

25 An arrangement of four uprigths & one crosspiece eroding out of the alluvium at the point where Swan Pool Drain / Ashburnham's Canal meets Pill Town.

30 The crosspiece was in situ within
 31 the eroding edge. It may be that the
 32 structure was a bottle-type structure,
 33 although there was c. 0.4m difference
 34 in height between the crosspiece and
 the tops of the uprigths - so it was
 not fully established.
