NOTES.Prn: SA031

Aqueduct and weir carrying canal over Lower Clydach river. Late C18 origins. Local stone with dressed stone coping. Shallow segmental arch with mass construction stone elevations and rounded string course. Canal weir built under towpath on either side with metal girder supports and stone dressings. Parapet on south side with dressed stone coping and later metal parapet rail. A very unusual design combining aqueduct with excess canal water disposal. Of great interest and innovation. Group value with footbridge.
