

Cyllie Site + Draft Tree Planting Plan

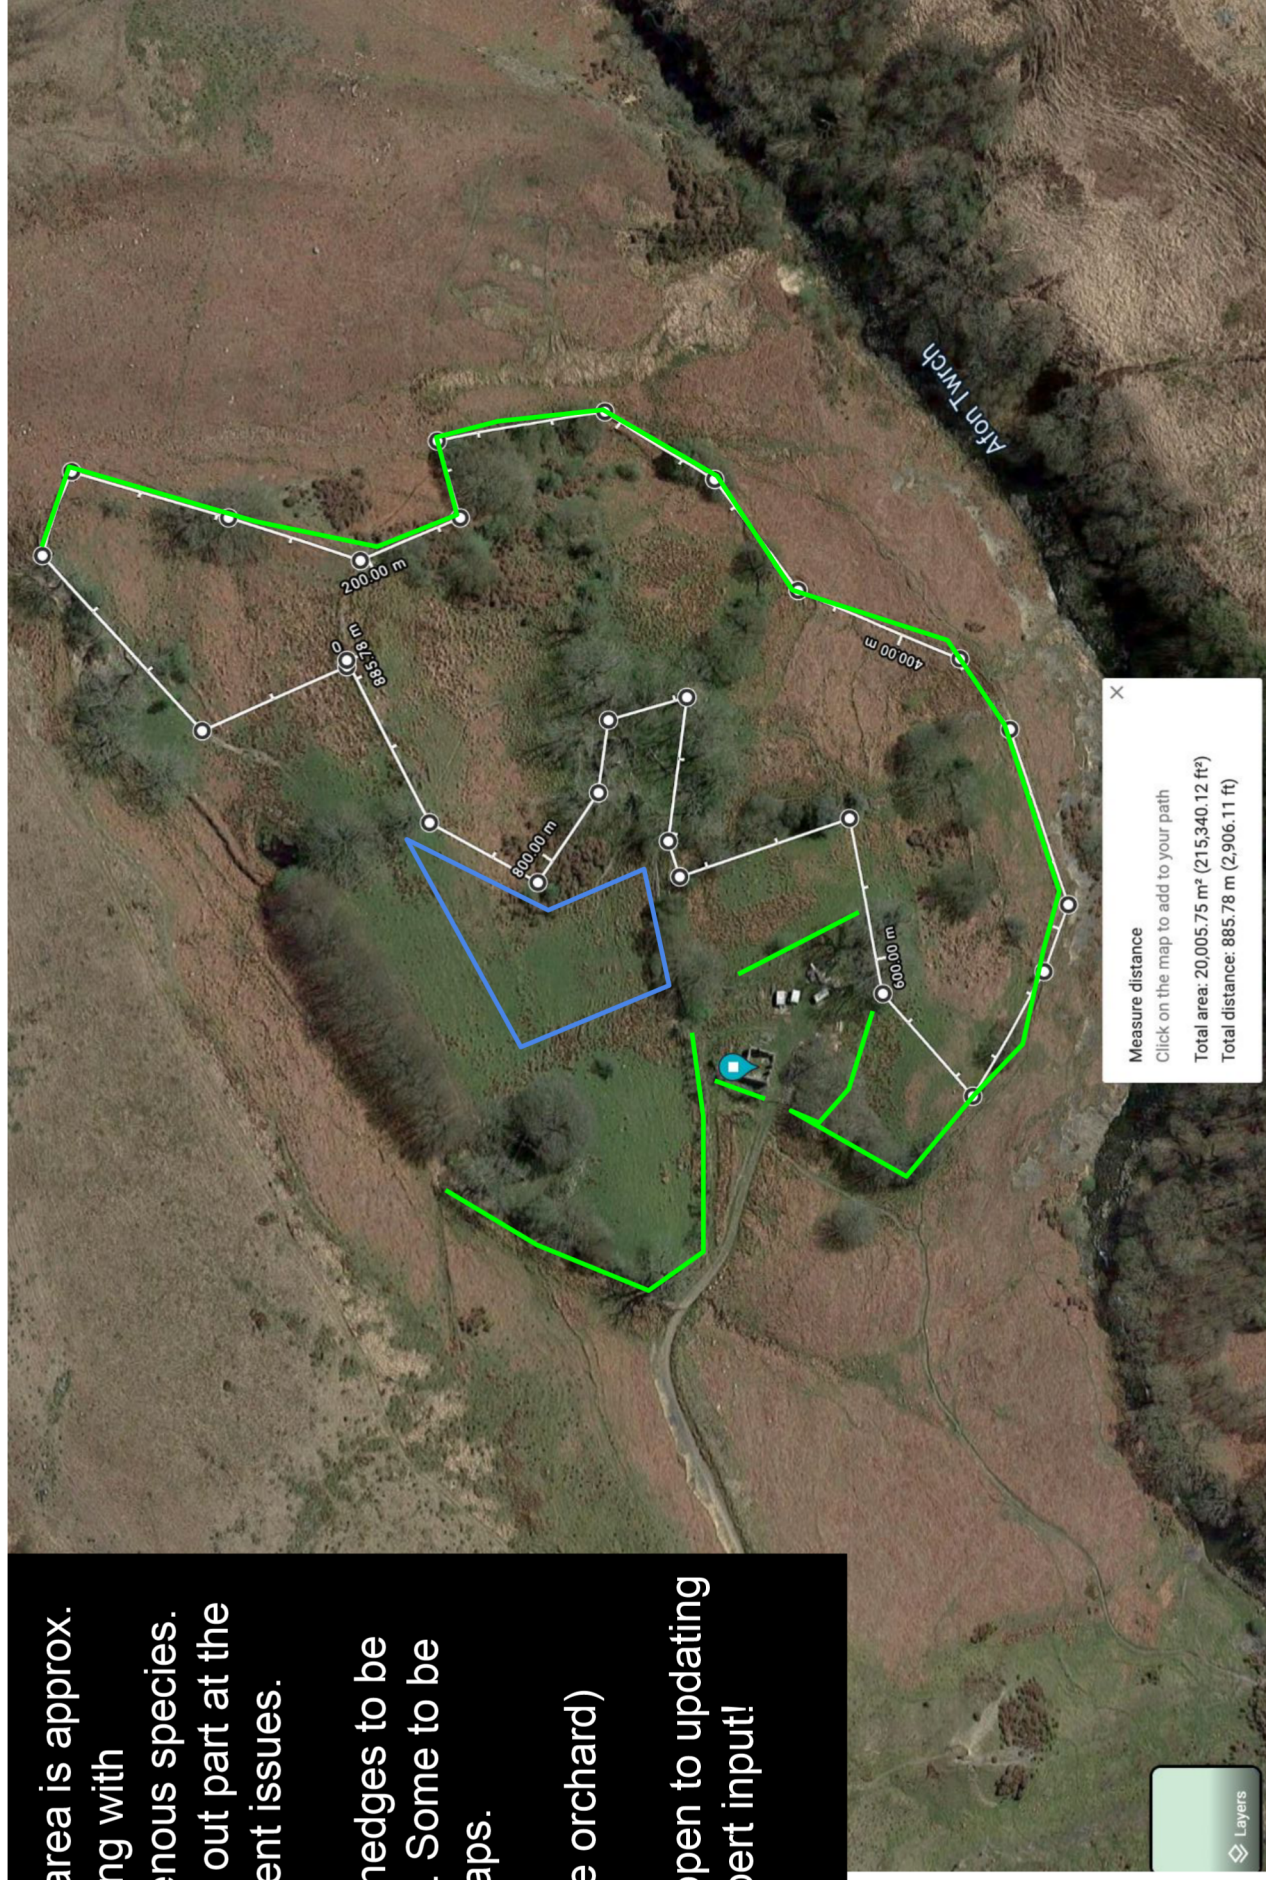

NB. We only recently purchased site so pictures show it 'as bought', and it's messy -
don't judge us too harshly :-)

- White bounded area is approx. 2 Ha for re-foresting with appropriate indigenous species. May need to miss out part at the top if acid catchment issues.

- Green lines are hedges to be renewed/repaired. Some to be laid one day perhaps.

- (Blue line is to be orchard)

These plans are open to updating once we have expert input!

Good overview photo - the parts of our site we wish to plant trees on are currently bracken and rush, some overgrown hedging trees (few, if any, standards), and a little grass from the sheep that have been sneaking in. The slither of old growth forest is visible on other side of valley (not ours - we wish to compliment it on our side of valley which is currently very bare).

Another part of the land. In total we'd like to re-forest about 2 Ha

And another... this is actually the (designated) 'acid catchment' area at the top
