Plate 50. View of Trichrug, looking south-west from Twynllanan.	69

Summary

In February 2023 Archaeology Wales (henceforth – AW) was commissioned to carry out an archaeological desk-based assessment ahead of a scheme of proposed woodland creation at land at Tan y Lan, Bethlehem, Carmarthenshire SA19 9DR (NGR SN 70144 23871)

There were 181 previously recorded sites of heritage/archaeological interest within the 1km study area, including three Scheduled Monuments, three Listed Buildings and a Registered Landscape. Of the 181, ten lie within the bounds of the proposed development area all comprising non-designated assets of post-medieval date. Seven new sites were identified within the proposed development boundary as a part of the current assessment. These include holloways (TAN01-03), field systems (TAN04-06) and areas of ridge and furrow (TAN07).

The proposed development sits within three HCLAs, Garn-Wen (226) and Bethlehem (225), which are part of the Tywi Valley Registered Landscape, and Trichrug (231), which is part of Black Mountain and Mynydd Myddfai. The proposed impact on HCLA 225 is considered to be Negligible. The proposed impact on HCLA 226 is considered to be Moderate. The proposed impact on HCLA 231 is considered to be Minor. The visual impact of the development on the setting of the Tywi Valley Registered Landscape is considered Minor. There will be no visual impact to the Black Mountain and Mynydd Myddfai Registered Landscape.

Three Scheduled Monuments lie within 1km of the proposal development and there are a further six within the 3km study area. Two Scheduled Monuments will be indirectly impacted by any development these are Garn Goch Camps (CM037) and Trichrug round cairns (CM327). the various forest areas. It is considered that the proposed development would result in a Minor impact of the setting of Garn Goch Camps and a Negligible impact on CM327.

Three LBs are located within 1km of the proposed development and a further nine lie within the 3km search area. Only the three closest Listed Buildings, all part of Crug Glas farmstead (LBs 21972, 21973 and 21974) would be visually impacted by the development proposals. It is considered that these impacts would be Negligible.

Of the ten previously identified assets and seven newly identified assets within the bounds of the proposed development, one includes the HLCA 226 discussed above and another PRN51438 has been erroneously located. The remaining eight fall within areas of existing woodland and buildings or existing field boundaries. Therefore, there will be Negligible short term impact on these assets although there is the potential for these to suffer deterioration over time due to the impact of roots.

Of the seven newly identified sites, the holloways (TAN01-03) again fall within areas not subject to proposed planting so will have a Negligible impact by the proposals. The field systems (TAN04-06) would also remain intact but could also potentially be impacted in the longer term by root damage. It is considered that the development will

have a potential Moderate impact on the ridge and furrow (TAN07), however, it is considered that the development would have a potential Minor impact on any sub-surface remains within this part of the site.

The existing field boundaries, boundary banks, drystone walls and hedgerows which are as depicted on the tithe map could have been established in the medieval period, although the irregular nature of some of the boundaries may suggest prehistoric origins. The design of the proposals appears to respect the current boundaries, however, there is the potential for minor isolated impact if the existing field entrances need widening for machinery or for other requirements. To mitigate the impact of these possible impacts, an archaeological watching brief should be carried out on any potential intrusive works that are required across the existing boundaries if required.

Crynodeb

Ym mis Chwefror 2023 comisiynwyd Archaeoleg Wales (o hyn allan – AW) i gynnal asesiad desg archeolegol cyn cynllun i greu coetir arfaethedig ar dir yn Nhan y Lan, Bethlehem, Sir Gaerfyrddin SA19 9DR (NGR SN 70144 23871).

Roedd 181 o safleoedd o ddiddordeb treftadaeth/archaeolegol a gofnodwyd yn flaenorol o fewn yr ardal astudiaeth 1km, gan gynnwys tair Heneb Gofrestredig, tri Adeilad Rhestredig a Thirwedd Gofrestredig. O'r 181, mae deg o fewn ffiniau'r ardal ddatblygu arfaethedig i gyd yn cynnwys asedau heb eu dynodi o'r cyfnod Ôl-ganoloesol. Adnabwyd saith safle newydd o fewn y ffin ddatblygu arfaethedig fel rhan o'r asesiad presennol. Mae'r rhain yn cynnwys ceuffyrdd (TAN01-03), systemau caeau (TAN04-06) ac ardaloedd cefnen a rych (TAN07).

*Mae'r datblygiad arfaethedig o fewn tri HCLA, Garn-Wen (226) a Bethlehem (225), sy'n rhan o Dirwedd Gofrestredig Dyffryn Tywi, a Trichrug (231), sy'n rhan o'r Mynydd Du a Mynydd Myddfai. Ystyrir bod yr effaith arfaethedig ar HCLA 225 yn **Ddibwys**. Ystyrir bod yr effaith arfaethedig ar HCLA 226 yn **Gymedrol**. Ystyrir bod yr effaith arfaethedig ar HCLA 231 yn Fân. Ystyrir mai **Mân** effaith weledol y datblygiad ar osodiad Tirwedd Gofrestredig Dyffryn Tywi. Ni fydd unrhyw effaith weledol ar Dirwedd Gofrestredig Mynydd Du a Mynydd Myddfai.*

*Mae tair Heneb Gofrestredig o fewn 1km i ddatblygiad y cynnig ac mae chwech arall o fewn ardal yr astudiaeth 3km. Bydd dwy Heneb Gofrestredig yn cael eu heffeithio'n anuniongyrchol gan unrhyw ddatblygiad, sef Gwersylloedd Garn Goch (CM037) a charneddau crwn Trichrug (CM327). y gwahanol ardaloedd coedwig. Ystyrir y byddai'r datblygiad arfaethedig yn arwain at **Mân** effaith ar leoliad Gwersylloedd Garn Goch ac Effaith **Ddibwys** ar CM327.*

*Mae tri LB o fewn 1km i'r datblygiad arfaethedig ac mae naw arall o fewn yr ardal chwilio 3km. Dim ond y tri Adeilad Rhestredig agosaf, pob un yn rhan o fferm Crug Glas (LBs 21972, 21973 a 21974) fyddai'n cael eu heffeithio'n weledol gan y cynigion datblygu. Ystyrir y byddai'r effeithiau hyn yn **Ddibwys**.*

O'r deg ased a nodwyd yn flaenorol a saith ased newydd a nodwyd o fewn ffiniau'r

*datblygiad arfaethedig, mae un yn cynnwys HLCA 226 a drafodwyd uchod ac mae PRN51438 arall wedi'i leoli'n anghywir. Mae'r wyth sy'n weddill o fewn ardaloedd o goetir ac adeiladau presennol neu ffiniau caeau presennol. Felly bydd effaith fyrdymor **ddibwys** ar yr asedau hyn er bod posibilrwydd y bydd y rhain yn dioddef dirywiad dros amser oherwydd effaith gwreiddiau.*

*O'r saith safle sydd newydd eu nodi, mae'r ceuffyrdd (TAN01-03) unwaith eto yn dod o fewn ardaloedd nad ydynt yn destun plannu arfaethedig felly ni fydd y cynigion yn cael fawr ddim effaith. Byddai'r systemau caeau (TAN04-06) hefyd yn parhau'n gyfan ond gallai hefyd gael eu heffeithio yn y tymor hwy gan ddifrod gwreiddiau. Ystyrir y byddai'r datblygiad yn cael effaith **gymedrol** bosibl ar y gefnen a'r rhych (TAN07), fodd bynnag, ystyrir y byddai'r datblygiad yn cael effaith **Mân** bosibl ar unrhyw weddillion is-wyneb o fewn y rhan yma o'r safle.*

Gallai'r ffiniau caeau presennol, cloddiau terfyn, waliau sychion a gwrychoedd sydd fel y'u dangosir ar y map degwm fod wedi'u sefydlu yn y cyfnod canoloesol, er y gall natur afreolaidd rhai o'r ffiniau awgrymu tarddiad cynhanesyddol. Ymddengys fod dyluniad y cynigion yn parchu'r ffiniau presennol ond mae potensial am effaith ynysig fechan os oes angen lledu mynedfeydd presennol y caeau ar gyfer peiriannau neu ofynion eraill. I liniaru effaith yr effeithiau posibl hyn, dylid cynnal brîff gwylio archeolegol ar unrhyw waith ymwthiol posibl sydd ei angen ar draws y ffiniau presennol os oes angen.

1 Introduction

- 1.1.1 In February 2023 Archaeology Wales (henceforth – AW) was commissioned to carry out an archaeological desk-based assessment ahead of a scheme of proposed woodland creation at land at Tan y Lan, Bethlehem, Carmarthenshire SA19 9DR, centred on NGR SN 70144 23871 (Figure 1).
- 1.1.2 The purpose of the desk-based assessment, which is detailed in the following report, is to provide Dyfed Archaeological Trust - Heritage Management (henceforth – DAT-HM) with information on the potential impacts upon standing and buried remains of potential archaeological interest to ensure that they are adequately preserved or fully investigated and recorded if they are disturbed or revealed as a result of subsequent activities associated with the development.
- 1.1.3 All work will conform to the *Standard and Guidance for Archaeological Desk Based Assessment* (CIfA, 2020) and be undertaken by suitably qualified staff to the highest professional standards.

2 Site Description

- 2.1.1 The proposed development site encompasses an area of approximately 70 hectares (ha). The site is located on an area of higher ground approximately 6.5km to the east of Llandeilo and 4.5km to the south of Llangadog, centred on NGR SN 70144 23871.
- 2.1.2 The site and surrounding landscape is rural in nature and is characterised by enclosed field systems and isolated patches of woodland. Immediately adjacent to the site are the Scheduled Monuments of Garn Goch (CM037), Trichrug Cairns (CM327); both within 500m of the site as well as within the Character Area of Garn-Wen of the Registered Landscape of Outstanding Historic Interest Tywi Valley (HLW (D) 5).

3 Methodology

- 3.1.1 The primary objective of this desk-based assessment is to assess the potential impact of the development proposals on the historic environment. This will help inform future decision making, design solutions and potential mitigation strategies. The aim is to make full and effective use of existing information in establishing the heritage/archaeological significance of the site to elucidate the presence or absence of heritage/archaeological material, its character, distribution, extent, condition and relative significance.
- 3.1.2 The work includes a comprehensive assessment of regional context within which the heritage/archaeological evidence resides and aims to highlight any relevant research issues within national and regional research frameworks.
- 3.1.3 This report provides information of sufficient detail to allow informed planning decisions to be made which can safeguard the heritage/archaeological resource. Preservation in situ has been advocated where at all possible, but where engineering or other factors could result in the loss of archaeological deposits, preservation by record has been recommended.

3.1.4 This assessment considers the following:

a) The nature, extent, and degree of survival of heritage/archaeological sites, structures, deposits and landscapes within the study area through assessment of various readily available primary sources:

- Collation and assessment of all relevant information held in the regional HER at the Dyfed Archaeological Trust within a 1km buffer zone around the proposed development area.
- Collation and assessment of the impact on all Designated heritage/archaeological sites (Scheduled Ancient Monuments, Listed Buildings, Historic Parks & Gardens, Landscapes and Conservation Areas) within a 3km buffer zone around the proposed development area.
- Assessment of all available excavation reports and archives including unpublished and unprocessed material affecting the site and its setting.
- Assessment of aerial photographic (AP) and satellite imagery evidence.
- Assessment of archive records held at the County Archive in the National Library of Wales (NLW) and the Royal Commission on Ancient and Historical Monuments in Wales (RCAHMW).
- Records held by the developer e.g., bore-hole logs, geological/geomorphological information, aerial photographs, maps, plans and ztv data.
- Map regression analysis using all relevant cartographic sources e.g., all editions of the Ordnance Survey County Series, Tithe, and early estate maps (as available).
- Place-name evidence.
- Historic documents (e.g., charters, registers and estate papers).

b) The significance of any remains in their context both regionally and nationally and in light of the findings of the desk-based study.

c) The history of the site.

d) The potential impact of any proposed development on the setting of known sites of heritage/archaeological importance.

e) The potential for further heritage/archaeological remains to be present, which have not been identified in pre-existing archaeological records.

f) The potential for further work, with recommendations where appropriate for a suitable investigative and/or mitigation methodology.

3.1.5 In assessing the value of heritage/archaeological assets, and the potential impacts upon them by the proposed development, the terms and guidance used in the Design Manual for Roads and Bridges, Volume 11, Section 3 (Highways England 2007) has been utilised. Values are given as:

- Very High (World Heritage Sites and other sites of international importance);
- High (Scheduled Monuments, undesignated assets of schedulable quality, assets of National importance that can contribute significantly to acknowledged national research objectives);

- Medium (Designated or undesignated assets of regional importance that contribute to regional research objectives);
 - Low (assets of local importance, assets compromised by poor preservation or poor survival of contextual associations);
 - Negligible (assets with little or no surviving heritage/archaeological interest);
 - Unknown (the importance of the resource has not been ascertained).
- 3.1.6 The magnitude of the potential impact on the heritage/archaeological assets (which can be either positive or negative) is given as:
- Major (change to most or all key heritage/archaeological materials, such that the resource is totally altered; comprehensive changes to setting);
 - Moderate (changes to many key heritage/archaeological materials, such that the resource is clearly modified; considerable changes to setting that affect the character of the asset);
 - Minor (changes to key heritage/archaeological materials, such that the asset is slightly altered; slight changes to setting);
 - Negligible (very minor changes to heritage/archaeological materials, or setting);
 - No Change
- 3.1.7 This work conforms to the *Standard and Guidance for Archaeological Desk-Based Assessment*, as produced by the Chartered Institute for Archaeologists (CIfA 2021).

4 Archaeological and Historical Background

4.1 Previous Archaeological Studies

- 4.1.1 Fourteen previous archaeological studies are recorded within the 1km search area. None were carried out within the proposed development area, but four border the area.
- 4.1.2 A field survey was carried out by Cambria Archaeology Heritage Management (PRN56721) in order to assess any conservation issues relating to the Parks and Gardens of the Tywi Valley with the aim to develop management recommendations within a landscape strategy.
- 4.1.3 A desk-based assessment was carried out, relating to the farm buildings of the Tywi Valley (PRN62758), however, no further details on this report can be obtained.
- 4.1.4 Both PRN112712 and PRN112375 comprise management plans relating to Cwmcoy, which is to the south of the proposed site and Coes-Shon, located to the east.
- 4.1.5 In 2011 a report was carried out reconstructing late Holocene flood recording in the Tywi catchment (PRN100610). This report comprised the study of floodplain sedimentary sequences and reconstruction of long-term flood records.
- 4.1.6 A study was undertaken researching Late Quaternary river development in the middle Tywi valley (PRN102429) which involved geomorphological mapping, sediment coring and ground penetrating radar survey. One of the objectives of the work was to assess the impact of environmental changes on the preservation of the archaeological resource in the valley.

- 4.1.7 A record on the HER notes a Project under PRN100547 named Exploration Tywi but no further details are available.
- 4.1.8 A desk-based assessment was carried out by Trysor on land immediately to the northeast of the proposed development boundary (PRN114802) at Coedtalylan. A number of new sites were identified as a part of the assessment, largely comprising post medieval boundary walls and banks as well as a possible post medieval building platform associated with Carreg y Gath Farmstead.
- 4.1.9 In 2009 Dyfed Archaeological Trust carried out, with the aid of volunteers, the excavation of the site of a possible medieval longhouse to the southeast of Beili Dyffryn Farm and a Neolithic chambered tomb (PRN 99630) approximately 500m north of the current proposed development.
- 4.1.10 Also in 2009, Dyfed Archaeological Trust carried out investigations of the Llys Brychan Roman Villa site (CM195). These investigations (PRN99390) included an initial geophysical survey followed by a series of trial trenching outside of the scheduled area.
- 4.1.11 At Garn Goch a non-intrusive evaluation was carried out (PRN97106) in order to determine whether a geophysical survey of the interior of the monument was possible, the results of this work were not summarised within the HER enquiry.
- 4.1.12 In 1989 a field survey (PRN4681) of an area northeast of the Carn Goch hillfort was carried out in advance of agricultural improvement. The survey identified a relict field system as well as areas of peat and a number of more discrete sites.
- 4.1.13 In 1997 a pilot assessment of the archaeological and historic landscape (PRN49589) was carried out on twelve farm holdings in the Tir Cymen scheme. The assessment comprised a desktop study and rapid field survey of each farm to identify previously unrecorded sites in order to aid in the planning and management of these farms.
- 4.1.14 In the mid 1990s a field survey was undertaken (PRN34709) to identify, locate and describe all of the sites within Garn Goch by Brecon Beacons National Park. This resulted in 25 new sites being identified in this area of the landscape, most of post medieval date.

4.2 Identified sites of heritage/archaeological interest

4.2.1 There are 181 previously recorded sites of heritage/archaeological interest within the 1km study area (Figure 2, Table 1), including three Scheduled Monuments, three Listed Buildings and a Registered Landscape. Of the 181, ten lie within the bounds of the proposed development area all comprising non-designated assets of post-medieval date. Seven new sites were identified within the proposed development boundary as a part of the current assessment. These include holloways (TAN01-03), field systems (TAN04-06) and areas of ridge and furrow (TAN07).

Table 1. Sites of heritage/archaeological interest within the 1km study area

Reference Number	Site Name	Period	Type	Condition	Status	NGR
PRN104661		Post medieval	Cottage	Not known		SN70092486
PRN110635		Post medieval	Farmstead	Not known		SN7058224661

4.3 The Historic Landscape

- 4.3.1 The proposed development lies at the interface of two Registered Landscapes of Outstanding Historical Interest. Its northern extent lies within the Historic Landscape Character Areas (HLCA) of Garn-Wen (226) and Bethlehem (225) of the Tywi Valley (HLW (D) 5) Landscape and the southern part is within the HLCA of Trichrug (231) of the Black Mountain and Mynydd Myddfai (HLW (D) 1) Landscape. The north-western extents of the proposals bound Carn Goch (222), also of Tywi Valley (Figure 3).
- 4.3.2 The HLCA of Garn-Wen (226) is described by Dyfed Archaeological Trust in the Historic Landscape Characterisation Report *'as relatively small but quite complex as it lies between lower-lying farmland and a high unenclosed ridge. It has an 'upland farm' character feel to it. It lies on northwest-facing slopes between 190m and 200m. All the land has been enclosed, but fields at higher elevations are now breaking down. Three farms, Gurnos, Garn-wen and Tan-y-lan, lie within the area. The fields, though tending towards the irregular, have a definite northwest-southeast trend to their axes, perhaps indicating a single major episode of enclosure. Field boundaries exhibit a variety of types; dry-stone walls, earth banks and stony banks. The latter two are topped with hedges, which are in various stages of decay; at higher levels they have virtually gone, at lower levels they tend to be overgrown with distinctive hedgerow trees. Dry-stone walls are mostly derelict. Wire fences provide stock-proof barriers. Most land is improved pasture, but a medium-sized conifer plantation has been established over some former fields. Farmhouses are stone-built, probably 19th century, and have a substantial range of 19th century stone-built farm buildings associated with them, as well as very extensive modern agricultural buildings.'* (dyfedarchaeology.org.uk/HLC/HLCTowy/area/area226)
- 4.3.3 The HLCA of Trichrug (231) is described as *'lying across a southwest to northeast ridge. On the flanks of the ridge this area runs down to about 200m, the highest summit achieved is over 400m. The crest of the ridge rises from just over 200m in the southwest to the high point at the northeast end. The whole ridge has been enclosed by medium- and large-sized regular enclosures, but over much of the ridge crest, certainly at the highest point, these have broken down, but on the flanks they survive though in a much degraded form. Boundaries to the fields take a variety of forms, earth banks with hedges, stony banks sometimes with hedges, and dry-stone walls. On the ridge crest hedges are either gone or derelict, but elsewhere they are in better condition, but generally overgrown. Nearly all the dry-stone walls have collapsed. Wire fences provide stock-proof boundaries. At the highest point the ridge essentially consists of a small area of unenclosed moorland. Elsewhere rough pasture and improved grazing constitute the main land use, though several medium-sized conifer plantations are also present. The remains of numerous small quarries along the ridge comprise important landscape elements. Bronze Age burial mounds are also prominent features of the landscape. There is little present settlement in this character area. Recorded archaeology is rich and important, comprising a Neolithic or Bronze Age findspot, a group of Bronze Age round barrows and, on the edge of the area, a Bronze Age standing stone. There is also an Iron Age or Roman findspot, a possible Iron Age hillfort,*

Post-medieval quarries and unknown enclosures' (dyfedarchaeology.org.uk/HLC/Myddfai/area/area231).

- 4.3.4 The very northern peak of the proposed development is within the HLCA of Bethlehem which is described as *'a landscape of dispersed farms, small pasture fields and small woods. Boundaries to the fields consist almost entirely of earth banks topped with hedges, but a few stone-faced banks lie on higher ground. Hedges are generally in good condition and are well maintained; many have distinctive hedgerow trees. Land-use is predominantly improved pasture, with very little rough and rushy land. Deciduous woodland is mostly confined to the steep valley sides, where it provides a distinctive landscape component. Close to the Tywi valley the landscape has a parkland character; this is emphasised close to Crymlyn Manor by single trees and small clumps which indicate old park planting'* (dyfedarchaeology.org.uk/HLC/HLC Towy/area/area225).
- 4.3.5 The HLCA of Carn Goch (222) is described as *'a rounded bracken-covered hill on the south side of the Tywi valley. From the floor of the Nant Geidrych valley on the north at approximately 100m, craggy scree slopes rise to over 230m. Southern, western and northern flanks have less elevation, and are less precipitous and less craggy. Parts of the more gently-sloping northeastern slopes were formerly enclosed by earth banks and dry-stone walls, associated with the longhuts, but these have broken down. Recent land improvement has taken place in the area of old enclosures. The major defining historic landscape element of this character area are the remains of Carn Goch Iron Age fort and satellite fort. The remains are massive, and comprise rubble-built ramparts, several metres high and many hundreds of metres in length. The recorded archaeology is dominated by the Iron Age hillfort and its satellite fort represented by ramparts, ditches and hut platforms. Earlier occupation is suggested by Bronze Age finds, a round barrow and a possible burnt mound, as well as a possible Neolithic site. There are also early Post-medieval longhuts and field systems.'*
- 4.3.6 The proposed development area does not lie within any Conservation Areas (CAs) nor are there any Conservation Areas within 3km. The nearest Conservation Area is that of Llangadog, 3.5km to the north.
- 4.3.7 The site does not lie within any Registered Historic Parks & Gardens nor are there any within 3km.

4.4 Scheduled Monuments

- 4.4.1 Scheduled Monuments (SMs) are sites that are considered to be of national importance and have statutory protection under the Ancient Monuments and Archaeological Areas Act 1979. No SMs lie within the boundary of the proposed development. Three SMs lie within 1km of the proposal development and there are a further six within the 3km study area (Figure 4).

Table 2. Scheduled Monuments within 3km of the Proposed Development.

SM Number	Name	Period	Site Type	Distance (Min)
CM037	Garn Goch Camps	Prehistoric	Hillfort	118m
CM327	Trichrug round cairns	Prehistoric	Round cairn	352m
CM195	Llys-Brychan Roman Site	Roman	Villa	837m
CM385	Cwmdu Defended Enclosure	Prehistoric	Enclosure - Defensive	1.48km

CM010	Llwyn Du Camp	Prehistoric	Hillfort	1.6km
CM180	Standing Stone S of Llwyn-Du Farm	Prehistoric	Standing stone	2.12km
CM155	Bryngwyn Standing Stone	Prehistoric	Standing stone	2.84km
CM099	Castell Meurig	Medieval	Motte & Bailey	2.87km

- 4.4.2 The closest SM to the proposed development is Garn Goch Camps (CM037), which lies c. 120m to the north-west. The scheduled area includes two Iron Age hillforts on the summit of a low ridge. The larger, Y Gaer Fawr, is the largest of its type in south-west Wales. It encloses an area of 11ha within a stone-walled enclosure. It had two main entrances to the north-west and south-east, as well as eight narrow ‘postern’ gates. The smaller fort, Y Gaer Fach, is situated on a subsidiary summit to the east and is an oval enclosure of 1.5ha. There are also enclosures and roundhouses on the south-eastern slope of the ridge, suggesting the area has a very high archaeological potential for later prehistoric archaeology.
- 4.4.3 The Trichrug round cairns (CM327), lie c. 350m to the south-west of the proposed development, on the top of another long ridge. The SM consists of three circular burial cairns thought to be of Bronze Age date. The largest cairn is the north-eastern, measuring 18m in diameter and 2m high, the middle cairn is 12m in diameter and 0.3m high, and the south-western is 12m in diameter and 1m high. The cairns are important evidence of prehistoric funerary practices and are considered likely to retain intact burial deposits and associated ritual and environmental evidence.
- 4.4.4 Llys-Brychan Roman Site (CM424) is situated c. 840m to the north-east of the proposed development area. The site was excavated in 1961 and is thought to have been a rural villa built around a central courtyard. Occupation of the site was dated to between 200AD to the late 4th century on the basis of pottery and coins.
- 4.4.5 There are two further Iron Age defended enclosures to the north-west of the proposed development area. Cwmdu Defended Enclosure is c. 1.5km away and consists of an oval area defended on the west side by a bank, waterlogged ditch and counter-scarp bank and to the east by a stream. The site is unusual in being located in a wet pasture with partial waterlogging and therefore has potential to provide palaeoenvironmental and organic remains. Llwyn Du Camp (CM010) is 1.6km to the west of the proposed development area and has a more typical ridge-top setting. It is a 0.7ha sub-rectangular enclosure at the south-western end of the ridge, defended by the steep natural slopes to the north-east and south-west. It has a single bank and ditch to the north-east side and bivallate defences with an entrance to the south-west.
- 4.4.6 Waun Pwtlyn Long Barrow is situated on a low rise above the Afon Swadde, 1.5km to

the north-east of the development area. It is a long, trapezoidal mound of earth and stones, 30m long, 20m at its widest and 1.6m high. It is thought to be of Neolithic date and there is considered to be a strong probability that intact burial or ritual deposits as well as environmental and structural evidence may survive.

- 4.4.7 There are two possible Bronze Age standing stones within the 3km search area. The Standing Stone S of Llwyn-Du Farm (CM180) is c. 2.1km to the north-west of the development area. It is a 3.3m high standing stone located on a slope above the Tywi Valley. Bryngwyn Standing Stone (CM155) is c. 2.8km to the west of the proposed development area. It is 2.1m high, although it has been broken and repaired c. 0.5m above its base.
- 4.4.8 The only medieval SM within the 3km search area is Castell Meurig (CM099), which lies c. 2.9km to the north of the proposed development area. It is the remains of a Norman period motte and bailey castle situated on a natural mound in the Tywi valley. The motte is 15m in diameter and 10m high, encompassed by a 2m deep ditch. The sub-rectangular bailey lies to the south and is 170m long and 100m wide, surrounded by a single bank up to 2.3m high. The castle is recorded as having been destroyed in 1209.

4.5 Listed Buildings

- 4.5.1 No Listed Buildings (LBs) lie within the boundary of the proposed development site. Three LBs are located within 1km of the proposed development and a further nine lie within the 3km search area (Figure 4). All are Grade II listed.

Table 3. Listed Buildings within 3km of the Proposed Development.

LB Number	Name	Period	Site Type	Distance (Min)
21973	Outbuilding at Crug Glas	Post-medieval	Farm outbuilding	787m
21974	Granary at Crug Glas	Post-medieval	Farm outbuilding	800m
21972	Crug Glas	Post-medieval	Farmhouse	817m
21975	Pound near Rhud y Mon	Post-medieval	Animal pound	1.43km
21976	Penyrhiw	Post-medieval	Farmhouse	2.04km
87604	Pound near Three Horse Shoes	Post-medieval	Animal pound	2.05km
22000	Church of All Saints	Post-medieval	Church	2.18km
22001	Gwynfe Church Hall	Post-medieval	Church hall	2.21km
22002	Telephone Call-box	Modern	Telephone call-box	2.22km
21978	Pant Mawr with attached outbuilding and barn	Post-medieval	Farmhouse and barn	2.53km
21977	Capel Jerusalem and attached outbuildings	Post-medieval	Chapel	2.58km
21984	Brynmelyn and attached outbuildings	Post-medieval	Farmhouse and outbuilding range	2.6km

- 4.5.2 The three LBs that lie within 1km of the site are all part of Crug Glas farm, c. 800m to the west. Crug Glas farmhouse (LB21972) is a long, three-room plan 18th century

farmhouse. It is listed as a good example of vernacular architecture with surviving interior layout. The Granary (LB21974) is a small, 19th century farm outbuilding with a loft. The Outbuilding (LB21973) is a mid-19th century rubble stone building with L-shaped plan. It has a lofted cartshed to one range and a barn to the other. Both are listed for their group value with the farmhouse.

- 4.5.3 On the lower north-west facing slopes of Garn Goch Camps, c. 1.4km from the proposed development area, is LB21975, an animal pound. The 5.5m diameter circular enclosure has walls built from rubble stone and earth. On the north-east side is an entry with a stone slab lintel and which formerly had an iron gate. The pound is listed as a rare surviving example of such structures.
- 4.5.4 Penyrhiw farmhouse (LB21976) is c. 2km to the east of the proposed development area. It is a two-storey, three window range rubble stone building with an external bread oven. A beam over the main fireplace is dated 1725. It is listed as a rare example of an early 18th century farmhouse.
- 4.5.5 Another animal pound (LB87604) is located c. 2km to the north-east of the development area. It is associated with Three Horse Shoes public house and may have been used on a drovers' route between Pont-ar-llechau and Llanddeusant.
- 4.5.6 There is a cluster of three LBs in the village of Capel Gwynfe, c. 2.2km to the south-east of the proposed development area. The Church of All Saints (LB22000) is a late 19th century Anglican parish church of unusually ornate interior decoration. It replaced an early 19th century church (LB22001) in 1898-9. The earlier church, which was a single chamber rubble stone building with central porch, now functions as the church hall. A telephone call-box (LB22002) is listed for its group value with the church and hall. It is of the K6 design and has a George VI crown to the top panels, dating it to between 1936 and 1953.
- 4.5.7 Brynmelyn farmhouse and attached outbuildings (LB21984) is a late 18th or early 19th century traditional farmstead, c. 2.5km to the south-east of the development area. It consists of a long rubble stone range with farmhouse, barn, stable and cowhouse. Within 50m to the south-east of the farmhouse is Capel Jerusalem and attached outbuildings (LB21977). The chapel was built in 1827 on the site of an earlier chapel, probably dating to the 1740s. It is of rock-faced limestone and has six round arched openings to the front, with two long windows to the centre, a door each side, and two high outer gallery lights. It has a whitewashed outbuilding to either end.
- 4.5.8 The final LB in the 3km search area is Pant Mawr farmhouse with attached outbuilding and barn (LB21978), c. 2.6km to the east of the proposed development area. The farmhouse is thought to be early 19th century. It is a two-storey, three bay rubble stone house with a lower outbuilding attached to the left side, from which a barn projects at a right-angle.

4.6 Known Archaeological Remains and Historical Development

- 4.6.1 There are 180 sites listed in the regional Historic Environment Record (HER), the National Monuments Record (NMR) and by Cadw within 1km of the proposed development site (Figure 2). Ten of these are within the proposed development area.

- 4.6.2 A search of artefacts and coins recorded within the Portable Antiquities Scheme database (www.finds.org.uk) within the same search area produced no results.
- 4.6.3 The recorded heritage/archaeological sites are briefly described below, according to period, where they are incorporated into a summary of the historical development of the area:

Prehistoric: Palaeolithic (c.450,000 – 10,000 BC), Mesolithic (c.10,000 – 3800 BC), Neolithic (3800 BC – 2300 BC), Bronze Age (2300 BC – 700 BC) & Iron Age (700 BC – AD 43)

- 4.6.4 There is little evidence of earlier prehistoric activity in the region. The earliest evidence for human activity within the 1km search area is the findspot of a Palaeolithic flint hand axe, PRN913, c. 550m to the south-west of the proposed development area. A possible Neolithic chambered tomb (PRN34670) has been identified on a field edge c. 550m to the north of the proposed development, while the SM Waun Pwtlyn long barrow (see above) also demonstrates use of the area in the Neolithic.
- 4.6.5 The density of funerary monuments in higher areas suggests that the Tywi Valley was relatively densely settled in later prehistory. Fifteen Bronze Age Round Barrows are recorded within the 1km search area, including those along the Trichrug ridge and Garn Wern. The only settlement evidence recorded is an undated prehistoric enclosure field system (PRN51726), about which there is no additional information.
- 4.6.6 Iron Age activity in the area also appears to have been high. Within the 1km search area are the two hillforts on Garn Goch (CM037) and a possible defended enclosure (PRN3408), while other hillforts in the 3km search area have already been discussed above (Section 4.4).

Roman (AD 43 – c. AD 410)

- 4.6.7 There is significant Roman activity known within the wider landscape surrounding the site. A temporary marching camp is located to the east (CM174), which is believed to date to AD 74-77 and so was constructed during the campaigns of Governor Agricola. In 2003 two Roman forts were discovered within Dinefwr Park, to the south-west of the proposed development site. Excavation confirmed that the first fort was built in AD 70s during the conquest period, with a smaller fort replacing this in the AD 80s. The second fort was occupied for approximately 30 years before being abandoned (Hughes 2007).
- 4.6.8 Segments of a Roman road have been recorded to the north-west and west of the site, along the line of the modern A40. The road would have connected the forts at Dinefwr to those at Llandovery and Carmarthen (Guest 2022). A number of findspots from along the road, as well as to the south and south-west of the proposed development site suggest a number of Roman settlements existed within the wider landscape.
- 4.6.9 Within the 1km search area only two sites are listed, with one likely not of Roman date. The first site is Llys Brychan Roman villa (PRN4047; CM424), which is located 837m to the north-east of the proposed development site. The villa was first discovered at the beginning of the 19th century and was subsequently excavated, with

further excavations taking place in the early 1960s. A geophysical survey suggests that the building was a winged corridor villa with an associated external bathhouse. The finds assemblage suggested occupation between the mid-3rd and late 4th centuries.

- 4.6.10 The second site, Pant-meredith (PRN8923), is located 400m to the north of the site. Pant-meredith is a small square enclosure, that survives only as a crop mark, with no visible earthworks. The HER lists it as of possible Roman date, but it is thought more likely to be of medieval date.

Early Medieval (c. AD 410 – AD 1086) & Medieval (1086 – 1536)

- 4.6.11 There are no sites of Early Medieval date within the 1km search area. However, a small number of sites have been recorded within the wider landscape. These largely relate to churches and churchyards, such as St Teilo's Church in Llandeilo to the south-west. The HER does record a possible Early Medieval Chapel just beyond the north-eastern edge of the 1km search area, Cae Capel (PRN4051). The entry relates to a field name 'Cae Capple' as recorded in apportionment for the tithe map.
- 4.6.12 Settlement is recorded within the wider landscape during the medieval period, with Llandeilo becoming an important market centre. A total of 28 medieval sites are recorded within the 1km search area. All but three of these relate to a dispersed medieval settlement (PRN14200) along the north-western and northern edge of the proposed development site. The remains of the settlement includes evidence of six long huts and houses (PRNs 10200, 1199, 14202, 14203, 9870, 14205), a number of drystone walls and enclosures as well as a hollow way (PRN51728) and a bridge across a stream formed of two stone slabs (PRN97301).
- 4.6.13 Llys Brychan (PRN12070) is located just to the north of the proposed development. The site is recorded as a medieval Llys, although there is no documentary evidence to support this.

Post-Medieval (1536 – 1899) & Modern (1900 – present day)

- 4.6.14 Settlement within the landscape continued to expand throughout the post medieval period, with 141 sites recorded within the 1km search area.
- 4.6.15 The vast majority of these relate to domestic and agricultural buildings, most of which are shown on the historic map sheets and do not survive. These include Tay-y-lan farmstead (PRN116531) and associated buildings (PRNs 109902, 109903), as well as Celynog Uchaf cottage (PRN110597), which are located within the development area. Cwm-clyd cottage (PRN51438) is also recorded as being located within the development area, immediately south of Celynog Uchaf with the HER entry stating the cottage is shown located along a road depicted on the Tithe map. No such cottage or road are depicted on the mapping within this area of the site however, and so it is likely the cottage has been located incorrectly on the HER.
- 4.6.16 A large number of field boundaries are recorded within the HER data, both in the form of earthwork banks and drystone walls. These would have formed part of the field systems associated with the farmsteads. Most are concentrated to the north-west and

north of the proposed development site. An example of such a field system is Coedtalylan, on the northern edge of the development site. A field system is represented by a number of banks and walls (PRNs 118092 – 118115). The field system includes the remains of a sheepfold (PRN 118101) and a trackway (PRN118095).

- 4.6.17 To the north-west of the proposed development site a mill is recorded, which still stands (PRN4895). The mill is depicted on the tithe map and so dates to at least the mid-19th century. A sluice is also shown on the mapping (PRN127991), which would have helped control the flow of water to the mill wheel.
- 4.6.18 There are two modern sites recorded on the HER data, which are listed as an enclosure and a hollow (PRNs 51723, 51732), both of which are likely to be older and not modern in date.
- 4.6.19 The data lists a small council estate at Bethlehem at of post medieval date (PRN29609). However, as it was constructed in the 1950s it is of modern date.

5 Map Regression

5.1 Ordnance Survey Drawing: Llandovery, Thomas Budgens, 1811–1813.

- 5.1.1 The earliest mapping of the development area is the Ordnance Survey drawing of Llandovery, surveyed in 1811. The map does not provide much detail in terms of the layout of the local field systems, but it does show several farmsteads, including Gellinog (now Celynog Uchaf, PRN110597) and Carregcath (now Careg-y-gath, PRN105154), both within the proposed development area. Tan-y-lan Farm complex is named as Fraichlafelin (or Fraichtafelin) (PRNs 109902, 109903, and 116531).
- 5.1.2 The map depicts key landscape features in the area, including Garn Coch hillfort (CM037) with its ramparts, Taircraig Mountain (now Trichrug) to the south of the development area, the hilly area to the north-west of Carregcath, and the valley with stream (probably Ffrwd y felin) in between. The map shows little woodland in the area at this time, with only a small area shown on the hill to the south of Danygarn (now Tan-y-garn (PRNs109553 and 109555). Larger pockets of woodland are shown along the Afon Sawdde valley to the east and along the Afon Meilwch valley south-east of Taircraig Mountain.

5.2 Plan of the parish of Llangadock, Carmarthenshire, 1839

- 5.2.1 The Tithe map of the parish of Llangadock, Carmarthenshire, produced in 1839, indicates that the development covers a total of 69 fields (Figure 5). The apportionment details can be found Appendix III.
- 5.2.2 The layout of the proposed development area is fairly similar to that which is present currently with the most noticeable difference being the south-eastern extent of the area being formed larger, undivided fields compared to the current arrangement.
- 5.2.3 Tan-y-lan Farm complex is identified as Frachtenfelen and the Careg-y-gath farmstead at the northern end labelled as Carreggath. The buildings of Celynog Uchaf are shown but are not identified by name.

5.3 First Edition Ordnance Survey, Carmarthenshire, Sheets XXXIV (NE,NW,SE,SW) Published 1885-1887

- 5.3.1 The First Edition OS map provides greater detail and accuracy than the Tithe map but shows no significant changes. Tan-y-lan is now recorded by its current name as is Celynog Uchaf and Careg-y-gath. There are some minor alterations to the field boundaries with the fields immediately to the north of Tan-y-lan now merged into the current field 36 (Figure 6) as well as the fields now forming field 5 (see Figure 8 for current field numbers). By this date there has been a subdivision of the southernmost fields forming the current fields 14, 15 and 16.

5.4 Ordnance Survey, Carmarthenshire, Sheets XXXIV (NE,NW,SE,SW), Revised 1904/5, Published 1907

- 5.4.1 The only observable change within the vicinity of the proposed development area is an addition building added to the Tan-y-lan complex.

5.5 Ordnance Survey, Carmarthenshire, Sheets XXXIV (NE,NW,SE,SW), Revised 1948, Published 1953

- 5.5.1 There are no significant changes to the development area from the previous mapping.

5.6 Ordnance Survey SN62SE & SN72SW, Revised Pre-1930 to 1963, Published 1964, 1:10,560

- 5.6.1 There are no significant changes to the development area from the previous mapping.

6 Aerial Photographs and LiDAR

6.1 Aerial Photographs

- 6.1.1 Aerial photographs from 1945 to the present day have been examined. The full list of examined photographs is included in the bibliography.
- 6.1.2 The earliest available photograph was taken in 1945. The photograph was taken by the RAF and shows the fields of the development area and a large part of the surrounding landscape. The site is shown to consist of a number of small enclosed fields, with some small areas of mature woodland and scrub. There are no visible features in the fields.
- 6.1.3 Photographs from 1948, 1969 and 1970 show a similar picture. No change is evident until the photograph dating to 1974, which shows some minor alterations to the field system within the site, with two of the smaller fields to the north of Tan-y-lan farm having been merged to form current field 35. No further change is evident until 1985, with this photograph showing that two further field boundaries to the north of the farm had been removed, creating a large open field, which is current field 39.

6.2 LiDAR

- 6.2.1 LiDAR imagery is only available for a small section of the central area of the development site, at 1m DSM (Figure 7). The established woodland on the eastern

edge of the site is clear trees as are the current field boundaries.

- 6.2.2 The LiDAR data appears to show the remnants of ridge and furrow (TAN07) across fields 26, 24, 27, 28, 31, 32 and 33. The ridge and furrow would have formed part of a medieval open field system, which may have been associated with the dispersed settlement known to the north-west of the site. The field boundaries within this area of the site have been imposed across the remains of the ridge and furrow and so post-date the ploughing. The enclosed field system is of medieval date, suggesting the ridge and furrow is of earlier medieval date.
- 6.2.3 Holloway TAN02 is also clear on the LiDAR data, running south-west through the centre of the site from Celynog Uchaf.

7 Site Visit

- 7.1.1 A site visit was undertaken over two days on the 22nd and 23rd February 2023. Conditions on the 22nd were changeable, with squally showers interspersed with sun. Visibility was generally good but occasionally poor. Conditions on the 23rd were clear and sunny and visibility was good.
- 7.1.2 The proposed development area is currently Tan-y-lan sheep farm. It lies on the north-west facing slope of Banc Celynog, from the Ffwrdd y Felin stream valley bottom to the Banc Celynog ridge line, from c. 150m aOD to 360m aOD (Plates 1 and 2). A small portion of the northern part of the area lies on the south-west facing slope on the north side of the Ffwrdd y Felin valley. The development area is crossed by numerous small streams running roughly north-west to join the Ffwrdd y Felin. The largest of these, Nant Celynog, is located in the east of the area.
- 7.1.3 The site consists of 53 fields with some additional small areas (Figure 8). The farm is accessed from the north by a track that branches off from another track that provides access to both Tan-y-lan and Garn-wen farms from the un-named road to the north between Bethlehem and Rhyd-y-saint. The track is paved with concrete in a very poor state of repair. It is bounded by a bank and hedgerow apart from where it runs along the side of a stream (Plate 3).
- 7.1.4 The farm buildings include a cottage (PRN109902) and outbuilding range (PRN109903), both stone built and depicted on the Tithe map (Plates 4 and 5). There are also two barns of corrugated iron in poor condition to the north and south of the farmyard. Two large modern barns of aerated blocks and sheet metal are located to the south-east (Plate 6).
- 7.1.5 A short section of holloway (TAN01) runs from the farmyard to access the fields in the west of the farm (Plate 7). It has high banks topped with a hedgerow to either side. Part of the north-west side has some surviving stone wall (Plate 8). This route may have formerly connected with a track that runs north-east from the farmyard, although the section through the field nearest the farm does not survive.
- 7.1.6 Another holloway (TAN02) runs roughly north-east to south-west across the site to the south of TAN01. This route is depicted on the Tithe map and formed part of a circular route joining former farmsteads in the area, including Pen y Rhiw

(PRN110636), c. 600m to the east of the proposed development area, Celynog Fach (PRN110598), immediately outside the site boundary to the east, and Celynog Uchaf (PRN110597) within the development area, before turning north and joining the existing access track outside the development area to the west. The holloway runs along the hillslope and cuts into the slope on its southern side. It is bounded by low banks planted with occasional mature trees and also hedgerows along the north side to the west of the proposed development area (Plates 10, 11, 12 and 13).

- 7.1.7 The overgrown remains of Celynog Uchaf (PRN110597) lie in the corner of Field 24, on the west side of the Nant Celynog. The former cottage is in a ruined state with only very small sections of surviving lower wall visible under a rubble mound (Plate 14).
- 7.1.8 In the very north of the development area is an abandoned post medieval farmstead, Careg-y-Gath (PRN105154), represented by the collection of small enclosures of Field 49. The remains of at least three buildings can be seen, with standing walls surviving up to over 1m in height in places (Plates 15 and 16). A holloway (TAN03) ran south-west from the farmstead, presumably to provide access to fields to the south. It has banks of large rubble stone lined with mature trees (Plates 17 and 18). It runs down to cross the stream at the bottom of the valley by a ford (PRN127992), which is bounded on the south-east by a rubble stone curb (Plate 19).
- 7.1.9 The fields within the proposed development area can be roughly divided into three categories of field system. The majority are small, irregular pasture fields likely of medieval date (TAN04), located on the lower valley slopes around the farm, from Field 45 in the north to 12 in the south and 4 in the west to 22 in the east (Plates 20 and 21). Some of the irregular field boundaries are due to them following streams, while others may have prehistoric origins. The more sinuous curves are indicative of earlier medieval ploughing. The field boundaries in this area are mostly low earth banks with either laid hedgerows or lines of mature trees (Plates 22, 23 and 24). In some cases, mainly in the west of the area, streams have been utilised as field boundaries. They generally have trees growing along them and many have modern post and wire fences on one side (Plates 25 and 26).
- 7.1.10 A smaller number of fields in the south-east of the area were part of the upland common on Banc Celynog until they were enclosed in the 19th century (TAN05). These fields are larger, with straight although sometimes irregular field boundaries. These upland pasture fields have low scrub and along the top of the ridge there are craggy areas (Plates 27 to 30). The field boundaries are mostly low banks with modern post and wire fences and some rare surviving trees becoming more common farther downslope (Plates 31 and 32). In some cases, the post and wire fence has not been maintained, leaving only the low bank (Plate 33). The farm boundary to the south-east along Fields 15 and 17 is a drystone wall (Plates 34 and 35).
- 7.1.11 The final field group (TAN06) are those to the very north of the proposed development area, around the former Careg-y-Gath farmstead. These are very small, irregular pasture fields which could be of prehistoric origin. The field boundaries are banks constructed from large rubble stones with occasional mature trees along them (Plates 36 and 37).

- 7.1.12 There are ten assets recorded on the HER within the proposed development area, all of which were visited during the site visit. Five of them – Tan-y-lan cottage (PRN109902) and barn range (PRN109903), Celynog Uchaf (PRN110597), Careg-y-Gath (PRN105154), and ford (PRN127992) – have already been discussed. Another also relates to Tan-y-lan farmstead (PRN116531) and PRN40258 references the Garn-wen character area. The cottage recorded in Field 25 (PRN51438) does not appear on any historic mapping and seems to be a location error (see Section 4.6).
- 7.1.13 In the north of the area, PRN118115 is recorded as a possible boundary bank. It was observed during the site visit as a low earth and stone bank on the eastern boundary of Field 45 (Plate 38).
- 7.1.14 To the north of Field 48, PRN118109, Coedtalyan, is recorded as a small, terraced area, probably part of the Careg-y-Gath farmstead (PRN105154). This was identified on the site visit as a section of rubble stone overgrown by woodland (Plate 39). Two field boundaries, PRN118113 and 118099, were located to the eastern boundary of Careg-y-Gath. They were similar earth stone banks to PRN118115, although largely overgrown by woodland.
- 7.1.15 The LiDAR survey showed ridge and furrow in fields to the west of the area (TAN07), which likely also continued beyond this, but the LiDAR only covers a small portion of the proposed development area. No ridge and furrow was visible on the ground during the site visit. No additional new archaeological sites were identified.
- 7.1.16 The site visit also included visits to nearby designated assets to assess the potential impact of the proposed development on their setting. The closest to the proposed development area is Garn Goch Camps, CM037, which consists of two Iron Age defended enclosures, as well as various associated features. The larger of the two enclosures, known as Y Gaer Fawr, is closest to the site, while the smaller, Y Gaer Fach, is situated to the west of it. The monument forms part of two long distance walking routes, The Heart of Wales Line Trail and the Beacons Way, which follow the same route over the high points of the hilltop.
- 7.1.17 There are clear views of the entire development area from the eastern end of Y Gaer Fawr (Plate 40). The trails enter the scheduled area in the east from the main farm track and gradually rise up to the ramparts. From the lower parts of the scheduled area the northernmost part of the proposed development area is not visible. The trail crosses the monument to the north of the enclosed area, meaning that for much of the route the site is obscured or entirely blocked by undulations of the hilltop (Plate 41). However, from the southern rampart there continue to be views of a large part of the proposed development area all the way to the western side of the ramparts (Plate 42). Views of the development area from Y Gaer Fach are largely blocked by the larger hill of Y Gaer Fawr, although some upper parts of the southern development area are visible (Plate 43).
- 7.1.18 The three round cairns on Trichrug (CM327), lie to the south-west of the development area, on the same ridge as the highest part of the site. The topography of the development area means that only the southernmost fields are visible from the easternmost (Item A) of the cairns. There are no views from the other cairns (Items B

and C).

- 7.1.19 The three LBs of Crug Glas farmstead lie to the west of the development area and south of Garn Goch Camp. They have partial views of the upper parts of the proposed development area. No other LBs within the 3km search area have views of the proposed development due to local topography.
- 7.1.20 The development area lies adjacent to the Tywi Valley Registered Historic Landscape, which includes the valley bottom and lower slopes. There are clear views of the Registered Landscape from much of the development area, with the most extensive being from the high points at the south (Plate 45), reducing as the slope lowers to the north (Plate 46). There are no views from fields north of Field 43, which only has a small window to the north-east. From the valley itself visibility of the development area varies significantly depending on the topography and immediate buildings and vegetation. Even from the valley bottom there some places with clear views of much of the site (Plates 48 and 49).
- 7.1.21 The Black Mountain and Mynydd Myddfai Registered Historic Landscape lies to the east of the development area, on the opposite side of the Trichrug range. Only a tiny section of the development area on its south-eastern boundary on the ridge top is visible from the Registered Landscape (Plate 50).

8 Impact Assessment

8.1 Assessment of Heritage and Archaeological Potential and Importance

- 8.1.1 This report has established that the proposed development area consists of agricultural field systems probably established in the medieval period, with some potential for earlier prehistoric elements. It lies within close proximity to both Bronze Age and Iron Age Scheduled Monuments. However, the potential for the presence of unrecorded prehistoric archaeological remains is considered low due to the likelihood of medieval ploughing of the area, confirmed by evidence from partial LiDAR coverage.
- 8.1.2 The apparent longevity of the field systems also means that there is a low potential for unrecorded medieval or post-medieval archaeology.
- 8.1.3 The known assets within the development area relate to Tan-y-lan farm, including the farm buildings (PRNs 109902 and 109903) and field systems (TAN04 to TAN06), as well as other post-medieval farmsteads Careg-y-Gath (PRN105154) and Celynog Uchaf (PRN110597), which were abandoned in the 19th century. The value of these assets is considered **Low** as they are of local importance.

8.2 Previous Impacts

- 8.2.1 Previous impacts across the proposed development area are of great significance in determining the survival and importance of the known and potential heritage/archaeological resource.
- 8.2.2 The probability that the field systems within the proposed development area are of medieval origin, combined with the historic map and aerial photo evidence, demonstrates that the area has been subject to very little disturbance from the post-medieval period with the exception of the modern barns constructed at Tan-y-lan. The only potential disturbance to subsurface remains across the wider site area is medieval ploughing, which would have impacted any earlier medieval, Roman or prehistoric archaeology.

8.3 Potential Impacts of the Proposed Development

- 8.3.1 The development consists of a programme of woodland creation which would involve the planting of Sitka spruce, mixed broadleaves and Douglas fir in patches across the development area. The existing historic field boundaries, woodland, and structures would remain undisturbed. A strip along the south-east boundary of the site, along the Trichrug ridge, will be left unplanted, as will Field 41, which is currently boggy.
- 8.3.2 The planting activity has a potential to disturb existing features, particularly if heavy machinery is used. It will also cause subsurface damage across the existing fields. Once the woodland is established, tree root activity has the potential to cause further subsurface damage to any subsurface remains.

8.4 Historic Landscapes

- 8.4.1 No Registered Historic Landscapes will be directly affected by the development. Within the 3km search area there are two Registered Landscapes of Outstanding

Historical Interest. The Tywi Valley (HLW (D) 5) Landscape is to the north and west of the proposals and to the south and east is the Black Mountain and Mynydd Myddfai (HLW (D) 1) Landscape.

- 8.4.2 The proposed development sits within three HCLAs, Garn-Wen (226) and Bethlehem (225), which are part of the Tywi Valley Registered Landscape, and Trichrug (231), which is part of Black Mountain and Mynydd Myddfai.
- 8.4.3 Bethlehem HLCA is a large character area of dispersed farms, pasture fields and small wooded areas along the lower south-eastern slopes of the Tywi Valley. The addition of a very small area of woodland in a low-lying section of the HLCA, already surrounded by woodland, is considered to have a **Negligible** impact on the HLCA.
- 8.4.4 Garn-Wen HLCA is a narrow area on the lower slopes of the Trichrug ridge which is characterised as an area of enclosed irregular pasture fields associated with three farmsteads, thought to be of a single enclosure episode. Field boundaries are drystone wall, earth banks or stone banks. In the north-east of the area, adjacent to the proposed development area, is a modern conifer plantation, Coed Careg. The development area represents one of the three farms which make up this HLCA and covers approximately a quarter of the area. The development proposals will physically retain the existing field boundaries within the plantation. However, the change from small pasture fields to an area of woodland represents a **Moderate** impact on the character of the HLCA.
- 8.4.5 Trichrug HLCA lies over the Trichrug ridge and includes the upland fields of the farmsteads in Garn Wen HLCA as well as those on the south-east facing flanks. It is characterised as being an area of medium to large regular enclosures, many of which have degraded. It consists of rough pasture as well as several medium sized conifer plantations. The proposed development covers only a very small percentage of the whole HLCA, and the addition of another medium sized conifer plantation is considered to have a **Minor** impact on the area.
- 8.4.6 The position of the proposed development on the north-west facing slope of Trichrug means that much of the site overlooks the Tywi Valley Historic Landscape, with particularly long views to the north. To the west, the low hill of Garn Goch limits some views from the valley. The wide, flat valley of the Tywi allows long views across and within the Registered Landscape. The proposed development is relatively small scale, and in proportion and character with other conifer plantations scattered along the valley. When traveling through the valley, including by the main route of the A40, the development would not be notable. Therefore, despite the extensive views of the Registered Landscape from much of the proposed development area, the visual impact of the development on the setting of the Registered Landscape is considered **Minor**.
- 8.4.7 The Black Mountain and Mynydd Myddfai Registered Landscape lies to the south-east of the Trichrug range, and therefore only the south-eastern edge of the proposed development area that lies on the crest of the hill is visible from it. The development proposals leave this upland section of the area untouched, meaning there will be no visual impact to the Registered Landscape.

- 8.4.8 There are no Registered Parks and Gardens or Conservation Areas within a 3km search area.

8.5 Scheduled Monuments

- 8.5.1 No Scheduled Monuments will be directly affected by any development. Three SMs lie within 1km of the proposal development and there are a further six within the 3km study area. Only two Scheduled Monuments will be indirectly impacted by any development.
- 8.5.2 The closest Scheduled Monument to the proposed development is Garn Goch Camps (CM037). The site visit established that there would be clear views of almost all the development from the eastern areas of the Scheduled Monument, views of the central and southern area from the south side of the monument, and occasional partial views from the west and north. However, the setting of the monument includes extensive views in all directions, part of what would have made the hill an attractive location for Iron Age communities. The views to the south-east are less long range due to the Trichrug hill range, but those to the south-west, north-west and north-east extend along and across the Tywi Valley. The scale of the impact should take into consideration the size of the development in comparison to the totality of views surrounding the Scheduled Monument.
- 8.5.3 The proximity of the proposed development does mean that the visual impact is particularly pronounced. The development would represent a change in character of the area from the existing pasture fields to forest. However, similar small to medium sized forestry areas are already present in the surrounding landscape and form a part of the monument's setting, including Coed Careg, which borders the development area to the north-east, Pen-Arthur Plantation to the east and Carreglwyd to the south-west. A panoramic photo taken from the eastern end of Y Garn Fawr (Plate 51) provides a wider appreciation of the setting to the north and east, including the various forest areas. The development would not significantly affect the appreciation of the Iron Age defended enclosures or the understanding of their setting. It is considered that the proposed development would result in a **Minor** impact of the setting of Garn Goch Camps.
- 8.5.4 Trichrug round cairns (CM327) are located on the crest of Trichrug ridge to the south-west of the proposed development area. The cairn's location slightly to the north of the ridge crest means that wide views are available from it across the Tywi valley, which was likely a key reason for its construction in this location (Plate 52). It is this broad view which provides the context and understanding of the setting for the monument. The closest of the cairns to the site is Item A, which is also the largest and best preserved of the three. From Item A, only a section of the south-east of the development area can be seen on the ridge, while to the north the site area falls away. Most of the visible area will be left unplanted, therefore there will be visual impact on the monument. It is considered that the proposed development would have a **Negligible** impact on CM327.

8.6 Listed Buildings

- 8.6.1 No Listed Buildings will be directly affected by the proposed development. Three LBs are located within 1km of the proposed development and a further nine lie within the 3km search area. Only the three closest Listed Buildings, all part of Crug Glas farmstead (LBs 21972, 21973 and 21974) would be visually impacted by the development proposal. There would be partial views of central and upper areas of the proposed development. It is considered that these impacts would be **Negligible**.

8.7 Non-Designated Assets

- 8.7.1 There are ten non-designated assets previously known within the proposed development site, although as discussed above one of these (PRN51438) has been erroneously located and is in fact not within the development area. A further site listed on the HER relates to the HLCA of Garn-Wen (226) (PRN40258).
- 8.7.2 The eight non-designated assets within the site boundary are the three buildings of Tan-y-lan farmstead (PRNs 109902, 109903, 116531), Celynog Uchaf cottage (PRN110597), boundary bank (PRN118115) and Tan-y-lan ford (PRN127992). The final asset is Coedtalyan, a small, terraced area (PRN118109), which was probably part of the Careg-y-Gath farmstead (PRN105154).
- 8.7.3 The site visit has shown that Celynog Uchaf cottage (PRN110597), boundary bank (PRN118115), field boundaries (PRNs 118113 and 118099), Coedtalyan (PRN118109), and Careg-y-Gath farmstead (PRN105154) were in a ruinous state and were all overgrown by existing woodland. Tan-y-lan ford (PRN127992) was also shown to be located within an area of existing woodland. As such the proposed development would likely have a **Negligible** impact on these assets.
- 8.7.4 The buildings associated with Tan-y-lan farm itself (PRNs 109902, 109903, 116531) are still extant and within use as part of the modern farm. The proposed development plan would leave these buildings standing, with no planting planned for this part of the site. As such the plantation will not have a direct impact on the buildings at present and so will likely have a **Negligible** impact on these assets. However, lack of continued maintenance of the structures will result in a gradual decline in their condition over time.
- 8.7.5 An additional seven archaeological assets were identified during the course of this desk-based assessment, six during the site visit and the seventh through analysis of the LiDAR data. These are holloways (TAN01, 02 and 03), field systems (TAN04, 05 and 06) and ridge and furrow (TAN07) (see Appendix II).
- 8.7.6 The three holloways and the field systems identified within the proposed development site form part of the agricultural landscape linked to Tan-y-lan farmstead and Celynog Uchaf cottage. None of these assets are in their original state, all having decayed. The holloways are no longer used and as such are overgrown with their banks topped by trees. The field banks are in various states of repair, with those closest to Tan-y-lan farm buildings being largely well maintained, with the hedges and mature trees growing along the tops of the banks. These assets are to be retained, with no planting along the holloways or across the field banks. As such the proposed

development will likely have a **Negligible** impact on these assets.

- 8.7.7 The LiDAR data shows possible ridge and furrow in a number of fields within the central area of site, which are likely of earlier medieval date (TAN07). It is considered that the development will have a potential **Moderate** impact on the ridge and furrow. If these are indeed ridge and furrow then any sub-surface remains within most of the site would likely have been disturbed. There is potential for any sub-surface activity associated with the development, such as excavation as part of planting and the subsequent growth of the roots, to impact buried remains. Due to the presence of the ridge and furrow however, it is considered that the development would have a potential **Minor** impact on any sub-surface remains within this part of the site.

9 Conclusions

9.1 Impacts on Designated Assets

- 9.1.1 The proposed development sits within three HCLAs, Garn-Wen (226) and Bethlehem (225), which are part of the Tywi Valley Registered Landscape, and Trichrug (231), which is part of Black Mountain and Mynydd Myddfai. The proposed impact on HCLA 225 is considered to be **Negligible**. The proposed impact on HCLA 226 is considered to be **Moderate**. The proposed impact on HCLA 231 is considered to be **Minor**. The visual impact of the development on the setting of the Tywi Valley Registered Landscape is considered **Minor**. There will be no visual impact to the Black Mountain and Mynydd Myddfai Registered Landscape.
- 9.1.2 Three Scheduled Monuments lie within 1km of the proposal development and there are a further six within the 3km study area. Two Scheduled Monuments will be indirectly impacted by any development these are Garn Goch Camps (CM037) and Trichrug round cairns (CM327). the various forest areas. It is considered that the proposed development would result in a **Minor** impact of the setting of Garn Goch Camps and a **Negligible** impact on CM327.
- 9.1.3 Three LBs are located within 1km of the proposed development and a further nine lie within the 3km search area. Only the three closest Listed Buildings, all part of Crug Glas farmstead (LBs 21972, 21973 and 21974) would be visually impacted by the development proposals. It is considered that these impacts would be **Negligible**.

9.2 Impacts on Non-Designated Assets

- 9.2.1 Of the ten previously identified assets and seven newly identified assets within the bounds of the proposed development, one includes the HLCA 226 discussed above and another PRN51438 has been erroneously located. The remaining eight fall within areas of existing woodland and buildings or existing field boundaries. Therefore there will be **Negligible** short term impact on these assets although there is the potential for these to suffer deterioration over time due to the impact of roots.
- 9.2.2 Of the seven newly identified sites, the holloways (TAN01-03) again fall within areas not subject to proposed planting so will be have a **Negligible** impact by the proposals. The field systems (TAN04-06) would also remain intact but could also potentially be

impacted in the longer term by root damage. It is considered that the development will have a potential **Moderate** impact on the ridge and furrow (TAN07), however, it is considered that the development would have a potential **Minor** impact on any sub-surface remains within this part of the site.

10 Mitigation

- 10.1.1 The existing field systems, boundary banks, hedgerows and holloways are as depicted on the tithe map and are likely to have been established in the medieval period, although the irregular nature of some of the boundaries may suggest prehistoric origins. The design of the proposals respects the existing boundaries. However, there is the potential for minor isolated impacts during the planting should the existing field entrances need widening for machinery or for other requirements. To mitigate the impact of these possible impacts, an archaeological watching brief should be carried out on any potential intrusive works that are required across the existing boundaries.

HISTORIC ENVIRONMENT FEATURES

Search criteria:

{1.8km radius from NGR provided}

A search of the regional Historic Environment Record (HER) held by the Dyfed Archaeological Trust has identified the following historic environment features. These are listed and described below. Each feature is allocated a Primary Reference Number (PRN) that should be quoted in any correspondence. Where the identification of a site is not certain then all possible interpretations are given in the type field e.g.'enclosure, henge'. Possible date ranges are also shown in this way in the period field. If a field contains no information then it is either not recorded, not known or not applicable for that site.

Please contact the HER if you have any further questions regarding this information, if you would like any of the sources followed up or if you have information that could improve these records in any way.

Source prefixes:

Ph = Published, historic (pre-1900)

Mh = Unpublished, historic

Pm/Mm = Published/Unpublished modern (post-1899)

Desc Text = Descriptive text.

GP/AP = Ground photograph/Aerial photograph.

All other source types should be self-explanatory; please contact the HER if you require assistance with them.

SUMMARY

This is the larger of two hillforts situated on Carn Goch known as "Y Gaer Fawr" that encloses an area of about 12 ha. It occupies the summit of a sandstone ridge at 220m above sea level with ground falling away steeply on all sides. A slight gap divides this upper, larger hillfort from the lower enclosure "Y Gaer Fach" (PRN 893) that sits on a knoll to the west. Both hillforts appear to be of similar construction and are therefore probably of the same date. Y Gaer Fawr is a long oval in shape running sothwest-northeast. It is surrounded by a single massive dry stonewall now collapsed, and has an outer wall on the northwest side. Hogg (1974) has identified three phases of fortification: 1 - A slight, possibly revetted, bank of earth containing much rubble, still traceable at the north-east and along the south-east side, but destroyed or concealed elsewhere. This would have enclosed about 12 ha. 2- A massive stone wall around the whole circuit except at the west end of the south-east side, where owing to the presence of cliffs the earlier wall seems to have been considered adequate. The area enclosed was a little smaller, about 11.2 ha. 3 - A further stone wall, rather less massive, apparently intended to form an annexe enclosing a broad shelf on the north side of the hill, but never finished. This would have added a further 4 ha to the enclosed area. At least eight gateways have been identified. The main entrance is on the northeast end with a double portal and there is a single broad gateway on the southwest side. There are six "posterns"; four on the northwest side and two on the southwest. Within the hillfort there are a number of structures. The summit cairn measures 55m x 20m x 3m high, which, like the rampart, is dry stone. Two roughly rectangular structures stand at the centre of the hillfort. The larger measures 25m x 9m, the other measures 14m x 8m, and these may represent a medieval house and fold. An almost circular levelled platform, the possible remains of a round house, 14m in diameter,

is located about 25m south of the medieval house. The rampart varies in size from its most massive west side where it is c.6.5m high, down to c.1.5m high on other sides. Apart from the dry stone ramparts and cairn that have no vegetation cover, the interior of the fort is covered with grass and/or bracken. F Murphy 27 February 2008 - compiled from several sources

DESCRIPTION

Iron Age hillfort, the larger of two hillforts situated on Garn Goch. (PP 2004)

SUMMARY

The smaller of the two hillforts situated on Carn Goch, known as "Y Gaer Fach". It is situated on a small knoll at 210m above sea level, and is separated from the larger hillfort (PRN 887) by a small gap. It is sub-circular in shape, and defended by a single stone wall, apart from on the west side where the rampart overlaps and runs parallel producing a narrow corridor. The RCAHM (1917) consider this to be an entrance, whereas Hogg (1974) contends it is part of an unfinished second phase of construction. There is an entrance on the east that consists of two out-turned ramparts forming a narrow

passageway running down the hill for approximately 60m towards the adjacent hillfort. The RCAHM (1917) identified traces of a hut circle within the fort, but subsequent visits by the Ordnance Survey and Cadw have not identified any internal features. The whole site is very rocky, and overgrown with bracken. F Murphy 27 February 2008 - compiled from several sources

DESCRIPTION

An Iron Age hillfort defended by a single stone wall with an entrance in the western side and one in the eastern side. there are tarces of hut circles within the hillfort. (PP 2004)

SUMMARY

The remains of a probable ring cairn rather than round barrow, located to the SE of Carn Goch which itself makes use of a natural ridge. The cairn is located on a gently sloping hillside, which runs off to the S and consists of a ring of stones forming a bank. which varies in width from 1.7-2m wide. The monument has clearly been disturbed, with some stones removed from the S sector and piled up instead on its SE edge. It is possible that it has been re-used in the past as a sheep-pen. The monument was described by the RCAHM in 1917 as 'a cairn about 30ft in diameter, which has been opened down to ground level revealing a small cist or excavation in the soil, containing black earth and traces of cremation'. No sign of a cist is visible today. The monument gives the appearance of a substantial ring cairn as opposed to a robbed round barrow: its centre is free of stone and may always have been so. The site is not intervisible with long cairn 879, which lies c.400m away within the ramparts of Cam Goch, but is actually clearly intervisible with the Trichrug cairns (900-902) c. 1.5km away to the S, with cairn 900 especially prominent. SUMMARY

Round cairn on farmed land. On western flank of the same named hill, facing Carn Goch hillfort and not visible from the modern approach road in the SE. A field wall runs partially through the large conical mound, which looks undisturbed. However, in 1935 it was reported as partially destroyed and in 1913 it was apparently 3m high and 26m in diameter.

DESCRIPTION

A substantial cairn visible from long cairn 879 and ring cairn 895 located at Carn Goch 1.5km away to the NNW. Part of the cairn has been robbed of its stone, presumably to reconstruct the boundary walls, which appear to have been recently restored. The cairn has been partially cut by the boundary wall and the part of the monument on the SE side of the wall has all but been totally robbed of its stone. This is one of three cairns located on top of a prominent local high point, and is the best preserved of the three. The cairns lie at the junction of a series of fields at 415m above OD, with extensive views all around the landscape. The cairn stands c.2m in height and there is a small central depression in the top of the monument, 2.8m in diameter. The cairn is intervisible with a number of other monuments further afield, including the Tair Carn Uchaf and Isaf group of cairns, plus Carn Pen-y-Clogau also located on the same Black Mountain range. SUMMARY

Noted by the OS as having been 'removed to form a fence' indeed this barrow has been severely robbed of its stone, but there are still traces of this monument visible as a ground swelling on the SE side of the boundary wall within few metres of neighbouring cairns 900 and 902. The mound, which forms a roughly linear arrangement with the other two cairns, lies at the middle of the group and has also been cut by the boundary wall. Loose stones were visible on the surface of the mound, with the rest turf-consolidated. The cairn measured roughly 12m in diameter and is located on the opposite side of the boundary wall from cairn 900. N Cook PFRS 2003

DESCRIPTION

Round Cairn, no longer visible, originally situated c. 80m NE of SN 69952300, still on farmed land.

SUMMARY

CARN TRICHRUG III Round Cairn, no longer visible, however an aerial shows trace of a small mound (in 1948) c. 160m NE of SN 69952300. Trichog is an elongated hill protruding noticeably from the landscape. Three cairns were situated on its western flank, facing Carn Goch Hillfort, of which only one (SN 6995 2300) is left. This is farmed land and a field wall passing the site close by, probably explains the disappearance of this cairn.

DESCRIPTION

One of three cairns at Trichrug, although this site and neighbouring cairn 901 were recorded by the OS as having been 'removed to form a fence'. However, clear traces of this cairn are visible on the hilltop, and although it has been severely robbed, part of the mound remains extant in the landscape. A trig point is mounted on the part

of the cairn that lies on the S side of the boundary wall which effectively cut the monument in two, and there are lots of loose stones visible through the grass cover around the base of the trig point. The portion of the turf-consolidated monument on the N side of the boundary is more clearly defined as a definite circular feature with a pronounced rise with the dry-stone wall running directly over the top of it. All three cairns in this group have been robbed of their stone to form the boundaries, but this site is less mutilated than 901 although not as well preserved as 900. The monument measures roughly 12m in diameter, and appears to stand to a maximum height of 1m, although this is accentuated by its location on the rise of the hill. N Cook PFRS 2003

CM-195 EVIDENCE Building

SUMMARY

The site of a Roman Villa, first reported by Fenton in c1800. Appears to have been excavated in the mid 19th century, and again in 1961-2. Excavations revealed masonry walls, wall plaster, hypocaust tiles, roof tiles, pottery and coins suggesting a villa of considerable size, built around a courtyard, with an associated bathhouse. Possibly occupied from c200AD to the late 4th century AD. (PP 2004)

DESCRIPTION

In 1961 The site was re-discovered prior to the erection of a silo., these operations having destroyed everything except the lowest courses and the floors of the area excavated, but walls standing to a height of about 3ft were visible in the area untouched. The foundations exposed formed 2 rooms (possibly 3) part of a NE-SW range, the walls of dressed stone banded with lime mortar and the floors of opus signinum. On one floor were two pillars of soft red tiles - likely to be supports for a raised floor. A room of later date abutted on the south side, possibly indicating that the buildings had surrounded a courtyard. Finds included hypocaust tiles, painted wall paster, roofing slates and two fragments of mortarium. The 1962 excavations showed that the east range extended northwards beyond the heated suite found in 1961, and then turned west, giving two sides at least of a courtyard structure. In 1968 the Ordnance Survey recorded the site of the villa at SN70492546, where, although there was no trace of the villa, an area of disturbed ground clearly marked the excavation.

SUMMARY

Site of a chapel recorded on the 1839 tithe map. In 1917 foundations of a building within an enclosure were noted. There is now (2018) no surface evidence for a chapel.

DESCRIPTION

Possible early medieval origins. A field, named 'Cae Capple' (ie. 'Cae Capel' or chapel field) on the Llangadog parish tithe map of 1839 was apparently known locally as 'Mynwent y Capel' or 'chapel cemetery'. The site was visited in September 2003 when no physical features at all were observed, and no aerial photographs were available for this site, but in 1917 the RCAHM described the field as featuring 'in the western corner... low grass-grown foundations of walls which average about a foot in height, and enclose a space 130 feet by 100 feet... Two oak trees of considerable age grow within the enclosure.' An early medieval origin for the site may be suggested by the fact that it lies 400m ESE of the probable Roman Villa at Llys Brychan (PRN 4047), which may have been re-used as the site of a medieval llys (PRN 12070). NDL 2003

SUMMARY

A stone hammer recovered from a field called Cae Jenkin in the Llangadog area. In 1909 it was in the ownership of Dr Meuric Lloyd JP at Delfryn, along with another axe from the area (PRN 4050). Both axes appear to be lost. NAP 2004.

SUMMARY

Possible funerary monument. RPS 10.2001

DESCRIPTION

Somewhat southeast of Llys-Brychan, where, outside the hedge line of the little wood + in the side grass of the open roadway, were found two square yards of rough broken stones. Some 35 years ago Vice-president Alan Stepney-Gulston removed these stones to a depth of three or four ft + found an upright rock or stone close to the edge line of the roadway. On clearing away the accumulated soil was found a second stone lying outwards but within a foot of the other, into which were fixed some rusty chain bits for fastening a wooden door. He entered "this cave like structure" under the road, over which when driving vehicles easily prove to the ear the existence of the great hollow. TCASFC

SUMMARY

Previously recorded by DAT as an unusual arrangement of stones. This corner has clearly been used in the past as a sumping area for stones disturbed by ploughing. However, there are a number of large edge set slabs of stone, which form a rectangular feature c 2.5m x 5m in size. Some 10m to the west, more edge set slabs run at right angles to this rectangular feature and may be part of a larger structure. It may indeed be a ruined Neolithic burial chamber or Cromlech. However, the degree of interference of the area over a long period of time makes it difficult to interpret the site from surface evidence. No trace of a cromlech or any other prehistoric feature in the area indicated by the NGR when visited in Jan 2002 as part of the PFRS Project. Rock outcrops naturally in this whole area and there are numerous edge set stones, which are in fact natural geological formations. The only feature in the area are stone boundary walls and possible animal pens/rectangular structures. The area is wooded and has streams running through it. Lots of 'natural' formations of the outcropping rock do look similar to other genuine cists, (like those at Morfa Bychan) but here the features are

natural rather than cultural. N Cook PFRS 2003

DESCRIPTION

An unusual arrangement of stones in the corner of the field known on the 1881 Direlton estate map as Cil y Ganfa. This corner has clearly been used in the past as a dumping area for stones disturbed by ploughing. However, there are a number of large edge set slabs of stone which form a rectangular feature c2.5m x 5m in size (although this is probably not the whole of the feature, which has been disturbed by both stone removal and dumping). Some 10m to the west, more edge set slabs run at right angles to this rectangular feature and may be part of a larger structure. It may indeed be a ruined neolithic burial chamber or Cromlech. However, the degree of interference of the area over a very long period makes it difficult to interpret the site from surface evidence. P. Sambrook, 1997.

SUMMARY

Historic Background A small area southeast of the Tywi dominated by Carn Goch, a craggy hill on which lie the substantial remains of Carmarthenshire's largest Iron Age hillfort. At 15 ha, and associated with a satellite fort, Carn Goch fort may have approached oppidum status and have been the centre of a large territory taking in most of the area south of the Tywi. There is evidence for earlier occupation of the site, possibly into the Neolithic, and the significance of the site may have persisted after its abandonment under Roman rule - the most plausible villa site in southwest Wales, Llys Brychan (Jarrett 1962), lies only 1.6 km to the northeast (Area 225). During the historic period the area lay within Cwmwd Perfedd, specifically Maenor Vabon, of Cantref Bychan, which was, with the

exception of Iscennen, invaded by the Anglo-Normans advancing from the east under Richard Fitz Pons who established a caput at Llandovery in 1110-16 (Rees n.d.). It was acquired soon after by the Clifford lords of Brecon as the Lordship of Llandovery. However, there were many episodes of Welsh rule and the area retained native tenorial customs until the end of the Medieval period when it was incorporated into modern Carmarthenshire. There is currently no evidence for the continued occupation of the hillfort(s) and the area appears to have been open common land during the Medieval period and into the Post-Medieval period; however it contains the remains of longhuts and associated enclosures, which are characteristic of early Post-Medieval settlement in upland southwest Wales (Sambrook and Ramsey 199). Such settlement may represent squatting, however, and there appears to have been little subsequent settlement; apart from some 18th- and early 19th-century encroachments along the northern fringe, the area is still largely unenclosed, as it is on historic maps. Description and essential historic landscape components Carn Goch is a rounded bracken-covered hill on the south side of the Tywi valley. From the floor of the Nant Geidrych valley on the north at approximately 100 m, craggy scree slopes rise to over 230m. Southern, western and northern flanks have less elevation, and are less precipitous and less craggy. Parts of the more gently-sloping northeastern slopes were formerly enclosed by earth banks and dry-stone walls, associated with the longhuts, but these have broken down. Recent land improvement has taken place in the area of old enclosures. The major defining historic landscape element of this character area are the remains of Carn Goch Iron Age fort and satellite fort. The remains are massive, and comprise rubble-built ramparts, several metres high and many hundreds of metres in length. The recorded archaeology is dominated by the Iron Age hillfort and its satellite fort represented by ramparts, ditches and hut platforms. Earlier occupation is suggested by Bronze Age finds, a round barrow and a possible burnt mound, as well as a possible Neolithic site. There are also early Post-Medieval longhuts and field systems. Most of these sites are scheduled. There are no standing buildings. Carn Goch character area is very distinctive and stands in sharp contrast with the surrounding enclosed farmland. K. Murphy & N. Ludlow

SUMMARY

Historic Background A very large character area on the southeast side of the Tywi valley between Llandeilo and Llangadog, including part of the lower Sawdde valley. During the historic period the area lay within Cwmwd Perfedd of Cantref Bychan, which was invaded by the Anglo-Normans advancing from the east under Richard Fitz Pons who established a caput at Llandovery in 1110-16 (Rees n.d.). It was acquired soon after by the Clifford lords of Brecon as the Lordship of Llandovery. However, there were many episodes of Welsh rule and the area retained native tenurial customs until the end of the Medieval period when it was incorporated into modern Carmarthenshire. The eastern section of this character area formed part of the patria of Llangadog which was acquired by the Bishops of St Davids by the late 13th-century (Rees 1932). The area may have been a focus for human settlement with status and/or ritual associations from an early date. A Neolithic chambered tomb and a Bronze Age standing stone lie centrally within the area. The large Iron Age hillfort of Carn Goch, Area 222, intrudes into, and dominates Area 225, and was probably the centre of a large territory taking in most of the area south of the Tywi. There is evidence for early occupation of this site, possibly into the Neolithic, and the significance it gave to the area may have persisted after its abandonment under Roman rule - the most plausible villa site in southwest Wales, Llys Brychan, lies within Area 225 only 1.6km to the northeast of the fort (Jarrett 1962). Its name suggests that Llys Brychan was (re)occupied during the Medieval period as an administrative centre or llys, with connections - putative or otherwise - with Brychan, a dominant figure in early Medieval tradition. It is still the site of a dwelling. By the post-Conquest period, however, the majority of this area west of the Sawdde was administered within Cwmwd Perfedd as Maenor Vabon, from a centre, Llys Hendy, now represented by the Post-Medieval house at Manoravon/Crymlyn Manor (Rees 1932) recorded since the 18th century (Jones 1987, 130). The continuing status of this area is demonstrated by the perceived importance of the neighbouring Llangadog (Area 206) during the Medieval period, with a chapel-of-ease to Llangadog parish at Capel Tydist, the site of a house since at least the early 19th-century (Jones 1987, 21), and a further possible chapel site. Gentry houses are numerous within the area, and many of them were acquired by the Dynevor estate including Mandinam, established by the 17th century and said to have been

the residence of Jeremy Taylor following his chaplainship to the Earl of Carbery at Golden Grove (Jones 1987, 7), and Tygwyn which was the residence of the Vaughans of Derwydd in c.1650 with a demesne which comprised 214 acres in 1879 (Jones 1987, 190). Llwynymendy has origins within the 17th century at the latest (Jones 1987, 121) as do Pentre Parr and Beili-Dyffryn (Jones 1987, 7, 153), which later became part of the Dirleton estate. Nevertheless the present pattern of enclosures, which was in place by the early 19th-century (Llandeilo Fawr and Llangadog tithe maps), may have been established by the Medieval period - they are very irregular with many stands of ancient deciduous woodland. The steep-sided valley of the Afon Sawdde is a natural line of communication and the A4069 was a major Post-Medieval droving route, turnpiked from 1779 (Lewis 1971, 43). Typical 19th century rural development is exemplified by Bethlehem which is a nucleation around Bethlehem chapel on the present Llandeilo-Llangadog road - also a turnpike - and shown as a cluster of cottages in 1839, to which a post office and school were added later in the 19th century (Sambrook and Page 1995, 40). A 20th century housing estate has been added but overall there has been little recent development. Description and essential historic landscape components Bethlehem is a very large character area. It runs along the south side of the Tywi valley from just southeast of Llandeilo upstream past Llangadog and across the Sawdde valley. It rises in a series of low, rounded hills from 30 m on the Tywi floodplain to over 130 m on the southeastern flanks of the area. Dissecting the landscape are numerous small, steep-sided valleys. Essentially this is a landscape of dispersed farms, small pasture fields and small woods. Boundaries to the fields consist almost entirely of earth banks topped with hedges, but a few stone-faced banks lie on higher ground. Hedges are generally in good condition and are well maintained; many have distinctive hedgerow trees. Land-use is predominantly improved pasture, with very little rough and rushy land. Deciduous woodland is mostly confined to the steep valley sides, where it provides a distinctive landscape component. Close to the Tywi valley the landscape has a parkland character; this is emphasised close to Crymlyn Manor by single trees and small clumps which indicate old park planting. There are numerous small, and one medium-sized conifer plantations in the area, mostly on higher ground. There are no nucleated settlements, the loose cluster of houses, a school and post office at Bethlehem is the only aggregate settlement of note. Dispersed farms and other houses dominate the settlement pattern. Most buildings are of 19th- and 20th-century date and stone built. There is a range of farmhouse types, but the majority are two-storeys and three-bays and in the vernacular tradition or more polite 'Georgian' style of the early- to mid-19th century. Larger dwellings are present, and smaller houses

and cottages. The range of old, stone-built, 19th century farm buildings also reflects prevailing social and economic class; most are substantial ranges, often semi-formally arranged around a yard, though single ranges of smaller buildings are present on the smaller farms. Nearly all farms have modern agricultural buildings. Superimposed onto the old-established pattern of dispersed farms is a scattering of a small number of later 19th- 20th-century dwellings, in a variety of styles and materials. Recorded archaeology is rich and diverse, comprising one definite and one possible Neolithic chambered tomb/Bronze Age long barrow, a Bronze Age standing stone and a possible round barrow. Also there is a further Iron Age hillfort on the western slope of Carn Goch (Area 222), and another hillfort to the west. Llys Brychan was excavated in 1961 when it was concluded to be a probable Roman villa site (Jarrett 1961). From the Medieval period are a chapel site and possible chapel site, while from the early Post-Medieval period are possible pillow-mounds, a well and a rubbing stone, in addition to enclosures of unknown date. There are many distinctive buildings, and high-quality farmhouses. Mandinam house is Grade II listed and mainly from the 18th- and 19th-century, with double-saddle roofs. The contemporary houses at Tygwyn, Llwynymendy, Pentre Parr with its lodge and park, and Beili-Dyffryn are unlisted. The present farmstead at Llyshendy was built for the Dynevor estate (Judith Alfrey, pers. comm.). The chapel, school and post office at Bethlehem should be noted, in addition to mills, cottages and dwellings, bridges and a smithy site. To the north this character area is well defined by the flood plain of the Tywi valley and by Felindre character area. Where this area borders higher ground boundary definition is also good - to the south against Carn Goch, Garn-wen and others, but elsewhere there is a zone of change rather than a hard-edged border. SUMMARY

Historic Background A small character area on the southeast side of the Tywi Valley between Llandeilo and Llangadog, dominated by the large Iron Age hillfort of Carn Goch (Area 222) which rises just beyond the northern edge of Area 226 and was probably the centre of a large territory taking in most of the area south of the Tywi. During the historic period the area lay within Cwmwd Perfedd - specifically Maenor Vabon - of Cantref Bychan, which was invaded by the Anglo-Normans under Richard Fitz Pons who established a caput at Llandovery in 1110-16 (Rees n.d.). It was acquired soon after by the Clifford lords of Brecon as the Lordship of Llandovery. However, there were many episodes of Welsh rule and the area retained native tenurial customs until the end of the Medieval period when it was incorporated into modern Carmarthenshire. The medium-sized irregular enclosures in this area contrast with the larger, regular enclosures to the southeast - which are 19th century enclosure of former common - and are probably earlier, though possibly Post-Medieval. The area contains just three farmsteads, all of Post-Medieval date. There has been little recent development but there are pockets of later 20th century conifer plantation.

Description and essential historic landscape components Garn-wen character area is relatively small but quite complex as it lies between lower-lying farmland and a high unenclosed ridge. It has an 'upland farm' character feel to it. It lies on northwest-facing slopes between 190 m and 200 m. All the land has been enclosed, but fields at higher elevations are now breaking down. Three farms, Gurnos, Garn-wen and Tan-y-lan, lie within the area. The fields, though tending towards the irregular, have a definite northwest-southeast trend to their axes, perhaps indicating a single major episode of enclosure. Field boundaries exhibit a variety of types; dry-stone walls, earth banks and stony banks. The latter two are topped with hedges, which are in various stages of decay; at higher levels they have virtually gone, at lower levels they tend to be overgrown with distinctive hedgerow trees. Dry-stone walls are mostly derelict. Wire fences provide stock-proof barriers. Most land is improved pasture, but a medium-sized conifer plantation has been established over some former fields. Farmhouses are stone-built, probably 19th century, and have a substantial range of 19th century stone-built farm buildings associated with them, as well as very extensive modern agricultural buildings. Only one archaeological site - a palaeolithic findspot - has been recorded, but is important and provides great time-depth. There are no distinctive buildings. Garn-wen is a well defined character area. To the northwest lies either the unenclosed moorland of Carn Goch or lower-lying farmland, while on other sides is a high ridge of unenclosed land, or conifer plantations. K. Murphy & N. Ludlow

SUMMARY

Historic Background A small character area on the northwestern flank of the Black Mountain in the valley of the Afon Sawdde. It was once part of Cwmwd Perfedd of Cantref Bychan which was invaded by the Anglo-Normans under Richard Fitz Pons who established a caput at Llandovery in 1110-16 (Rees n.d.). It was acquired soon after by the Clifford lords of Brecon as the Lordship of Llandovery but retained native tenurial customs until the end of the Medieval period when it was incorporated within the modern Carmarthenshire. The area lay in the further division of Maenor Gwynfe, and within the ecclesiastical parish of Llangadog. The medium-sized irregular enclosures contrast with the larger, regular enclosures to the west - which are 19th century enclosure of former common - and are probably earlier, though possibly Post-Medieval. The area contains two farmsteads, Pen-Arthur and Pen-Arthur-isaf, a subdivision of a larger holding with an interesting name. In addition are two Lletty place-names; the steep-sided valley of the Afon Sawdde is a natural line of communication and the present A4069 was a major Post-Medieval droving route. A pound, and a possible fold, were established around the bridge over the Sawdde at Pont-ar-llechau, which became a place of some importance and occasional venue of the court leets of Myddfai (James n.d., 87). The road was turnpiked from 1779 (Lewis 1971, 43) encouraging further, commercial settlement at Pont-ar-llechau with the establishment of two public houses (both now closed), a tile quarry and a former woollen factory. A second woollen factory formerly lay at the west end of the area at Glandwr. There has been no recent development and the entire area is given over to later 20th century conifer plantation. **Description and essential historic landscape components** Pen-Arthur plantation lies over the eastern end of a ridge, which achieves heights of over 300 m, and covers the steep valley sides of the Afon Sawdde. Prior to afforestation several widely dispersed settlements were present and the whole of the area had been enclosed into medium- and large-sized enclosures. Earth and

earth and stone banks of these enclosures survive under the plantation. Map evidence indicates that several dwellings survive in small clearings in the forestry - these were not examined in this study. The A4069/former turnpike runs down the Sawdde valley and so passes through this area. Apart from these early landscape elements, most of the historic components comprise tracks, drives and other features associated with the forestry. Recorded archaeology provides the landscape with great time-depth comprising a possible Neolithic chambered tomb and an Iron Age hillfort, in addition to the Post-Medieval woollen factory sites and tile quarry. There are no distinctive buildings but the former Three Horseshoes and Coopers Arms public houses at Pont-ar-llechau, adjacent to the former turnpike toll house, bridge, pound (and a sheepfold?), should be noted for historical value. This area of forestry plantation is well defined by the neighbouring enclosed farmland and by semi-open high ground. K. Murphy & N.Ludlow

SUMMARY

Ring barrow approximately 14m diameter and 0.3m high.

DESCRIPTION

A ring barrow lying in pasture at 320m commanding panoramic views to the west-northwest through to the east. The diameter of the barrow is approximately 14m with the encircling ring c.1m wide and standing to c.0.3m high. The uneven central area indicates that some infilling has taken place, but otherwise the monument is in good condition. A small round barrow lies 10m to the southeast (112151) and a slight earthwork lying 60m due west and partly under a field wall may be the site of a second ring barrow (47384. K Murphy April 2018

OTHER SOURCES

PRN 64180 **NAME** Cwm Gwyn Bach
TYPE Farmstead **PERIOD** POST MEDIEVAL
NGR SN70862284 **COMMUNITY** Llangadog
CONDITION DAMAGED, NEAR DESTROYED **STATUS** *None recorded* **EVIDENCE** COMPLEX, Documentary Evidence

SUMMARY

Ruined farmstead shown on 1st edition OS map. The map shows a rectangular N-S aligned two cell structure presumed to be the farmhouse with attached agricultural building. There is a second building at right angles to this. The whole sits within an enclosed yard/garden plot. The footprint of the buildings are shown on modern mapping (Mastermap 2011) indicating that some remains survive. Recent aerial photographs (Next perspectives, 2009) show the area to be shrouded with mature trees. (H.Pritchard,2015)

DESCRIPTION

The farmstead of Cwm-gwyn bach survives as ruined stone walls, standing to a height of between 1 - 1.5metres. The layout of the buildings and the associated trackway are clear. It stands within some mature trees. A Pyper June 2018.

SUMMARY

Part of the toll road from Ffairfach to join the road from Llangadog to Brynamman. Managed by the Llandovery and Llangadog Trust.

DESCRIPTION

The Llandovery and Llangadog Trust was founded by Act of Parliament in 1779 to turnpike the road through Llangadog, over the Black Mountain to Brynannan. This stretch of the road runs between Glan -Towy and Rhydysaint & Bont Fawr. The stretch from Glan-Towy to Ffairfach was managed by the Llandeilo & Llandybie Trust.

SUMMARY

A prehistoric ring barrow consisting of a circular low earthwork bank. A Pyper June 2018

DESCRIPTION

An earth and stone ring, with a bank reaching c0.5m high and around 20m in circumference. A large quantity of loose stone is collected in a crescent shape around the southeastern side of the monument. The monument lies just below and on the southeast side of the ridgetop on a slight slope to the southeast. Extensive views lie to the southeast towards Mynydd Du. A linear stone and earth field boundary skirt the monument to the northwest, and some of the loose stone may have been built into this later feature. A very well defined monument which lies in permanent pasture. A Pyper 2018.

CONDITION DAMAGED **STATUS** *None*

recorded **EVIDENCE** RUINED BUILDING

SUMMARY

A stone building recorded on the tithe map, survives as a roofless ruin. A Pyper June 2018.

DESCRIPTION

The building is positioned down-the-slope, the corners, with well-built stone quoins still survive to roof height, though the downslope gable end has collapsed, and the NE lateral wall has largely collapsed. The southwest facing lateral wall is largely surviving to roof plate height and the upslope gable end also survives although is overgrown. Above the ruin is a levelled overgrown area which suggests there may have been a further structure at the upper end. No surviving openings are visible except on the north east wall where a door jamb at the upper end survives. When visited it was overgrown and not fully accessible. A Pyper June 2018 Cottage, or possibly a field barn, marked but not named on OS 1887 & 1906. Marked in outline on current OS mapping. Recent APs show walls surviving, roofless oblong building, divided in two internally. JS from H. Whitear 2016-17

Appendix II: Gazetteer of newly identified sites

Appendix II: Gazetteer of new sites

ID	TAN01
Name	Holloway east of Tan-y-lan
Summary	Holloway
Welsh Summary	Ffordd ceudod
Description	A short section of holloway running from the farmyard to access the fields in the west of the farm. It has high banks topped with a hedgerow to either side
NGR	SN6992323829
Eastings	269923
Northing	223829
Type	Holloway
Period	Medieval/Post-Medieval
Survival condition	Intact
Condition Rating	Good
Broad Class	Transport
Evidence	Site visit
Record compiled by	Charley James-Martin
Record compiled on	24/02/23
Copyright	Archaeology Wales

ID	TAN02
Name	Holloway south of Tan-y-lan
Summary	Holloway
Welsh Summary	Ffordd ceudod
Description	Runs roughly north-east to south-west across the site to the south of Tan-y-lan. This route is depicted on the Tithe, and formed part of a circular route joining former farmsteads in the area
NGR	SN7017523858
Eastings	270175
Northing	223858
Type	Holloway
Period	Medieval/Post-Medieval
Survival condition	Intact
Condition Rating	Good
Broad Class	Transport
Evidence	Site visit and Tithe
Record compiled by	Charley James-Martin
Record compiled on	24/02/23
Copyright	Archaeology Wales

ID	TAN03
Name	Holloway south of Careg-y-gath
Summary	Holloway
Welsh Summary	Ffordd ceudod
Description	Ran south-west from the farmstead, presumably to provide access to fields to the south. It has banks of large rubble stone line with mature trees
NGR	SN6988524560
Eastings	269885
Northing	224560
Type	Holloway
Period	Medieval/Post-Medieval
Survival condition	Intact
Condition Rating	Good
Broad Class	Transport
Evidence	Site visit
Record compiled by	Charley James-Martin
Record compiled on	24/02/23
Copyright	Archaeology Wales

ID	TAN04
Name	Field system around Tan-y-lan Farm
Summary	Field System
Welsh Summary	System gaeau
Description	Small, irregular pasture fields, located on the lower valley slopes around the farm
NGR	SN7007623943
Eastings	270076
Northing	223943
Type	Field System
Period	Medieval/Post-Medieval
Survival condition	Intact
Condition Rating	Good
Broad Class	Agriculture and subsistence
Evidence	Tithe, OS County Series, aerial photographs, and site visit
Record compiled by	Charley James-Martin
Record compiled on	24/02/23
Copyright	Archaeology Wales

ID	TAN05
Name	Southern field system
Summary	Field System
Welsh Summary	System gaeau
Description	Enclosed field system, formerly part of the upland common on Banc Celynog until they were enclosed in the 19 th century
NGR	SN7041823552
Eastings	270418
Northing	223552
Type	Field System
Period	Post-Medieval
Survival condition	Intact
Condition Rating	Good
Broad Class	Agriculture and subsistence
Evidence	Tithe, OS County Series, aerial photographs, and site visit
Record compiled by	Charley James-Martin
Record compiled on	24/02/23
Copyright	Archaeology Wales

ID	TAN06
Name	Field system around Careg-y-gath
Summary	Field System
Welsh Summary	System gaeau
Description	Field system around the former Careg-y-Gath farmstead. These are very small, irregular pasture fields which could be of prehistoric origin. The field boundaries are banks constructed from large rubble stones with occasional mature trees along them
NGR	SN6996124628
Eastings	269961
Northing	224628
Type	Field System
Period	Medieval or potentially prehistoric
Survival condition	Intact
Condition Rating	Good
Broad Class	Agriculture and subsistence
Evidence	Tithe, OS County Series, aerial photographs, and site visit
Record compiled by	Charley James-Martin
Record compiled on	24/02/23
Copyright	Archaeology Wales

ID	TAN07
Name	Cultivation Ridges
Summary	Cultivation ridges
Welsh Summary	Cefnoedd amaethu
Description	What appear to be cultivation ridges were evident across a large number of fields. They were not identified during the site visit but were visible on the LiDAR data. Possibly the remains of medieval ridge and furrow ploughing.
NGR	SN7028523939
Eastings	270285
Northing	223939
Type	Cultivation Ridges
Period	Medieval
Survival condition	Unknown
Condition Rating	Unknown
Broad Class	Agriculture and subsistence
Evidence	LiDAR data
Record compiled by	Charley James-Martin
Record compiled on	24/02/23

Appendix III: Tithe Apportionment

Appendix III – Tithe apportionment

Farm	Owner	Occupier	Field no.	Field name	Translation (Cae =Field)
Frachtenfelin or Brachenfelin	John William Lloyd	Thomas Morgan	511	Cae cetting or betting	Word found in other places as a field name, no translation found.
			512	Cae pistill	Well, waterfall or spout
			513	Cae ysgubor	Barn, Granary
			514	Waun dau ty	heath, moorland, meadow, lea two houses
			515a	wood	-
			515	Cae waun ??	heath, moorland, meadow, lea
			516	Waun y Caru	The heath, moorland, meadow, lea of love?
			517	Cae y ffynon crydd isaf	Lower field of the well/spring of the cobbler/shoemaker
			518	Cae ffynon crydd uchaf	Upper field well/spring of the cobbler/shoemaker
			519	Waun fach	Small heath, moorland, meadow, lea
			520	Waun Ganol	Middle heath, moorland, meadow, lea
			521	Cae wrth cefn yr ardd	Field by the rear of the garden
			522	Buildings	-
			523	Cae wasty	Gwas , which could be flat(topography) or male servant the ty could be house.
			524	Coed cae uchaf	Upper woods field
			525	Coed cae bach	Small woods field
			526	Coed bach isaf	Lower woods field
			527	Cae bach	Small field
			529	Cae Canol	Middle field
			534	Cae bedw mawr	Field of a/the large birch
			535	Cae Gwndwn Gwyn	Field of ? white
			536	Cae y Garn	Possible rough field or deer field?
			537	Cae Gwndwn Gwyn	Field of ? white
			538	Cae Gwndwn Gwyn	Field of ? white
			539	Cae Gwndwn Gwyn uchaf	Upper Field of ? white
			540	Glan?	Shore of something?
Carreg Gath	John William Lloyd	John and William Rees	541	Lan Fawr	Lan may be parish, up, or bank(natural), Fawr is large
			542	Cae lan uchaf	Upper ? field

Farm	Owner	Occupier	Field no.	Field name	Translation (Cae =Field)
			543	Cae lan isaf	Lower parish, up, or bank
			543a	Cae lan fawr	Large parish, up, or bank
			544	Cae bach gwlanog	Little woolly field
			545	Llandi gwlanog/ Handi Gwlanog	May me misspelling to dy, could be llan ty which would be parish house? Gwlanog is woolly
			546	cottage	
			547	Waun dauty or dau ty	heath, moorland, meadow, two houses
			548	Cae wair Uchaf	Upper Mary or grass/hay field, spelling unclear
			549	Cae Rhyn mawr	Large Rhyn(name)-unclear
			550	Cae Llwyn	shrub, bush, grove, copse
			551	Cae waun y wern	heath, moorland, meadow, lea of the Alder or Swamp
			552	Cae maen isaf	Lower stone field
			557	Cae clawdd newydd	New dyke, hedge, ditch, gutter
			558	waun	heath, moorland, meadow, lea
			564	Cae mawr	Big field
			565	Cae llwy Bedw	Birch spoon field, could be misspelling
			566	Cae Adman/admau llwyd	? Gray
			567	Coe cae	Woods field
			568	Y wern	Alder/ Swamp
			569	Waun dauty	heath, moorland, meadow, lea two houses
			572	Cae'r Ydlau	Could be Ydlan which is rickyard
			573	Buildings	
			574	Plot	
			575	Cae ffynon	Fountain, spring field
			576	Brushwood?	
			577	Cae'r garw?	Rough field?/ deer field Exact spelling unclear
			578	Cae Ysgybor	Barn
			579	Carn fach	Small cairn/ tumulus/hoof/handle
			853	Cae Pistle?	Pistle? Could be pistyll which is Well, waterfall or spout
			853a	Roads ?/	
			858	Cae llwyn	shrub, bush, grove, copse

Farm	Owner	Occupier	Field no.	Field name	Translation (Cae =Field)
Garnwen	William Chamber	David Thomas	859	Cae Lan Ganol	Middle Lan may be parish, up, or bank(natural),
			861	Y lan uchaf	The Upper Lan may be parish, up, or bank(natural),
			502	Croft	
			503	Plot	
			504	Godre	Bottom, edge outskirt
			505	Croft	
			506	Cae Cwm	Valley field
			507	Cae'r eithin	Gorse/Furze field
			508	Cae Llwyn	shrub, bush, grove, copse field
			509	Cae Canol	Middle field
			510	Cae Uchaf	Upper field

Appendix IV: Written Scheme of Investigation

**Specification for an
Archaeological Desk Based Assessment
at
Tan y Lan Farm, Bethlehem**

**Prepared for:
Peter Solly**

Project No: 3070

February 2023

Contents

1. Introduction.....	2
2. Development Details & Site Description	2
3. Objectives	2
4. Method Statement for a Desk-Based Assessment.....	3
5. Resources & Timetable.....	6
6. References.....	7

Figure 1. Location of development showing the Registered Historic Landscapes, Historic Landscape Characterisation Areas and the Scheduled Monuments

1. Introduction

- 1.1. This specification details the proposal for an archaeological Desk-Based Assessment associated with proposed woodland creation at land at Tan y Lan, Bethlehem, Carmarthenshire SA19 9DR (NGR SN 70144 23871).
- 1.2. This specification has been prepared by Charley James-Martin, Project Manager, Archaeology Wales Ltd (henceforth – AW). It provides information on the methodology that will be employed by AW during a Desk Based Assessment and Site Visit.
- 1.3. All work will conform to the Standard and Guidance for Archaeological Desk Based Assessment (CIfA, 2020) and be undertaken by suitably qualified staff to the highest professional standards.

2. Development Details & Site Description

- 2.1. The proposed development site encompasses an area of approximately 70 hectares (ha). The site is located on an area of higher ground approximately 6.5km to the east of Llandeilo and 4.5km to the south of Llangadog, centred on NGR SN 70144 23871.
- 2.2. The site and surrounding landscape is rural in nature and is characterised by enclosed field systems and isolated patches of woodland. Immediately adjacent to the site are the Scheduled Monuments of Garn Goch (CM037), Trichrug Cairns (CM327); both within 500m of the site as well as within the Character Area of Garn-Wen of the Registered Landscape of Outstanding Historic Interest Tywi Valley (HLW (D) 5).
- 2.3. The purpose of the proposed Desk-based Assessment is to provide Dyfed Archaeological Trust - Heritage Management (henceforth – DAT-HM) with information on the potential impacts upon the setting of the adjacent Scheduled Monument of Carn Goch (CM037) and nearby monuments of Trichrug (CM 327), as well as views of the proposed planting site into the Registered Historic Landscape of the Tywi Valley (particularly from the rights of way) and views from the Registered Historic Landscape (for instance on the other side of the valley) back across to the planting site. It is also intended to consider any other potential for unrecorded archaeological remains (buried and upstanding) to ensure that they are adequately preserved or fully investigated and recorded if they are disturbed or revealed as a result of subsequent activities associated with the development.

3. Objectives

- 3.1. The primary objective of the desk-based assessment will be to assess the potential impact of the development proposals on the historic environment by means of a detailed desk-based study and site visit. This will help inform future

decision making, design solutions and potential mitigation strategies. The aim will be to make full and effective use of existing information in establishing the archaeological significance of the site, to elucidate the presence or absence of archaeological material, its character, distribution, extent, condition and relative significance.

- 3.2. The work will include a comprehensive assessment of regional context within which the archaeological evidence rests and will aim to highlight any relevant research issues within national and regional research frameworks.
- 3.3. This desk-based assessment will result in a report that will provide information of sufficient detail to allow informed decisions to be made which can safeguard the archaeological resource. The information could then be used to determine further archaeological investigation or appropriate mitigation strategies for any archaeological remains within the area to be implemented prior to or during the proposed development. Preservation in situ will be advocated where at all possible, but where engineering or other factors result in loss of archaeological deposits, preservation by record will be recommended.
- 3.4. Specific objectives and considerations for this assessment include:
 - a) the setting of the adjacent Scheduled Monument of Carn Goch (CM037) and nearby monuments of Trichrug CM 327 – other undesignated prehistoric sites have also been identified nearby and are recorded on the HER,
 - b) views of the proposed planting site into the Registered Historic Landscape of the Tywi Valley (particularly from the rights of way) and
 - c) views from the Registered Historic Landscape (for instance on the other side of the valley) back across to the planting site.
 - d) any other potential for unrecorded archaeological remains (buried and upstanding).

The assessment will be guided by, but not formally adhere to, *Setting of Historic Assets in Wales* (Cadw, 2017) and *Guide to Good Practice on using the register of Landscapes of Historic Interest in Wales in the Planning and Development Process* (Cadw & CCW, 2007).

- 3.5. Following an assessment of the potential impacts, recommendation will be made to mitigate the potential effects of the proposed development.

4. Method Statement for a Desk-Based Assessment

- 4.1. The assessment will consider the following:

- e) The nature, extent and degree of survival of archaeological sites, structures, deposits and landscapes within the study area. It will involve the following areas of research:
 1. Collation and assessment of all relevant information held in the regional HER at the Dyfed Archaeological Trust, within a 1km buffer zone around

- the proposed development area.
2. Collation and assessment of the impact on all Designated archaeological sites (Scheduled Ancient Monuments, Listed Buildings, Historic Parks & Gardens, landscapes, Conservation Areas) within 3km buffer zone around the proposed development area.
 3. Assessment of all available excavation report and archives including unpublished and unprocessed material affecting the site and its setting.
 4. Assessment of all extant aerial photographic (AP) evidence. This will include visits to Central Register of Air Photography for Wales, in Cardiff.
 5. Assessment of archive records held at the County Archives, and as appropriate, site files held by RCAHMS
 6. Records held by the developer e.g. bore logs, geological/geomorphological information, aerial photographs, maps, plans.
 7. Map regression analysis using all relevant cartographic sources e.g. All editions of the Ordnance Survey County Series, Tithe and early estate maps (as available).
 8. Place name evidence.
 9. Internet sourced satellite imagery and Lidar imagery as available.
 10. Assessment of the records held at the Portable Antiquities Scheme.
 11. Historic documents (e.g. Charters, registers, estate papers).
- b) The significance of any remains in their context both regionally and nationally and in light of the findings of the desk-based study.
- c) The history of the site, based on the areas of research outlined above.
- d) The potential impact of any proposed development on the setting of known sites of archaeological importance (this will constitute a brief assessment, rather than a formal assessment such as that detailed in the Design Manual of Roads and Bridges).
- e) The potential for further archaeological remains to be present, which have not been identified in pre-existing archaeological records.
- f) The potential for further work, with recommendations if requested and where appropriate for a suitable investigative and/or mitigation methodology.

Site Visit

- 4.2. The site visit will be a visual walked search of the accessible development area. The ground surface will be visually inspected for all earthworks, structures and finds. The location of any environmental archaeological deposits, or areas which may have a potential for such deposits, will also be taken into account along with the visible archaeology.
- 4.3. All located sites or finds will be accurately fixed by means of GPS. Each individual find or site location will have an accurate NGR reference attached. Where a close cluster of related features is identified a single NGR for the centre of the cluster will be used, and each constituent feature separately described in the text.

- 4.4. The character, function, condition, vulnerability, potential dating and relationship to other features of each identified site or find will be described fully. The importance of the site or find will be assessed in terms of local, regional or national significance.
- 4.5. Written, drawn and photographic records of an appropriate level of detail will be maintained throughout the course of the project. Digital photographs, including scales, will be taken using cameras with resolutions of 10 mega pixels or above.
- 4.6. The site visit will also assess the visual impact of the proposed development on the setting of known sites of archaeological importance. Photographs will be taken from the proposed development to help illustrate and assess this visual impact and Designated sites within the study area will also be visited with photographs taken towards the proposed development to help illustrate and assess this visual impact on these sites.
- 4.7. The wider landscape will be visited and views of the proposals considered, in particular, long distance view from the surrounding Registered Historic Landscapes.

Report and the Deposition of the Site Archive

- 4.8. A report will be produced which synthesises the results of the desk-based assessment and site visit and thereby assesses the total archaeological resource within the development area.
- 4.9. The results will be presented in a report and will be detailed and laid out in such a way that data and supporting text are readily cross-referenced. The report will adhere to the Welsh Archaeological Trust's joint Guidance for the Submission of Data to the Welsh Historic Environment Records (2022). The historical development of the site will be presented in phased maps and plans comprising clearly, the outline of the site.
- 4.10. Within the report an attempt will be made to indicate areas of greater or lesser archaeological significance and the sites will be ranked in level of overall archaeological importance (locally, regionally and nationally).
- 4.11. All relevant aerial photographs, re-plots and historic maps will be included and be fully referenced.
- 4.12. The report will specifically include the following:
 - a copy of the design brief (if applicable)
 - a location plan
 - all identified sites plotted on an appropriately scaled plan of the proposal site
 - a gazetteer of all located sites
- 4.13. Copies of the report will be sent to the client and to DAT for inclusion in the HER. Digital copies will be provided in pdf format.

The Site Archive

- 4.14. A project archive will be prepared in accordance with the National Monuments Record (Wales) agreed structure and be deposited with the National Monuments Records, held and maintained by the RCAHMW, Aberystwyth, on completion of the report. It will also conform to the guidelines set out in 'The National Standard and Guidance to Best Practice for Collecting and Depositing Archaeological Archives in Wales 2017' (National Panel for Archaeological Archives in Wales 2017). The digital archive will be deposited with the NMR.
- 4.15. Although there may be a period during which client confidentiality will need to be maintained, the report and the archive will be deposited not later than six months after completion of the work.

5. Resources & Timetable

Standards

- 5.1. The desk-based assessment will be undertaken by AW staff using current best practice. All work will be undertaken to the standards and guidelines of the ClfA.

Staff

- 5.2. The project will be undertaken by suitably qualified AW staff. Overall management of the project will be undertaken by Charley James-Martin – project manager, AW (MCIfA).

Timetable of archaeological works

- 5.3. The work will be undertaken at the convenience of the client and is likely to commence imminently.

Insurance

- 5.4. AW is fully insured for this type of work and holds Insurance with Aviva Insurance Ltd and Hiscox Insurance Company Limited through Torgate Insurance. Full details of these and other relevant policies can be supplied on request.

Arbitration

- 5.5. Disputes or differences arising in relation to this work shall be referred for a decision in accordance with the Rules of the Chartered Institute of Arbitrators' Arbitration Scheme for the Institute for Archaeologists applying at the date of the agreement.

Health and safety

- 5.6. All members of staff will adhere to the requirements of the Health & Safety at Work Act, 1974, and the Health and Safety Policy Statement of AW.
