

COMMENT	AUTHORITY
"The third stone, which is of sandstone, is a small circular stone, 1 1/2" in diameter. The hole in its centre is 1 1/4" in diameter. One face has markings from hole to circumference dividing the stone into eight equal parts. The obverse has nine similar, but irregularly placed, markings. Along the outer edge of the stone, which is 1/2" deep is a shallow groove running the whole of the length of its periphery" Found in Teifi side, cards (NB far left of illustration)	IC Peate Arch. Camb. 1925 p. 205-6 T. Card. AS 1926 p. 79-80
Macehead? in NMW? (formerly UCW Aberystwyth)	Griffiths in BA Finds: card W-CD-4
Griffiths seems to have got the idea that this is in UCW Museum, the articles he quotes in Arch. Camb 1925 + T Card AS 1926 do not state that.
