The OS ① have recorded that the 1909 excavation by Treherne + Robinson and the 1921 excavation by Congreve + Gordon-Williams were conducted on the same tumulus PRN 3912. However a reading of the excavation reports ②③ show that this is in error and that the earlier excavation (1909) ② was conducted on the tumulus PRN 3912 and the later (1921) ③ was conducted on the tumulus PRN 3913	① OS Record Card SN218E 11 1967 ② GGT Treherne TCASFC 1913-14, vol. 9, p. 54-5 ③ JP Gordon-Williams TCASFC 1925, vol. 10, p. 27-8
The round barrow is situated at the edge of a field used for grazing cattle. It has been ploughed 'once over the last few years' (info from Mr. Jenkins Jr) and nothing was found. It measures c 20m in diameter and 0.80m in height and is very spread by ploughing GP. 62-4 → N	JLWac 27/2/85
