Description (free text)

1. Buildings on a platform, almost certainly a long house. Building narrow in relation to length. Walls show as earthen banks - no real stone visible but probing would no doubt show differently. Various gaps in long side, but one (in SW corner) more likely to be entrance than others. Back wall (SE) largely disappeared. Front wall (NW) high with apron to give pronounced rise, above footpath to W. Fen is distinctive, masonry with a narrow base running down from above.

2. Description is similar to 1) but not so well defined. Side walls of building are incomplete. This is particularly true of NW, but SW side also fragmentary. Again back wall not complete while front wall (NW) well built up and masonry with apron. Fen quite slight.

Note alignment of two buildings may be considerably different. Main axis because is for the larger building a gap in the intervening earthen bank might be original?

Building on a steep N slope only slightly. Behind the ground
 rises to ridge with outcrops, and the base of the slope - which
 for the fans is east (NW) ground slightly steeper but becoming
 progressively steeper.
 Excellent views into valley.

Type	Location	Associated features
Structure other later contemporary	Constructed dry-stone orthostatic outbank	field clearance ridge + narrow (shallow) field walls
		faceted garden entrance found
		other

Description (text)

The structure is a simple rectangular building with a low wall. The ground
 rises to ridge with outcrops, and the base of the slope - which
 for the fans is east (NW) ground slightly steeper but becoming
 progressively steeper.

Excellent views into valley.

Site name _____ PRN _____

Low Med High

DISCRIMINATION CRITERIA

1.	Documentation, archaeological	L
LOW	- Brief description/annotated sketch survey	
MEDIUM	- full description and measured survey	
HIGH	- Description, survey and some published excavation	
2.	Documentation, historical	L
LOW	- no such documentation	
MEDIUM	- a single relevant document	
HIGH	- two or more relevant documents	
3.	Group Value, association	H
LOW	- < 2 other assoc. period/function site type within 1 km	
MEDIUM	- 2-5	
HIGH	- > 5	
4.	Group Value, clustering	H
M	- < 2 similar site type within 1 km	
MEDIUM	- 2-5	
HIGH	- > 5	
5.	Survival	H
LOW	- less than one-third of the original site area left	
MEDIUM	- between one- and two-thirds of the original site area left	
HIGH	- over two-thirds of the original site area left	
6.	Diversity, features	M → H
LOW	- < 6 features	
MEDIUM	- 6 - 12 features	
HIGH	- > 12 features	
7.	Potential	H?
LOW	- Internal and external floors disturbed or destroyed	
MEDIUM	- Int. and some ext. floors preserved	
HIGH	- Int. and extensive ext. floors preserved/ind. activity/organic pres.	
8.	Amenity Value	M
LOW	- Remains not visible, mutilated or hidden	
MEDIUM	- Remains visible but not easily understood by layman	
HIGH	- Remains easily visible and understandable	

MANAGEMENT CRITERIA

1.	Condition	G
POOR	- Poorly maintained, serious problems of neglect/damage	
MEDIUM	- Moderately well-maintained, signs of neglect, but capital works not required	
GOOD	- site is well-managed, no immediate need for capital works	
2.	Fragility	M
LOW	- Stone-built site grassed-over or obscured by stone dumping and well-protected	
MEDIUM	- More robust earthwork, stone-built site partially grassed-over/ covered by stone-dumping etc	
HIGH	- Low earthwork site, exposed banks/walls, unstable faces and features on stone-built sites	
3.	Vulnerability	L
LOW	- Stable land-use, sympathetic owner, slight/no threat value	
MEDIUM	- Stable land-use, possible longer-term threat value	
HIGH	- Unsympathetic land-use, high potential (immediate) threat value	
4.	Conservation Value	M
LOW	- No added floral/faunal interest	
MEDIUM	- Floral/faunal interest present but not outstanding	
HIGH	- Floral/faunal interest high, compared with surrounding area
