

Mapped here with the OS opensource District Data. As you can see it adjoins the existing Teifi Marshes reserve.

The pylons are relatively small, not big enormous ones so hopefully could be incorporated nicely into open space / rides with some shrub planting in the immediate environment.

I have extracted the bits that are currently covered in existing woodland along the watercourses and the triangular field on the east side.

It comes down to about 21ha of area (the light green planting bit on this map) of the total site of 23.92ha.

All low-lying between sloping from 30 – 10m south to north.

Just wondering if some wetter tolerant species might be needed here? Will have a look at the ESC.
