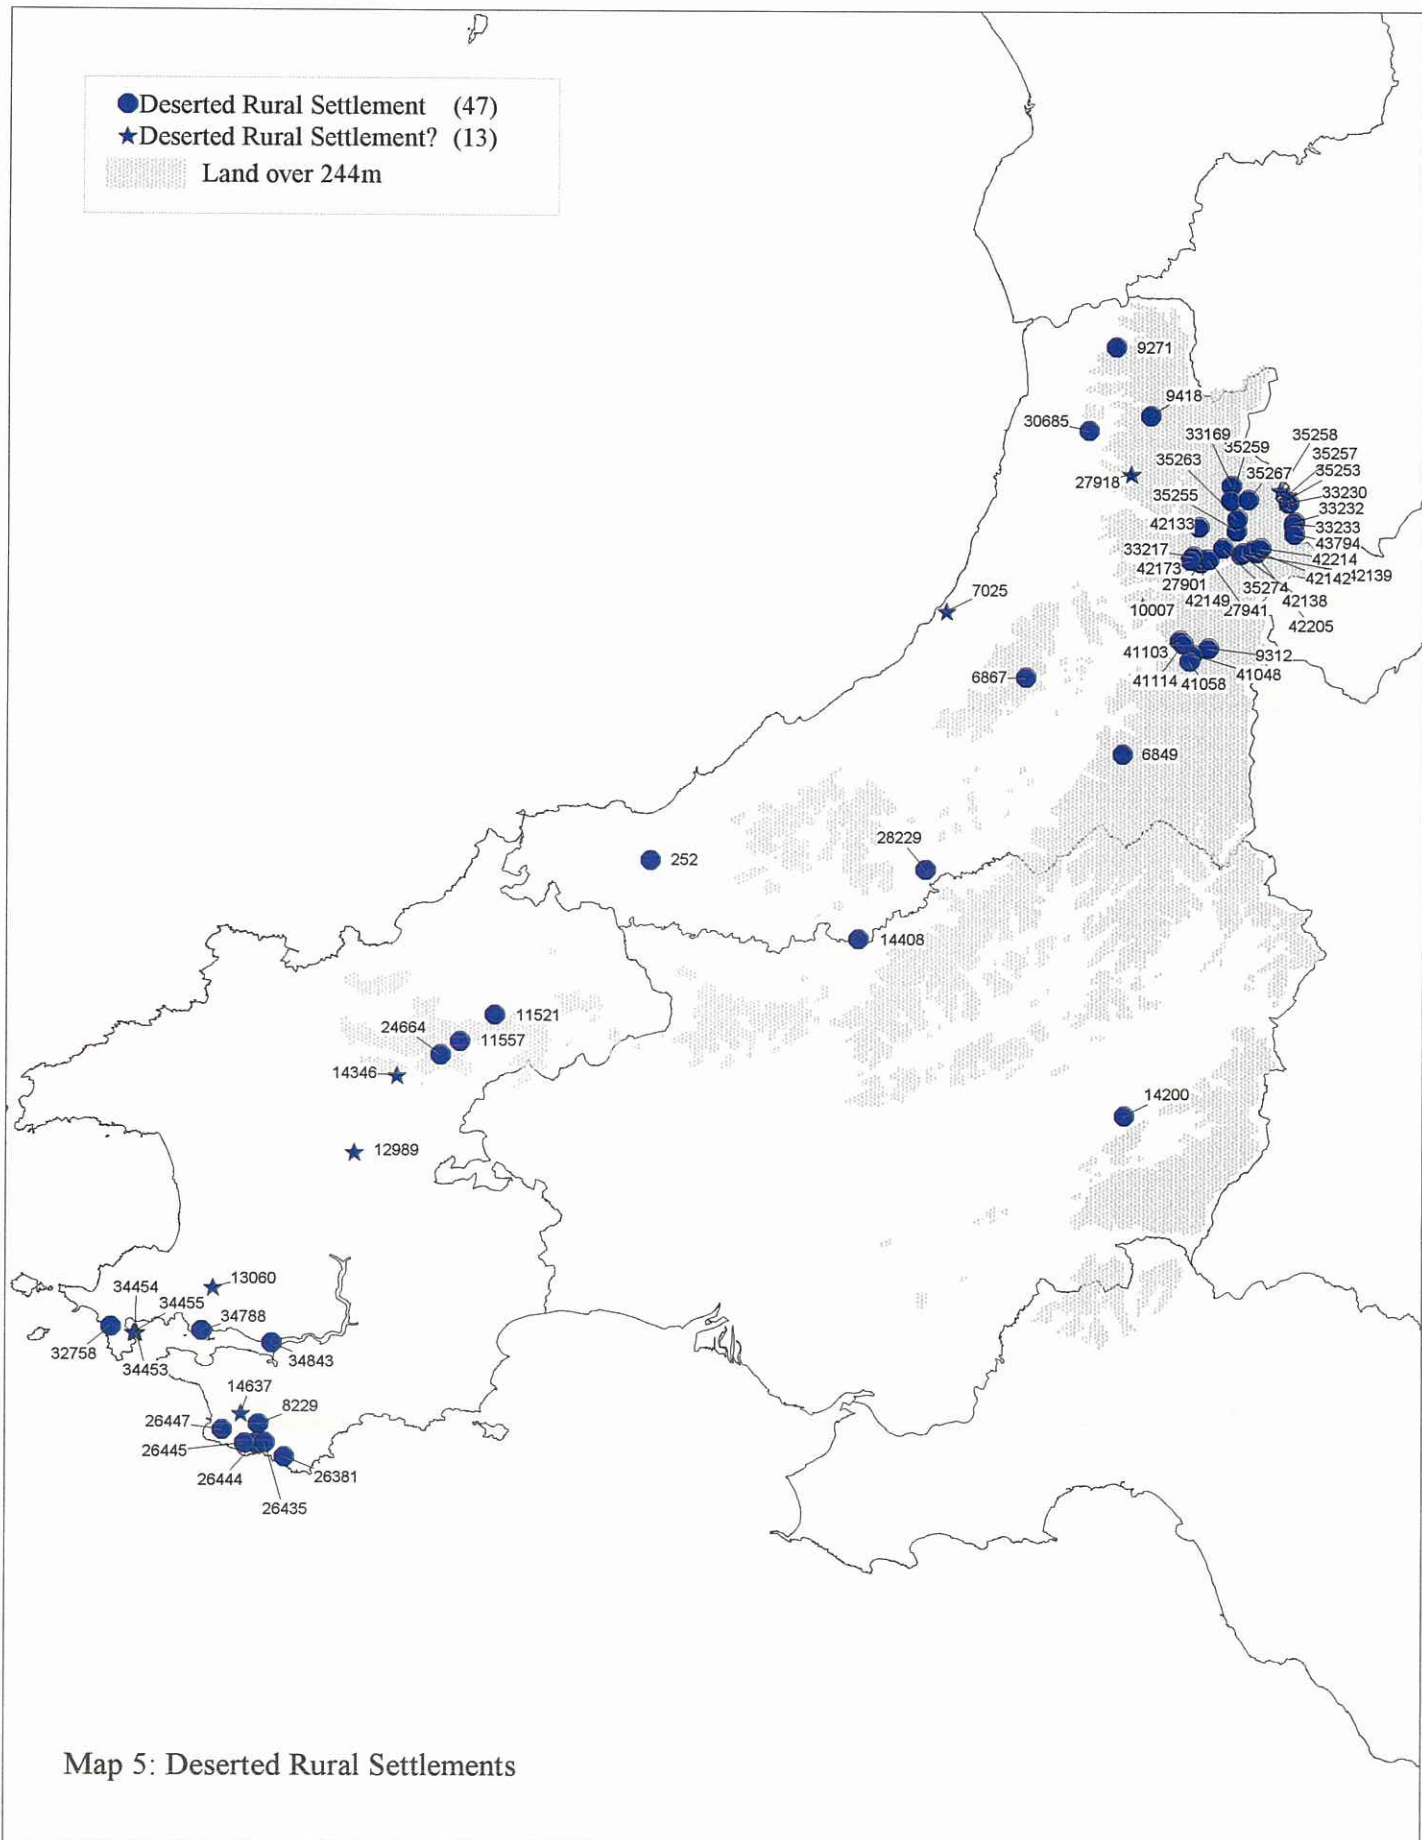

Detailed comment on the significance of the distribution pattern revealed in these maps must await the assessment of those sites in Carmarthenshire and South Pembrokeshire in 2003-4. However, some general observations on the distributions shown by each map can be made.

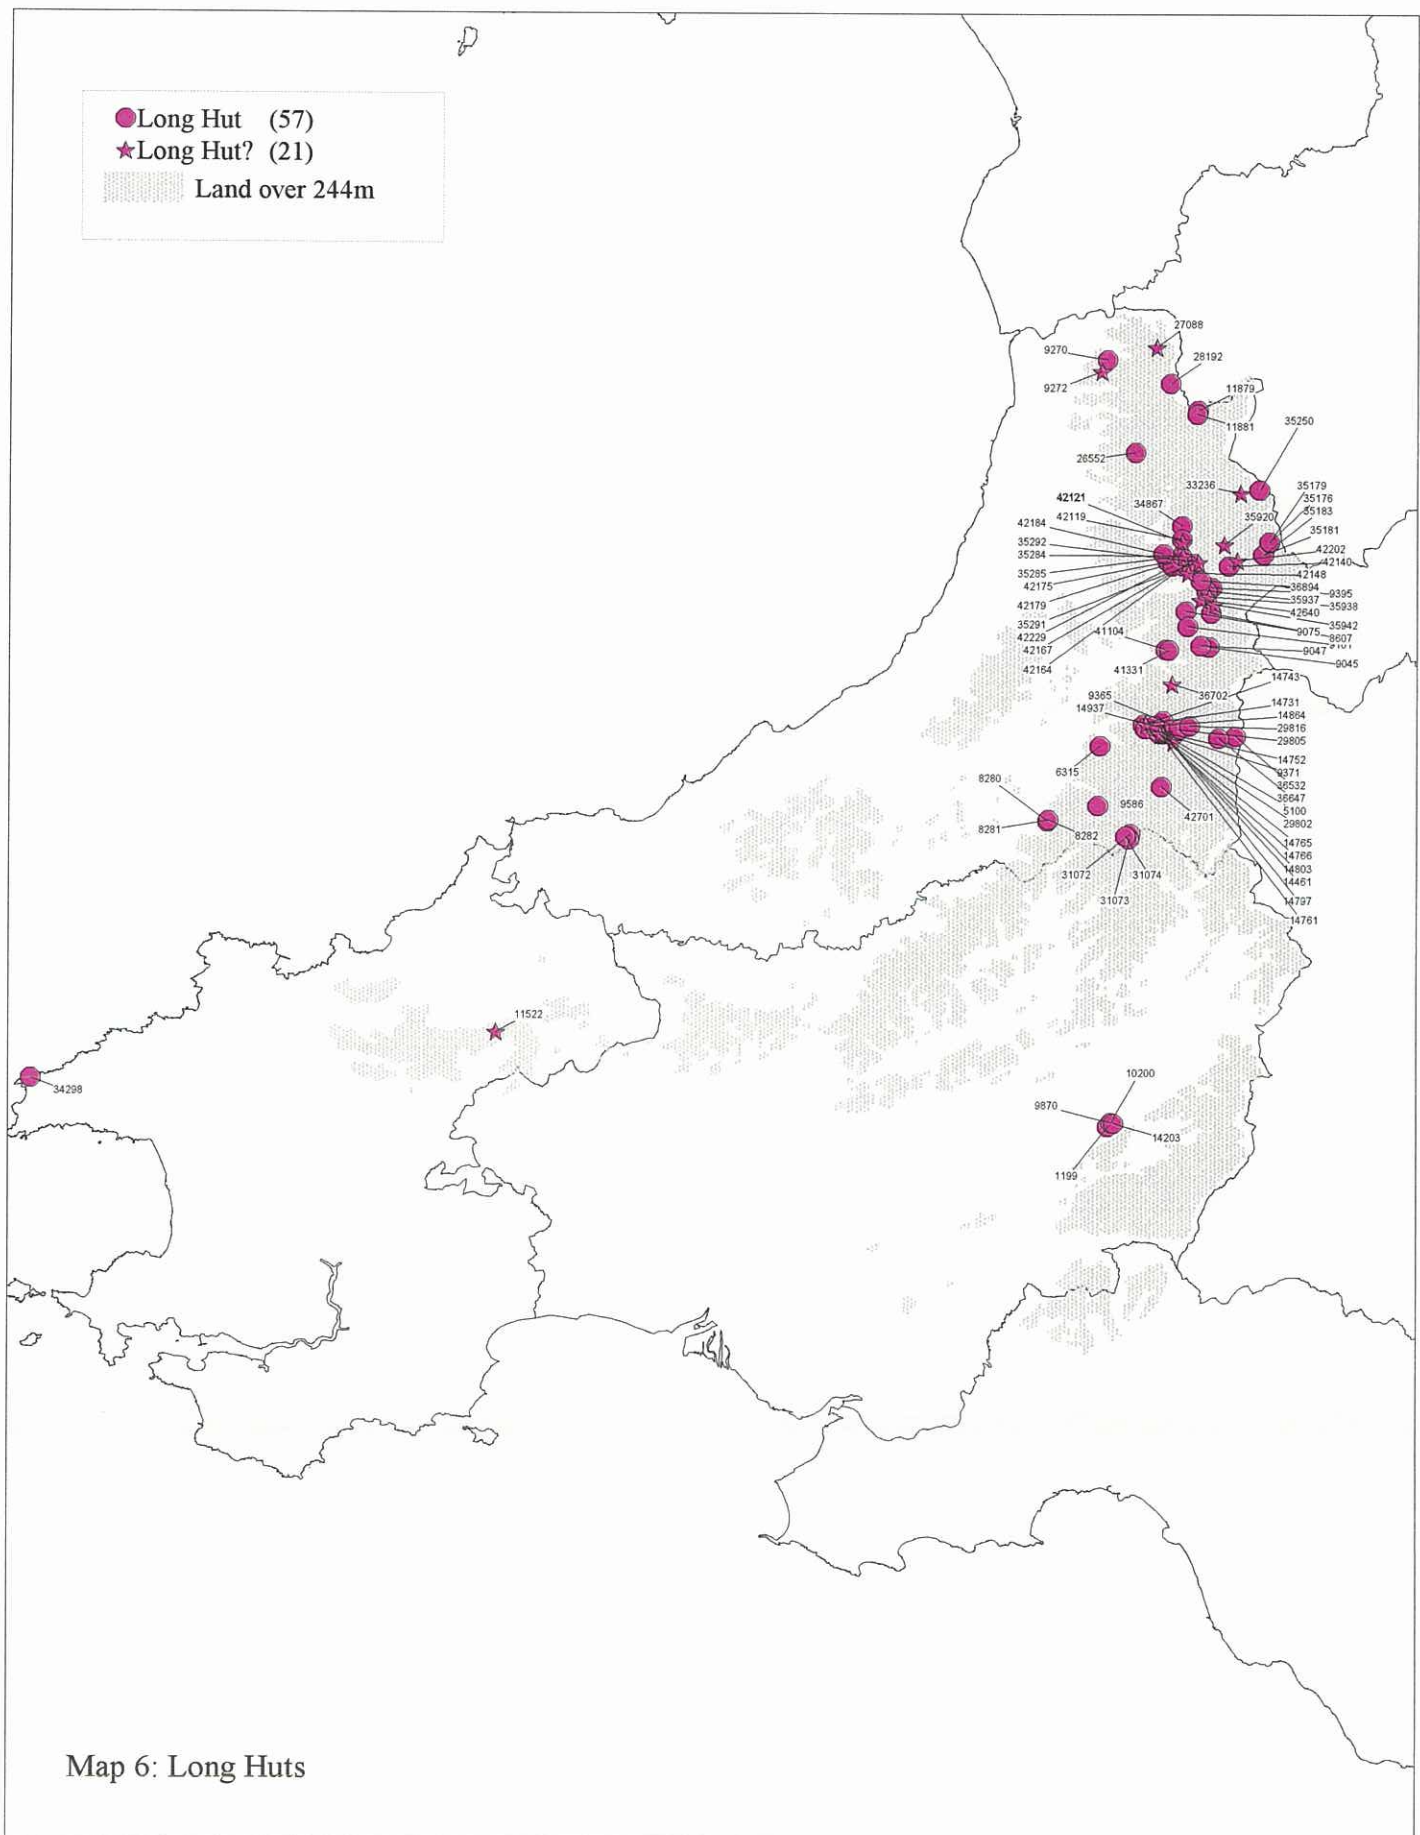

Map 5 shows sites recorded as Deserted Rural Settlements. These sites will mostly be complexes of settlement related features. It is considered important that the relationship between features recorded in the field is reflected within the SMR. Hence a site where a platform, shelter and fold are found in close association and reasonably interpreted as being contemporary and associated, they will each be allocated a unique record number. However, the whole complex will also be recorded as a DRS and allocated its own unique record number. This does cause some unavoidable duplication of recording within the SMR.

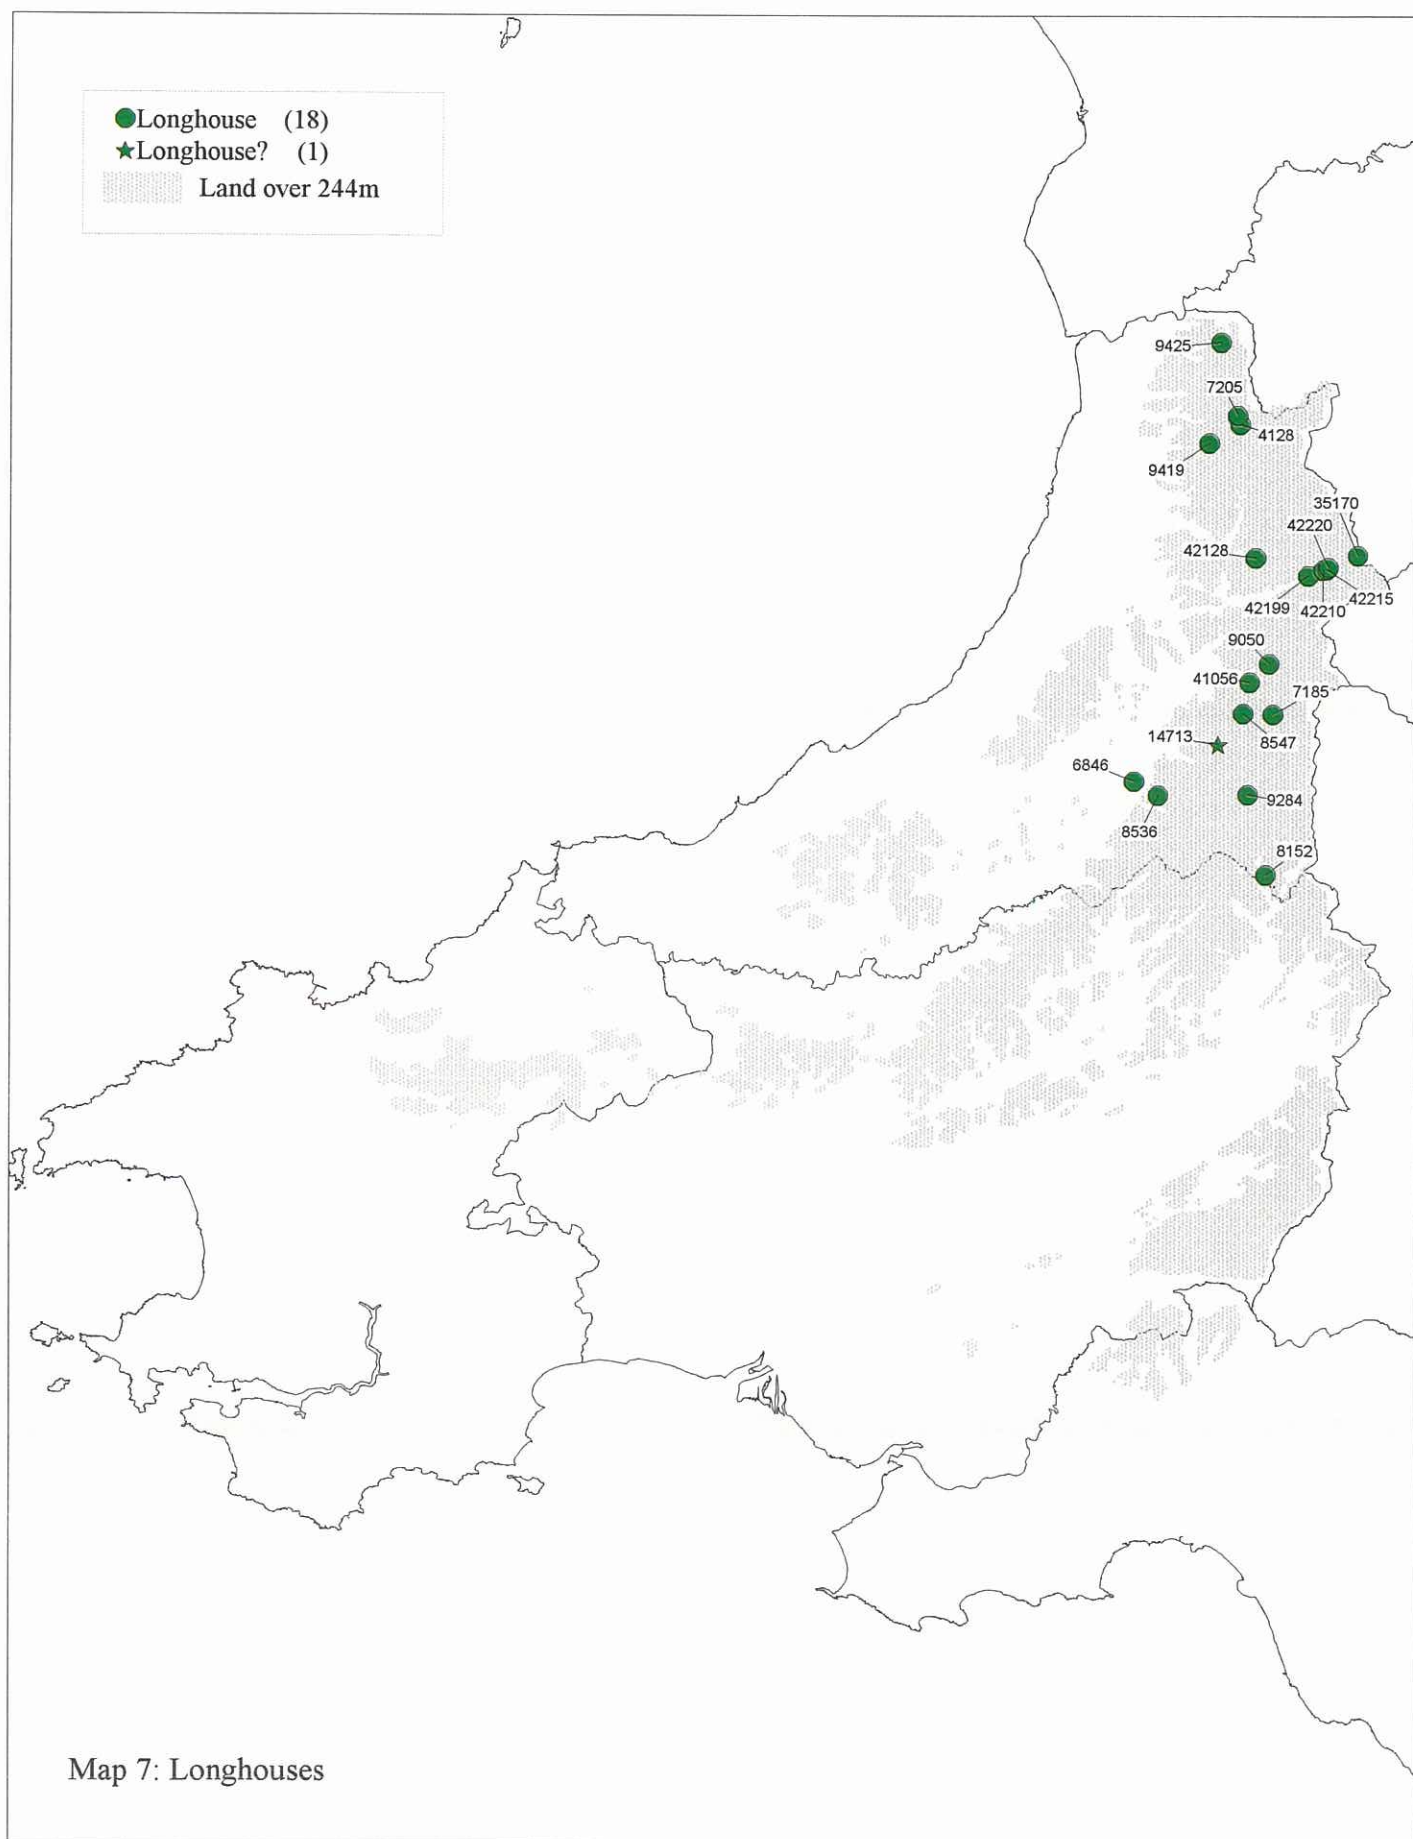

Map 6 shows that the distribution of long huts is clearly concentrated in the upland areas of Ceredigion. It is possible that this reflects a tendency to use long hut to describe a ruined sites that might be described as acottage in a lowland context. Surface evidence alone suggests that this may be the case. However, archaeological excavation could help differentiate between upland and lowland sites that appear, superficially at least, to share many similar characteristics.

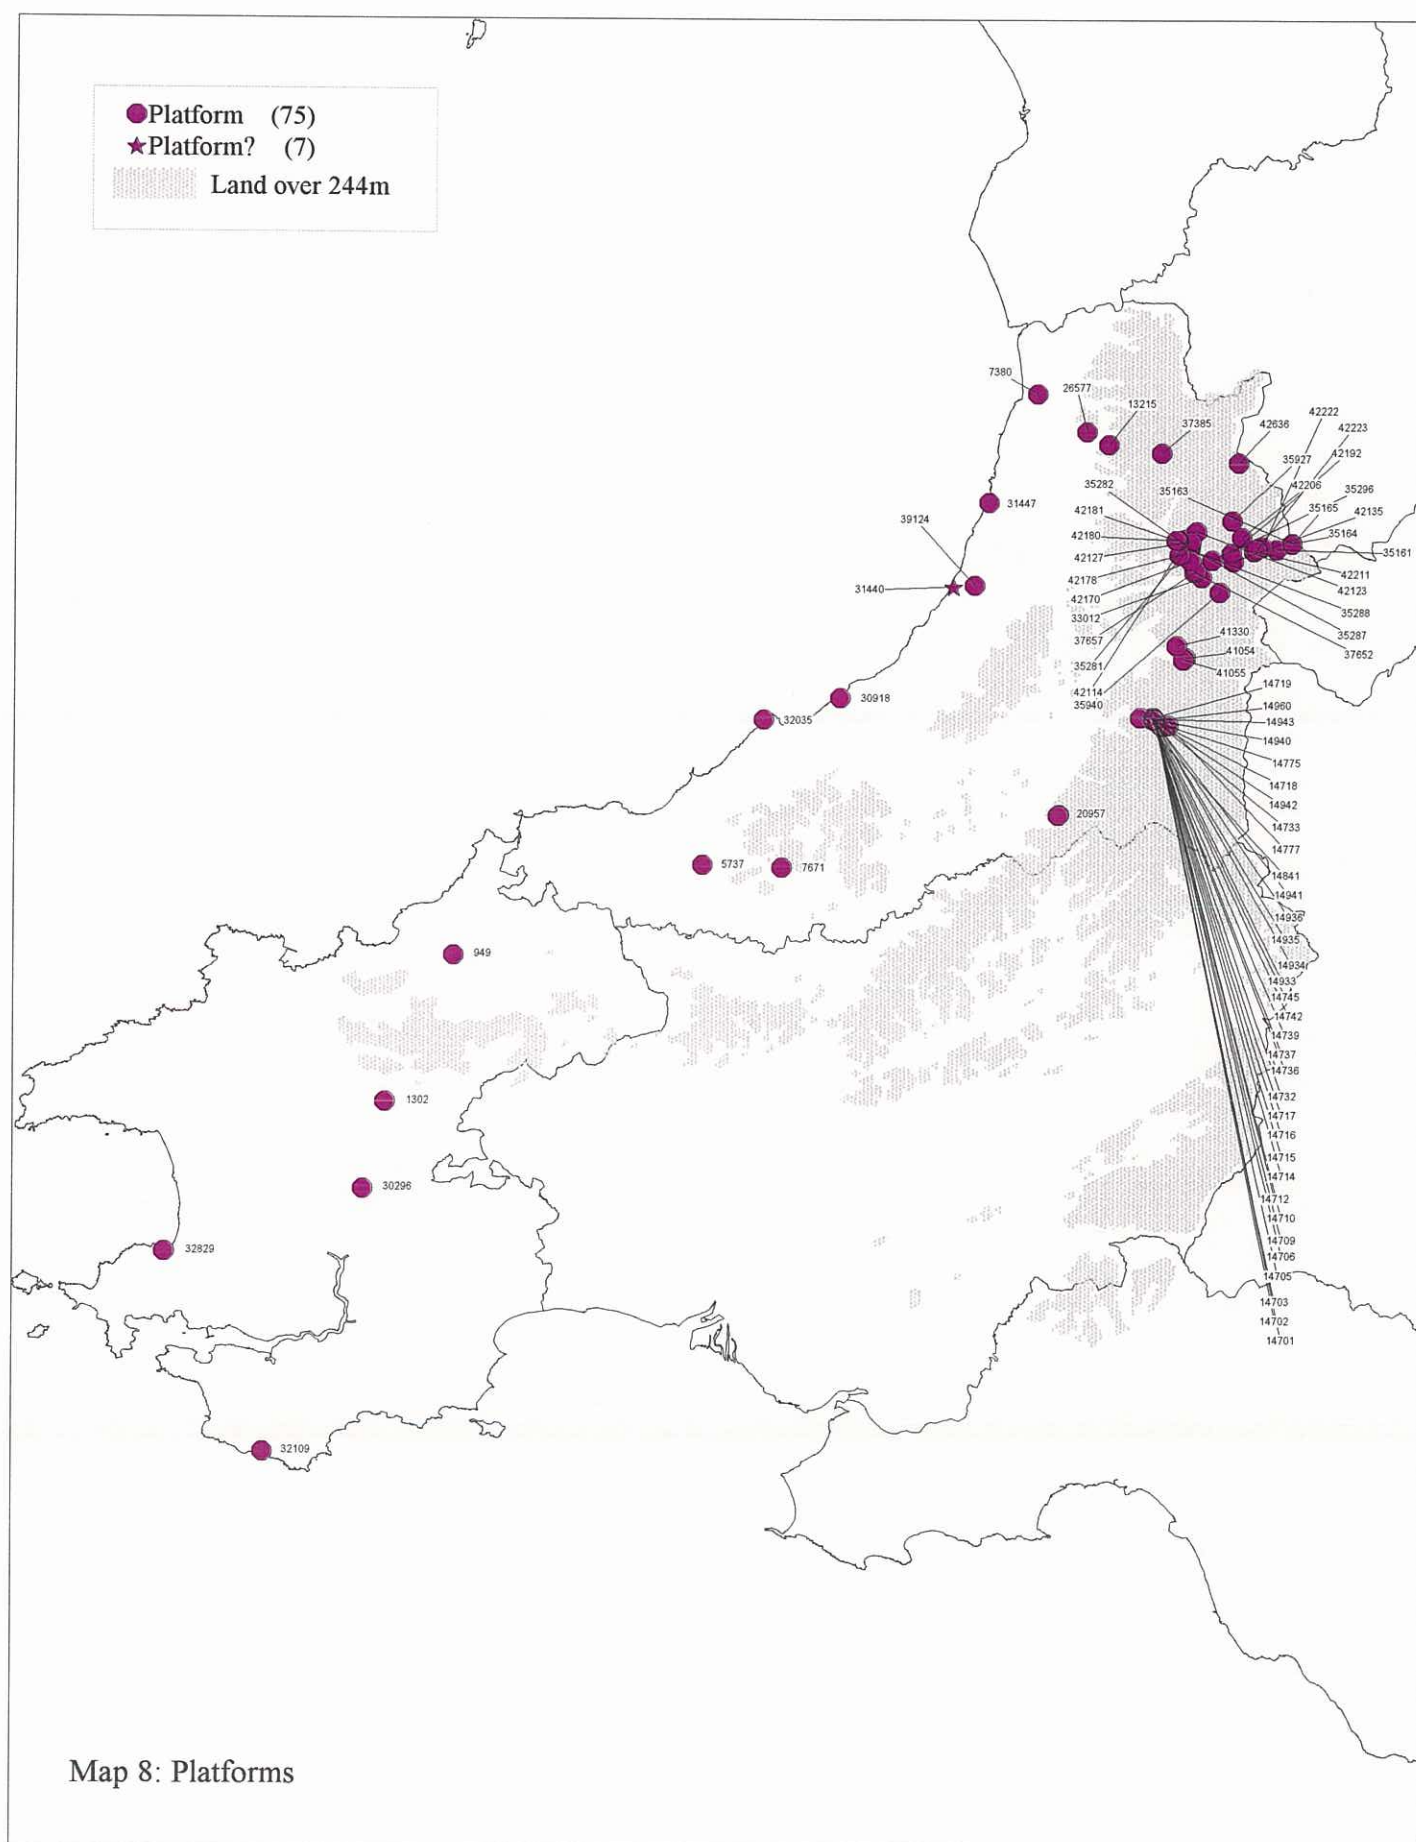

Map 7 shows a similar pattern for the distribution for longhouses. It is likely that this distribution shows that traditional longhouses in the lowland areas of the region remain occupied or in use as farm buildings and therefore do not fall into the classification of "Deserted Rural Settlements."

Map 8 shows a wider distribution of platform sites, although these too are predominantly found in upland contexts. Again, this is felt to reflect the influence of previous work that has been concentrated in upland areas. On the basis of surface evidence, a platform is a platform, regardless of its purpose. Some platforms may have been the sites of timber houses, others of timber buildings that had non-settlement purposes. Other platforms in upland and marginal contexts may well have been the sites of peat stacks or hayricks. The archaeological excavation of a number of platforms in varying contexts and of varying dimensions will be needed to clarify such issues.

4. Site analysis

The enhancement of the SMR record for Deserted Rural Settlement sites included the gathering of information regarding the landscape context and condition of each site, in the hope that more informed comment could be made about their purpose and also assist in their future management.

The following tables reflect the information now recorded in the SMR with regard to the condition of, and threats to, the DRS resource studied in 2002-3, as well as the landscape context of each site.

4.1 Condition

Table 9 records the condition of the 239 DRS sites assessed by the project. The following definitions are currently used by Cambria:

- A - Intact
- B - Largely intact
- C - Ruined
- D - Ephemeral
- E - Destroyed
- F - Renovated (recently introduced and not applied to this project)
- R - Restored
- V - Varying condition (applied to complex sites with component features in varying states of preservation)
- U – Unknown (those sites classified in the U category are all listed in Table 3 above)

The use of the condition code has not been consistent in the past. Therefore, it is particularly useful, in reassessing recorded sites, to correct or update the site's condition record. Indeed, sites recorded as A or B 20 years ago may have decayed significantly and may need redefining in the C or even D category.

No sites are classed as being of A condition. This category should not be applied to any deserted rural settlement, as deserted sites are by definition not intact, they are abandoned and at best derelict.

It can be seen that 192 sites (80%) are within the B or C category. B category sites will usually include building remains and/or complex features in relatively good condition. Importantly, this shows that most of the sites encountered have good surface preservation and can be easily interpreted in terms of their surface extent and component elements. Their sub-surface archaeological evidence remains unrecorded, however, and the condition classification in no way reflects the archaeological value or potential of these sites. Some category D sites may prove to have greater archaeological and historical importance than category A or B sites.

Table 9: Site type v Condition

	A	B	C	D	E	V	Total
DESERTED RURAL SETTLEMENT	0	1	26	9	1	10	47

PLATFORM?	0	5	2	0	0	0	7
Total	0	42	150	35	2	10	239

4.2 Threats

The field visits have allowed an assessment to be made of potential threats to the continued survival of individual sites. As Tables 10-12 show, the 239 sites assessed during 2002-3 are largely threatened by agricultural activity. However, the majority faced a low level of threat, and most had no perceptible short or medium term threat.

This very much suggests that the sites visited are mostly found in stable environments, within which little is likely to change. It must be emphasised that few such areas exist in the rural environment in reality, as sudden changes of land management practice, whether from the direction of agriculture, environmental schemes or forestry plantation can occur.

Perhaps the most important output of the project is the enhanced the record that now exists. This firstly informs any future site-specific evaluation that might be taken in advance of any proposal for development made through the planning system. It also means that some form of record is available for every site even if they are ultimately lost to future erosion.

Table 10: Type of Threat

Long Term	185
Medium Term	28
Short Term	2

4.3 Landscape Context

Tables 13 – 16 are derived from the field within the SMR structure that records details relevant to landscape context. However, this information was not always available for those sites assessed by the desk-based review only.

Table 13 suggests that there is a preference for locating settlements on hillslopes or valley slopes. This accounts for 134 sites or 56% of the total. A further 24 or 10% of sites were located on Natural Terraces, invariably found on hill or valley slopes.

Table 13: Topography

Topography	Number of Sites
Cliff Top	1
Coastal Plain	3
Coastal Plateau	2
Flood Plain	1
Hill Slope	60
Hilltop	1
Level Ground	1
Local Summit	3
Natural Terrace	24
Ridge	2
River Terrace	15
Saddle	4
Streamside	21
Undulating	1
Valley Base	16
Valley Slope	74
Not Assessed	10

Table 14 reinforces the tendency for deserted settlements to be found on sloping ground, perhaps for drainage reasons, although in most cases the degree of slope was defined as being gentle.

A relatively high number of sites were also found on Moderate or Steep slopes. Although drainage may well have been a factor for the location for these sites as well, it is also possible that steeper slopes provided advantages in terms of viewpoints and shelter.

Table 14: Nature of slope

Nature of Slope	Number of Sites
Flat	25
Gentle	100
Moderate	64
Steep	37
Not Assessed	13

This point is further reinforced by the tendency to locate sites towards the middle of a slope (60%), indicated by Table 15. This puts settlements above watercourses but also below the more exposed higher slopes. Even on flat river terraces, the middle of the terrace seems to have been favoured, rather than the water's edge. However, changes in river and stream courses can give a false indication of the original position.

It is possible that those sites located in exposed positions at the top of slopes represent seasonal rather than permanently occupied sites.

Table 15: Location on Slope

Location on Slope	Number of Sites
Bottom	37
Middle	144
Top	43
Not Assessed	15

Table 16 provides what are perhaps the most surprising results. Previous work by Cambria has suggested that deserted settlement sites favoured sheltered locations. This undoubtedly remains true of many sites in the uplands. However, the evidence collected during 2002-3 shows that almost an equal number of sites were in sheltered and exposed locations.

Many of the sites visited faced the prevailing winds or were open to the sun with 110 sites (46%) facing the south and southwest and a further 23 (9%) facing southeast. Another 46 (20%) sites faced westwards. With only 60 sites (25%) facing generally northwards or eastwards, it does appear that favour was given to facing the sun and the prevailing winds, rather than sheltering from both.

Table 16: Shelter

Position of Site	Number of sites
Exposed	107
Sheltered	117
Not Assessed	15

Although some general trends can be picked out of such statistics, it remains important to treat each deserted settlement site as a unique site, with its characteristic features tailored to meet the requirements of those who built and occupied the site. The challenge to understand the purpose and significance of individual sites remains.

Description	Traditional Welsh longhouse described thus in 1975; "It is claimed to have an inscription (covered over) above the later central entry , reading BUILT 1772/REBUILT 1882. The house is classically sited into the slope, drop from the house floor level to that of the cowhouse, which shows considerable traces of rebuild. The old house was one story with mortarless walls, but (presumably in 1882) the whole structure was raised and a new doorway inserted, making the house symmetrical. The old entrance is, however, still the only one in daily use. The upper room (the parlour) when recently redecorated, revealed traces of a crude wall-painting, wavy black lines on a white background." RPS September 2001; Still occupied. Modern restoration has taken place. RR March 2003

Description	Described in 1975 thus: "Excavations during the spring and early summer (1975) exposed a small building 4 x 7.25 metres, with clay walls on stone footings, within an enclosure of at least 850 square metres. The lack of a definite hearth within the structure, combined with the small size, makes it debatable whether the living quarters have yet been located. Pottery consisted of Buckley and North Devon ware. the latter included gravel tempered ware and sgraffito, dated to 1640. Stamped clay pipes were found of the period 1650-1700. Several flints were recovered, one being worked, and may possibly indicate prehistoric use of the site." RPS September 2001; Topographically interesting, with possible fluvioglacial banks/scarps present in the landscape. There are low-lying linear features that appear to be former boundaries and a possible enclosure. There is no indication of a building or building platform. The lane is very badly drained - there is a drainage ditch on the NE boundary and a stream on the southern boundary. RR March 2003

Description	A deserted settlement site described as a longhouse when fully excavated by LAS Butler in 1963. The site later become flooded by the Nantymoch Reservoir. When the reservoir level was temporarily lowered in 1984 the site was revisited by Briggs & Murphy (Archaeology in Wales 1984, p. 31). "The building measured 30 x 11.5 ft, with walls 3.5 ft wide, and stood on level ground close to the Camddwr. No artefacts were found. It was interpreted by Butler as a Lluest, with a possible secondary use as a peat-cutting shelter. It was dated within the period 1550-1750." RPS September 2001

Description	Described by OS in 1978: "A mediaeval or later longhouse is situated... upon a natural shelf against a north-west facing pasture slope, at 950 feet above OD. The house is orientated N-S and measures, internally, 4m x 3m, but the tumbled drystone walls, spread and turf-covered are from 3.0 to 4.0m in width, and from 0.6 to 0.8m in height, so that the true dimensions of the house are nearer 7m x 5m, allowing a wall width of the normal 0.8 to 1m. The entrance is in the south-east side. A contemporary field bank curves from outside the south corner of the house uphill in an easterly direction for 150m, and there are traces of cultivation on the hill slope to the south-west. Modern field clearance stones are heaped around the site on the west and south." RPS September 2001; The landowner informed fieldworkers that this site has been destroyed by land improvement, but it was not viewed to confirm if any archaeological features may in fact survive.

Description	Described by the RCAHM in 1976. Noted as a barn that was the site of a former dwelling, but there is no building shown at this National Grid Reference on the 1964 6" OS map. RPS September 2001;A rectangular platform terraced into a river bank immediately adjacent to a stream/leat and a culvert (measuring 4.5m x 12m circa). Little remains of any building associated with the platform but there is much stone and glacial gravel on the platform itself. This may be remnant building material (alternatively it could be up-cast from cleaning out the adjacent stream/leat/drain). The ground immediately to the west of the platform has much dumped stone and general rubbish dumped on it and is lower than the platform. It could be an associated building but I was unable to gain access to assess it properly (boundary fence in the way and no permission). National Grid Reference amended from SN53596960. Views	Long views to the southwest and southeast. Across the valley towards forestry, north and northwest. Restricted to the northwest and west by uphill topography		
Description	First described by George Williams in 1977. Situation clearer in 1996. The features occupy the sides of the saddle between ? and the hill to the south in an area of reseeded pasture. On the eastern side of the saddle at least three lynchets were seen - very plainly because of the angle of the sun they were also present on the west side also but were less clear here in the light conditions. Pace Williams 1977; They do not appear to be the result of modern ploughing. George Williams. 1996.; Probably not a building platform as such. The area of land is a strip between two fields which has been fenced off and deciduous woodland has been planted. There is a now dry stream which is orientated SE-NW. An 8m x7m (approx) platform has been terraced into the slope (at the new grid ref). However, I think this has more to do with irrigation/ sewage than the former platform for a building. The land slopes down fairly steeply from SE to NW. National Grid Reference amended from SN621893. RR March 2003

Description	Deserted rural settlement site of uncertain character which include a dwelling, outbuilding and enclosure. Location on upland riverside terrace suggests this may have been a "lluest" type settlement. RPS October 2001; A ruined cottage or small farmhouse on the west side of a stream. A large central compartment, flanked by small cells on a level terrace. The walls are up to 1.25m high and are of drystone construction. There exists a possible ruined/destroyed outbuilding on the opposite side of the stream which looks disturbed. Land Use amended from Forestry. RPS December 2002.

Description	Derelict longhouse recorded by UCWL in 1979. Details of precise nature not available - presumably a farmhouse or other building within a farmstead complex. RPS October 2001; Here is a longhouse, now converted to agricultural use but still retaining many original features. The main building comprises a carthouse, stable, dwelling and a barn which measures approx. 30m by 6m (NNW-SSW long axis). Also a lower lying cowshed measuring 15m by 6m (circa) added on at the northerly end. There is pitched stone/cobbling approx 1.10m wide along the frontage (east side). A pigsty in excellent condition is attached to the north end. Windows have been added/modified. Doorways in the cowshed have been blocked and converted to window openings. This needs to be recorded/surveyed. National Grid Reference amended from SN65995814. RR March 2003

Description	Small deserted settlement including two small rectilinear buildings, one within a semi-circular drystone fold. Stand on a sheltered, south facing natural terrace. RPS August 2001;The Deserted Rural Settlement includes a Long Hut measuring 8m E-W by 5.5m (SN1366633616). It has low wall bases, grassed over, with some protruding stones. There is a large stone slab in the centre. There is an enclosure around the Long hut, springs off a rocky outcrop. It is defined by a low bank with stones protruding. The enclosure is not wholly defined, as the bank appears to run off to the West. This diversion was not investigated further. A small fold has been added to the Eastern end of the larger enclosure. Site Type amended from Stone Foundations-rectangular-stones. Period amended from Unknown. Land Use amended from Heath. RPS October 2002.

Description	Described as "enclosures and rectangular hut", this site may well be a mediaeval or later deserted settlement site. RPS August 2001; This is an area of complex, unrecorded archaeological remains which include an apparent cairnfield, rectangular enclosure and hints of a field system in the form of low banks with occasional protruding stones. Within the enclosure, at National Grid Reference SN1066231332 Altitude 294m, is a small long hut measuring 5.5m N-S by 3.5m. 5m to the south of it is another, built against the enclosure bank. Site type amended from Enclosure-stone foundations. Land Use amended from Heath. RPS October 2002.

Description	Described by Briggs & Murphy in 1984 thus: Long hut. Sited on a terrace of the R. Rheidol. It is rectangular, measuring 9m x 4m, and stands 5 courses high, with its lower part buried to a depth of 0.5m in peat. The tops of further subsidiary buildings or field boundaries are just visible through the peat. The site may be prehistoric, although is it is more likely to be mediaeval or post-mediaeval. It is sited some 18m below the top of the reservoir and unlikely to be uncovered in the normal "tidal cycle." RPS October 2001

Site Status			
Siting	Valley slope/Gentle/Middle/Exposed		
Aspect	South Facing	Orientation	E-W
Proximity			
Views	Fairly good views south to the opposite valley side, beyond railway line - obscured by trees though.		
Description	Earthworks at Pentypark though to possibly show the site of an earlier house. This is an unconfirmed theory. RPS July 2001; The owners of the land say that the field name at this location is Old Hengoed. The earthworks are rectilinear:- possible building platforms with drainage gullies/ditches (now mostly dry). The largest "platform" is approx 22m N-S by 25m E-W. Defined on its south and east sides by up-cast banks with ditches. There is no evidence for structures in the form of stone or other building debris. To the south of the larger platform, on the other side of the resultant ditch, are other linear earthworks, probably indicating enclosures. There are earthworks, nebulous but real, to the NE of the larger platform. To the SE and East is a possible hollow-way or stream with well established entrances to the adjoining field (now fenced off and heavily overgrown). It is badly drained and boggy now. (This probably confirms RPS theory of Med. or early Post Med. Farmstead?/earlier dwelling etc.). National Grid Reference amended from SN013213. Form/Condition amended from Documents. Altitude amended from 75. RR October 2002.

Description	Sub-rectangular earthwork bank/platform, the NE side being the present hedgebank. The platform is about 35m by 17m. It is at the maximum c 0.8m above the surrounding field on its S corner. The hedgebank that bounds it to the NE was formerly the S side of the hollow-way. In 1993 the trench for an electricity cable passed through this earthwork. On the SE side the bank seemed to be composed of topsoil. Within the earthwork topsoil was up to 500mm thick and there were a few cobbled size-stones at the base of it perhaps even an in-situ cobbled surface. Two walls perhaps of mortared stone were cut through by the trench. There was also a small quantity of late-mediaeval and early post-mediaeval pottery some bone and cockle limpet and oyster shells. At the NW corner of the earthwork there seemed to be a silted-up of infilled ditch and a possible midden c 40m to the W of the earthwork. On a map of c.1780 the earthwork seems to be enclosed by some form of boundary while the hollowing mentioned above was still in use. K.Murphy.

Description	Seen in the side of an electricity trench 1993. A wall of well-constructed dry-stone of rounded blocks of limestone. These foundations cut into the silt-clay subsoil. Width of wall c.0.8m. To the W of wall 3m away a small patch of cobbling-rounded limestone-set just beneath the bottom of the topsoil. Some 30m to the E of these remains was a rubbish pit 1.5m across 0.4m deep filled with a dark loamy soil and many stones with a layer of limpet shells and some bone. This field in which these remains were found is known as Upper Layton. Could they be the remains of the 'lost' farm known as Layton? K.Murphy.

Description	Platform, double, sub-oval, lower 5.2 x 3.4m, upper, 5.6 x 5.1m, some stone. G. Williams, May 1993. Williams description suggests this to be a building in the long house tradition, with split floor levels. RPS October 2001; This has the appearance of a typical Longhouse arrangement, although it would have been a timber structure rather than stone. The "platforms" are bare with no structural evidence. The floor surface is relatively steeply inclined to the SSE and the step from the upper cell to the lower is of c.1m. This may be the focal point of the minor features to the west and south on this hill. National Grid Reference amended from SN72276019. Descriptive Type amended from Platform-suboval double. Form/Condition amended from Earthwork. RPS October 2002

Description	A small farmstead complex of buildings and boundary banks. Evidence for lazy beds on R & F.(TAJ.19.5.89);The "Garden" plot on the south-east side of the house has a well defined stone boundary (with walled trackway to the NE), is grassed and has deciduous trees. The raised beds area to the north and NE of the house are lush green grass but everywhere else there is reed growth and bracken. Drainage is not good between the dwelling and the stream (some 120m to the SE) - although the trackway is clear. The thick bracken growth to the south and southwest covers a complex of stone bounded enclosures. This was difficult to assess fully because of bracken but does extend for 200+ metres on both sides of the stream. (Afon Syfni). National Grid Reference amended from 07293058. Descriptive Type amended from Earthwork. Form/Condition amended from Earthwork/U. RR October 2002.

Description	In 1837 on the Tithe Map the "Homestead" stood on the site at the Grid Reference given overleaf. By 1864 on the 1:2500 1st Ed. OS map this site had been abandoned and the "Homestead" apparently transferred to PRN No 26370. This latter site was a cottage in 1837 known as "Midland". The site is now very overgrown with blackthorn scrub and it is not clear if the site of the cottage remains undamaged. There are some stone-built field walls in the area of the cottage but there has also been some small-scale quarrying. K.Murphy 25.01.93.

Description	Site of Quarpool or Gorpoo Farm. Site cleared in about 1822. First mention of the farm by name is in a rental of 1725, but was originally probably included under the holding known as Southrow. A.James 1993.; Site lay immediately to the N of a small quarry (26464). An electricity cable trench passed through this site. Though there is no surface evidence for the farmstead, the trench revealed that foundations and other elements are buried at a depth of at least 1m. Walls, mortared and bonded with clay other stonework and domestic debris were recorded set within a buried soil. This soil and building remains is covered by clay and debris of recent date. Pottery from the site is of 17-18th century date. K.Murphy.

Description	The earliest reference to Linneyrow is in 1623 and by 1838 it had been abandoned in preference to Penyholt Farm, PRN 9907. JH Sept 1999 based on Murphy,K 1993; This site was abandoned by the time of the Tithe Survey or rather no longer used as the main farmstead, its place being taken by Pen-y-Holt, PRN 9907, 300m to the south. The Tithe Map of 1838 marks a building as the site of Linneyrow. Site now in a dense growth of blackthorn. Low rubble walls and earthworks can be traced, but these cannot be examined in detail because of the blackthorn. The site has been damaged by a military track. K.Murphy 1993

Description	This site consists of the foundations of a longhouse (externally 12x6m)... the foundations are constructed of large boulders which are particularly noticeable on the downslope "gable" wall. The building was partitioned into two rooms internally. K.Ray & J.Thorburn 1988; Amended to long hut as there doesn't appear to be a step down from one compartment to the next within the structure, therefore the term longhouse seems inappropriate. RPS October 2001; This site was not found at this National Grid Reference in 2002. The National Grid Reference must be incorrect.

Description	A building of unknown purpose is shown at this location on the Original OS Surveyors Drawings. Now in forest plantation. RPS October 2001; A 3 celled drystone building. The largest cell is the westernmost and measures c.8m x 8m. The front wall of this cell has collapsed, therefore it cannot be said if it was a cottage or an agricultural building. It did appear to have two doorways on that side however. The other two cells are much smaller and appear to have been added later. The walls still stand up to 2m high and appear to be bound with lime mortar. The purpose of the building is unknown, but it could be an agricultural building rather than a dwelling. It is set on a platform cut into the slope. National Grid Reference amended from 738938. Form/Condition amended from Documents/U. RPS October 2002

Description	The Deserted Rural Settlement complex includes an impressive longhouse defined by prominent earth and stone wall bases. Appended to the longhouse is an enclosure defined by a substantial earth bank, which is actually part of a substantial boundary bank which runs across the Cae'r Meirch farm holding and appears to be a significant historic boundary. There is a small pond in the lower part of the enclosure which may originally have been created to water animals. To the south-west, upslope, is a discrete area of ridge and furrow cultivation and a small shelter which may be associated with the Deserted Rural Settlement here.

Description	The site lies on rough pasture on the edge of a coastal slope. It consists of a platform 5 x 8m x 0.3m high. It is approximately rectangular, but curved to follow the edge of the slope on the north-west. There is further disturbance to south-west. The feature is possibly natural or possibly disturbance associated with water or sewage pipes running to the south-west of the feature. Of little importance. No apparent threat. No recommended action. George Williams. 1995.; There are many rectilinear features here, but they are ephemeral and difficult to assess on the ground.

Description	The site lies in a pasture field on ground sloping to the west. The site consists of a sub-rectangular platform, 7m across, cut into the slope upslope and terraced downslope. The site may be a round house or a long hut but is not wholly convincing. There is a possible similar feature 25m to the north-east near the entrance to the field. No particular threat. Survey. George Williams. 1995.; Saw no platform here. There is a lot of soil creep occurring, giving the appearance of platform like or terrace features. RR February 2003

Views	West to the sea, NW to Aberystwyth and up the valley to the east.		
Description	In a pasture field at the front of a steep slope to the south to the rear of a dune. The site consists of a square platform cut into the hillside, 8m square, with a further narrow platform (1m across) at a higher level to the south. An upcast bank surrounds the whole on the west and south. If the feature were found in the uplands it would be interpreted as a long hut. The slight upslope shelf and the surrounding bank are paralleled. A ? old field to the south, 31448, may be associated. An important site. There is a potential threat from reseeding. Survey and schedule. George Williams. 1995.; Williams is describing a platform, not a long hut. RPS October 2001; A rectangular, embanked platform/enclosure. The platform is terraced into the hillside/valleyside at the point where it meets the valley bottom. It has been embanked on its east, west and south sides - the north (valley bottom side) remains open. The earthworks on the east and south sides are circa 1m high, turf covered and in relatively good condition. However, fresh subsidence has taken place and slumped onto the platformed interior. The earthwork and platform is bi-sected by a fence and the feature is only barely traceable on the western side of the fence - although it definitely continues. Some stone lies in situ on the west side of the fence indicating the possibility of a former building. It is impossible to characterise this though. National Grid Reference amended from SN57747963. Views	Extensive views out to sea to the north and 180 degrees. Southerly view is restricted by the hill slope.		
Description	The site lies on ground sloping to the west. The area supports grass. A field boundary runs downslope to link together field boundaries. This is not shown on modern maps but is shown on the 1st edition 6". Half way between the two is a semi-circular platform measuring 5 x 2 m across. This appears to interrupt the boundary which suggests it is relatively recent although in other contexts it would be interpreted as a building platform of some antiquity. North (downslope) of the platform a further bank (not shown on any map) runs diagonally downslope on either side of the platform to join up with the lower field boundary. Of little significance. No further action recommended. GEORGE WILLIAMS. 1995.; A levelled platform measuring approx 4m by 4m, terraced into the hillside and at the joining of two old field boundaries. The cliff path cuts across this feature and there is a National Trust sign "Craig Yr Adar" on the west side. A series of former field boundaries survive on the cliff top (down slope) to the north and northeast. No building stone or other building remnants are in evidence. RR February 2003

Views	South along Nant Rhys valley		
Description	This site represents the earliest of two dwellings at Nant Rhys, and was replaced during the 19th century by the surviving cottage to the west. Despite some disturbance caused by planting and subsequent felling in the vicinity, the outline of a rectangular building, presumably the dwelling, measuring c.11m x 5m, are still clearly visible and potentially of archaeological significance. It is possible that the structure has been partially robbed of stone on its northern side to construct a modern sheep dip nearby in that direction. A large sub-circular enclosure which is seen on Ordnance Survey maps to the east of the dwelling has been damaged by earlier forestry operations, although some relatively well preserved portions of the enclosing drystone wall still stand at its eastern edge. The relationship of the dwelling to this large enclosure suggests this to have been an upland shepherding station since early post medieval times, possibly with medieval roots. The precise characteristics of this site are not easily understood due to the presence of a large amount of brash across the area.

Description	A deserted rural settlement which includes a ruined dwelling with an enclosed yard to its western side and an enclosed garden plot a short distance to the east. The dwelling is a drystone, rectilinear structure, sub-divided by an internal wall into two compartments. It measures overall c.11m x 5.6m, the walls rarely more than about 0.5m high. Possible traces of a hearth are visible in the western end of the structure. Abutting the western end is a small enclosed yard or fold measuring 6.3 x 6.0m. 8.5m beyond the eastern end of the dwelling is a probable garden plot, irregular in shape and about 22m in length. Its width is indeterminable as its northern side has been lost to stream erosion, although it was certainly over 12m wide at its eastern end.

Description	Long rectangular platform aligned east to west. Levelled area slopes slightly to the east and measures 27.5m E-W x 9.0m, cut into the slope to a depth of 1.5m on the west side and built up to a height of 0.5m on the east side. The location of a building which formerly occupied the platform is defined by a rectangular earth and stone bank 1.0m wide x 0.2m high. The dimensions of the building would have been 21.5m E-W x 6.0m. west end of platform slightly disturbed by later trackway. Very probably contemporary with the platform PRN 35164, situated 20m to the south. RH CPAT 20/05/97 These platforms may be the site of the long lost Hafod yr Abad, one of the four hafodau of the Cwmystwyth monastic grange. 17th and 18th century sources in National Library of Wales name Hafod yr Abad along with Nant y Gafod and Diliw, which are both a short distance to the north of these platforms. During a visit by RPS, LA and Richard Hankinson of CPAT in May 1998, it was noted that an old trackway connects the area of the Allt platforms with Nant y Gafod. RPS August 1998

Description	Nant y Gafod is named in early 16th century Strata Florida Abbey rent rolls as one of the abbey's upland farmstead holdings. Rectangular building with 3 compartments, drystone walling, gable ends on evidence of collapsed material against each shorter wall. Aligned almost east-west, down the slope walls survive to a height of 1.7m. Main compartment at east (lower) end; chimney and fire place against west wall (on basis of amount of collapse); entrance on NW angle gives lobby entrance, also another doorway at east end. Edge stone on N side supports bulging wall - second (middle) compartment has no obvious entrance. Third compartment has walling of inferior quality, entrance at SE angle.

Description	Ruinous rectangular stone building, 7.3m WNW-ENE x 4.0m x 0.6m. Situated on a rocky spur overlooking stream. Aligned WNW-ENE. Building divided into 2 cells by an outcropping rib of bedrock which appears to have been augmented by drystone walling. ESE cell has lost some stones at its ESE end due to collapse of the very steep rock scarp down to the stream. Entrance to ESE cell is on NNE side. WNW cell has been severely eroded on its WNW end by a now dry stream meander; the WNW wall appears to have been entirely lost. Walls 0.8m wide x up to 0.4m high. Dividing natural rib 0.6m high x 1.5m wide. Could possibly have measured 11.0m WNW/ESE prior to stream erosion. RH CPAT 10/06/97

Description	Substantial single cell rectangular building, now ruinous, measuring 8m N-S x 6.5m x 1.0m. Aligned approx. N-S. Entrance probably on E side where a wall has been revetted into the slope. An area of tumbled stone and debris possibly associated with a spur of walling on the NW side suggests that a later building, subsequently demolished, lay on that side. A possible building lies to the SW, but has been largely destroyed by a trackway joining the Cwmystwyth-Llangurig road. Possibly a precursor to farmstead 35182 which lies 100m to the south. Description	Probable abandoned shepherds dwelling located alongside stream. Its precise character is difficult to determine from surface remains; it may be either a dwelling with two compartments or a single room dwelling with an appended animal pen. Some drystone walling survives in the north-eastern compartment, but the south-western end of the structure is defined by more reduced earthwork banks. Like many of the lluestau or shepherds dwellings of the district, the site is located on a terrace alongside a minor upland stream, afforded some shelter by the sides of the stream valley. Its location alongside a rough forest trackway which has already caused some peripheral damage to the site means that it is certainly vulnerable to any widening of the trackway in the future.

Views	Down Myherin valley to west.		
Description	Less than 100m to the south-west of the present cottage at Blaen Myherin there appears to be the site of an earlier dwelling, represented only by a fragment of drystone walling built into a natural bank, but apparently including an old hearth. The OS Original Surveyors Drawing (OS, 1820) suggests that this was the position of Blaen Myherin farmhouse in the early 19th century. Blaen Myherin is potentially one of the most important and historic settlement sites within the uplands of the Mynydd y Ffynnon study area due to the fact that it is listed in mid-16th century rent rolls describing properties rented out by the Strata Florida estate to tenant farmers. It is possible therefore that this is the site of the early post-medieval or even medieval dwelling at Blaen Myherin.

Description	A long house recorded by J Jones but not visited as part of Forest Enterprise Welsh Heritage Assets survey. JH 09.02.2000; Rectilinear enclosure comparable to that at Hafod Oidas in the Cwm Mwyro valley. This example has well preserved banks (some breaches). No evidence was seen of any associated dwelling. It may be a medieval hafod site. This would explain the name of the nearby settlement of Hafod Newydd. The banks appear to be stone and earth but they are heavily grassed over. National Grid Reference amended from 7565063800. Period amended from Post Med?. Form/Condition amended from Documents/U. RPS December 2002

Description	A long hut identified by J Jones in 1982. Little remained of the site when CAP visited in 1998. JH 10.02.2000 based on CAP 1998; This well-preserved long hut is defined by drystone wall bases, measuring 1m in width and less than 0.3m in height. Large building stones, many have tumbled inside the structure. On the south side, rough coursing is visible up to 0.75m high on the external face. It is probably 14m or 15m long, but the east half is obscured by trees growing inside the house. Period amended from Post Med?. Form/Condition amended from Earthwork/D. RPS November 2002

Description	A long hut noted by J Jones in 1982. When the site was visited by CAP in 1998 only a few stones remained. JH 14.02.2000 based on CAP 1998; Nothing was found at this National Grid Reference or in the immediate vicinity in 2002. This location is a steep and rough slope, an unlikely location for a long hut. It must be concluded that the National Grid Reference is incorrect or that the structure has been destroyed since visited in 1998.

Views	Northwards to Penlanfawr and also Tai Newyddion.		
Description	Possible Deserted Rural Settlement complex. All that was visible was a sunken shelter cut into slope, an L-shaped earth bank which may be one side of an enclosure, and possibly the site of another structure with a stone component, elements of which could be seen within an area of dense reed growth - the reeds obscured any detail.

Aspect	SW		
Proximity			
Views	To southwest towards Tai Newyddion and Cwmystwyth		
Description	Terraced platform measuring 8m x 5m with the earthwork outline of a building measuring 7 x 4m visible on it. Wall bases of the building c. 1m wide and less than 0.2m high. A drainage hood and gully are visible on the upper end of the platform. This Deserted Rural Settlement faces SWW and is on ground markedly better as pasture than much of the surrounding mountain ground - suggesting that the site was carefully selected for settlement, and/or that it was improved during the period of settlement.

Views	Along Upper Ystwyth valley in either direction.		
Description	Nant yr Onnen is shown on the parish tithe map of 1847 but not on the earlier OS Original Surveyors Drawing, surveyed c.1815. Ruinous fragments of the house and a possible ancillary building are visible at the edge of the Nant yr Onnen stream, apparently part of the site has been lost due to landslip caused by stream erosion. Immediately to the west are the lazy bed garden plots which were originally associated with Abernant, another deserted settlement which is located 100m downslope. Abernant had been abandoned by 1847 and it seems that Nant yr Onnen took advantage of the garden plots previously associated with that settlement.

Description	A Deserted Rural Settlement complex which has been damaged by land improvement. Surface features are not distinct enough to make any attempt at describing the component features of the complex, but it is possible that archaeological evidence survives which would allow some interpretation of the site's characteristics. There appear to be one or more enclosures and possibly a long hut present here. Some surface stone is visible, derived from disturbed banks and walls. The complex sits on a NW facing mid-slope terrace. A trackway (PRN 42174) clearly runs SW from the terrace.

Views	Restricted in part, but with views to the upper Ystwyth valley to the east.		
Description	2-celled longhouse situated on a very restricted, sheltered natural terrace overlooking the Cwmystwyth lead mine site. Access is difficult and it may be that mining carried out since the longhouse was occupied has further isolated the terrace. Overall measurement 11m E-W x 5.2m. Low, grassy wall bases through which some stone slabs protrude. The upper end of the longhouse has an external drainage gully to keep water out of the structure. 10m to NE was a small and crude stone bridge - now only indicated by revetting either side of the stream bank. This may be related to later industrial activity.

Description	Longhouse measures 12m N-S x 5m. Two compartments of equal dimensions, the floor level northernmost or upper compartment being slightly higher than the southernmost. This indicates that the lower compartment was probably the animal byre, the upper being the living area. At the southern end of the E lateral wall, there is a small D-shaped ancillary structure, built onto or immediately alongside the longhouse. The longhouse stood on a slight building platform, with a drainage gully cut around the upper end to prevent water flooding through the building. The building was at least partly stone built but all walls have been ruined, possibly deliberately pushed down. The longhouse stands on the banks of the Afon Stwc stream on a broad, slightly sloping terrace facing S-SW. There may be some cultivation ridges faintly visible 20m SW of the house.

Description	This platform is just 5m to the SW of the longhouse at Blaen Nant Stwc. It measures 13m N-S x 5.5m. Some stones are present on the platform and the bases of lateral walls running N-S either side of the platform, about 4m apart. The N end is cut slightly into the slope, whilst the S end is a positive platform and its S edge is revetted. It would appear that this is the building platform of a structure which may have been ancillary to the long hut.
