

COMMENT

AUTHORITY

There is a stone lying close to the north hedge of this field just to the east of a gateway. It is of sandstone and well smoothed. It is an irregular quadrilateral at the base and tapers slightly towards the top. Measurements L: 1.48m W: 0.58m Th: 0.28m Presumably this is PRN 8038 - there are no traces of any other archaeological features in this flat pasture field. See DRF for map showing position.
